Task list for (G) Information on the attainment of environmental objectives (Article 12)

This page contains the TODO list for all users working in this collection. First, this gives you an overview of what tasks you can work on next: If there is no user assigned to an envelope, click on the envelope's link and activate the task which is awaiting assignment. Secondly, if you've already started work in an envelope by activating a task, look for your username in the list below to find the link to the envelope.

Note: remember the first task reporters have to do in order to start the delivery on this website is to create the envelope. Such tasks do not appear in the list below.

Coverage	Envelope	Task	Status	User	Reporting date
Norway	retro-2015-v1	Final feedback	inactive	Not assigned	2016-10-05 13:45

4. Release envelope or delete file(s), if envelope is to be deleted, also remember to delete the envelope

5. If envelope is to be released follow the [Submission procedures for reporting to Eionet CDR](#)

Deadline for the cleaning: 1 week after the 5th IPR Technical meeting scheduled to take place end of October or start of November.

Old envelopes in draft after this date will be deleted!

Correction of data

Resubmit the corrected data. The new data will overwrite the previous ones.

Deletion of data

Resubmit with data = -999 and with validity flag = -1. By doing so, these “deleted” data won’t be used for any further processing including aggregation and statistics calculation.

Deletion of sampling point and associated time series

Remove the meta information (Sampling Point and Observing Capability) associated to the time series in D. The corresponding data in E1a will become “orphan” in the air quality e-Reporting system and then will not be used for any further processing and use.

Automatic conversion

Data are stored as reported but statistics are converted into recommended UOM if necessary e.g. from mg/m³ to µg/m³.

But pay attention to

the coherence between values and UOM reported e.g. values in µg/m³ but UOM is mg/m³.

Thank you for your attention!
