

Information note

Additional checks on CDR in 2018

Since the adoption of the Decision 2011/850/EU and the implementation of detail QA/QC check on both structure and content, CDR system has achieved stability and it is fit for purpose.

For reporting 2017 data-flows B to G (submission September 2018), no major changes are expected. Modifications and improvements to be included might cover:

- Correction of small bugs on cross-checks
- Improvements on reported E1a data
 - Outlier checks to be done country specific (if range differs)
 - Warnings on checks presently performed by E1aTier 2 tool
 - Full data series is invalid (vality flag -1)
 - Annual mean (P1Y) 0 or negative
 - Annual mean (P1Y) is 1/3 of previous year
 - Annual mean (P1Y) is 3 times of previous year
 - ...
- Improvements on dataflow D to ensure full reporting (compared to previous deliveries)

Other possible improvements:

- When reporting G, ensure that full E1a and E1b have been reported.
