1 Objectives and structure

This work is framed in Task 1.7.5.B.III.iv of ETC/BD Action Plan 2015, which aims at “preparing documentation on the integration of European Forests Types in EUNIS Habitat Classification (context, method and guidelines to use)”. European Forest Types (EFTs) and EUNIS, whose main characteristics are introduced in Table 1.1, are habitat classifications developed for different objectives. The primary goal of the European Forest Types (EFTs) is “to improve the MCPFE reporting on Sustainable forest management (SFM) in Europe, with special regard to forest type based SFM indicators”. The EUNIS habitat classification is “a comprehensive pan-European system to facilitate the harmonised description and collection of data across Europe through the use of criteria for habitat identification”. The EUNIS classification is structured in 7 levels. The EUNIS Forest Habitats are those included in “G Woodland, forest and other wooded land” up to Level 3, along with the class “B1.7 Coastal dune woods”. In spite of their different purposes and approaches, crosswalks between their habitats have been produced, highlighting their similarities.

Table 1.1 The EFTs and EUNIS classifications in a nutshell

This report aims at gathering and synthesizing the relevant information on EFTs and EUNIS Forest Habitats produced to the date to make the published crosswalks more operational. In particular, the document aims to present information on the EUNIS Forest Habitats in a synthesized and condensed way by means of factsheets.

The structure of the report is as follows. Firstly, it provides an overview of both European forest habitat classifications (Chapter 2 for EFTs and Chapter 3 for EUNIS), briefly presenting their primary goals, history, classification structure and main characteristics. Specifically, it highlights the EUNIS characteristics that could be considered attractive for those EFT users willing to take advantage of the crosswalk. Furthermore, complete lists of the EFTs and the EUNIS habitats up to the Level 3 are provided in Annex 1 and Annex 2 respectively. Chapter 4 focuses on the actual crosswalks between both classifications. Firstly, a comparison between their main characteristics is established in order to remark potential benefits to EFT and/or EUNIS users. Secondly, the actual links between types are presented in two annexes supported by explanatory guidelines. Annex 3 shows the linkages from EFTs to EUNIS in a comprehensive table. Annex 4 is comprised by 67 factsheets corresponding to all levels up to the third of EUNIS Forest Habitats, also showing their links to EFTs. The discussion section mainly reflects on the potentiality of using the crosswalk.

2 European Forest Types (EFTs)

Forest Europe (i.e., The Ministerial Conference on the Protection of Forests in Europe, MCPFE) is the pan-European political process addressing all dimensions of Sustainable Forest Management (SFM) in Europe. It develops common strategies for its 46 member countries and the European Union on how to protect and sustainably manage forests (http://www.foresteurope.org/about_us/foresteurope, last accessed 17th August 2015). With the aim at improving the MCPFE reporting on sustainable
forest management in Europe, an international consortium of experts developed the European Forest Types (EFTs). They were originated from a comprehensive review of a proposal conceived for optimising large scale monitoring of forest biodiversity condition in EU-25 countries (Barbati and Marchetti, 2004), based on the earlier proposal of Forest Types for Biodiversity (BEAR Project, Larsson 2001).

The EFT typology is specially designed to be a user-friendly classification for forest type based SFM indicator reporting. In particular, seven MCPFE sustainable forest management indicators need to be reported by forest types: forest area, growing stock, age structure/diameter distribution, forest damage, tree species composition, naturalness and deadwood.

The classification was originally 14 Categories subdivided into 75 Types, which are described in the report “European forest types, Categories and types for sustainable forest management reporting and policy” (EEA, 2006). A second edition of this report (EEA, 2007) changed some names and descriptions. An adopted revision by UNECE/FAO (2010) added 3 further new types, split one original type into two and integrated one original type into another. A table with the changes between 2006 and 2010 can be seen in Evans (2013). As a result of these changes, the current typology is structured in 14 Categories and 78 Types. An overview of these categories and types, together with categories’ descriptions, are displayed in Annex 1.

It should be noted that the classification applies only to forest land as defined in FAO (2004) and growing in MCPFE countries (see Box 2.1). Other wooded lands are not covered by the classification.

**Box 2.1 The FAO definition of forest land**

“Land spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of more than 10 percent, or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use” (FAO, 2004).

The conceptual basis for the differentiation of the European forest types is the key factor approach. The key factors of forest biodiversity are defined as the factors that have a major influence on or directly reflect the variation in biodiversity within European forests (Larsson et al., 2001). Thus, the arrangement of categories and types within the hierarchy follows the principle of increasing similarity in the natural and anthropogenic conditions affecting the values taken by five selected forest type based MCPFE indicators: naturalness, number of forest occurring species, growing stock, age/diameter distribution and deadwood amount (EEA, 2006, 2007).

In the report “European forest types, Categories and types for sustainable forest management reporting and policy” (EEA, 2006, 2007) Categories and Types are described and documented using a descriptive frame including their class definition and geographical distribution in relation to European biogeographical regions or to other relevant environmental references. The report provides a classification key and a nomenclature, along with the parameters used for the systematic identification and characterisation of Categories and Types throughout Europe. The document also links EFTs with EUNIS Level 3 habitats and to Annex I of the EU Habitats Directive (92/43/EEC), and cross-links to the mapping units of the map of the natural vegetation of Europe published by Bohn et al. (2000).

A pilot reporting by EFTs was conducted for six indicators, only being mandatory for two of them, forest area (1.1) and growing stock (1.2) (MCPFE, 2011). The role of the EFTs and the Forest Europe SFM indicators as tools for monitoring progress on forest biodiversity conservation is discussed in a paper by Barbati et al. (2014).
3 Forests in the EUNIS Habitat Classification

The EUNIS (European Union Nature Information System) Habitat Classification has been developed from the earlier CORINE biotopes and Palaearctic habitat classifications “to give common European reference set of habitat units with a common description of all units and a common hierarchical classification to allow the reporting of habitat data in a comparable manner for use in nature conservation (inventories, monitoring and assessments)” (Evans, 2012). Since 1995 it has been developed and managed by the European Topic Centre on Biological Diversity (ETC/BD), formerly on Nature Protection and Biodiversity (2001-2004) and previously on Nature Conservation (1995-2000), for the European Environment Agency (EEA).

The EUNIS Classification is hierarchical and covers all types of habitat types from natural to artificial, from terrestrial to freshwater and marine. EUNIS is structured in 7 levels, where Level 1 of the classification is comprised by 11 classes. Among them, Class G refers to “Woodland, forest and other wooded land” which is defined as following:

<table>
<thead>
<tr>
<th>Box 3.1 The EUNIS habitats classification definition of forest and woodland</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Woodland and recently cleared or burnt land where the dominant vegetation is, or was until very recently, trees with a canopy cover of at least 10%. Trees are defined as woody plants, typically single-stemmed, that can reach a height of 5 m at maturity unless stunted by poor climate or soil. Includes lines of trees, coppices, regularly tilled tree nurseries and tree-crop plantations. Includes Alnus and Populus swamp woodland and riverine Salix woodland. Excludes Corylus avellana scrub and Salix and Frangula carrs. Excludes stands of climatically-limited dwarf trees (krummholz) &lt; 3m high, such as occur at the arctic or alpine tree limit. Excludes parkland and dehesa with canopy less than 10%, which are listed under sparsely wooded grasslands E7” (Davies et al., 2004).</td>
</tr>
</tbody>
</table>

“G Woodland, forest and other wooded land” contains 5 classes in Level 2, “G1 Broadleaved deciduous woodland”, “G2 Broadleaved evergreen woodland”, “G3 Coniferous woodland”, “G4 Mixed deciduous and coniferous woodland”, “G5 Lines of trees, small anthropogenic woodlands, recently felled woodland, early-stage woodland and coppice”. These 5 classes are subdivided in a total of 60 habitats at Level 3 of the classification. These habitats, along with “B1.7 Coastal dune woods”, are considered as EUNIS Forest Habitats (see Annex 2 for a complete list).

The report “EUNIS Habitat Classification Revised 2004” (Davies et al., 2004) provides full documentation of all EUNIS habitats, including descriptions of the forest types, keys and criteria for their identification, descriptive or diagnostic parameters and related phytosociological units. Links to Annex I habitats of the EU Habitats Directive (92/43/EEC) and the Bern Convention Resolution No. 4 (1996) are also added. The crosswalks of EUNIS with Annex I habitats, CORINE Land Cover and the Palaearctic Habitat Classification (PALHAB) are available in tabular form at the EEA webpage (http://www.eea.europa.eu/themes/biodiversity/eunis/eunis-habitat-classification#tab-documents, last accessed, 17th August 2015).

The main advantage of this information system is that access to related data is provided and updated in a modular database portal available from the EUNIS webpage (http://eunis.eea.europa.eu/index.jsp, last accessed 17th August 2015). This is a useful tool that allows searching information on species, habitat types and sites easily (see Figure 3.1). Specifically, it also offers a habitat type hierarchical view up to Level 7 and habitat type descriptions. According to Davies et al. (2004), the information includes data on species, habitats and sites compiled in the framework of Natura 2000 (EU Habitats and Birds Directives), data collected from frameworks such as EIONET, data sources or material published by ETC/BD, information on species, habitats and sites taken into account in relevant
international conventions or from International Red Lists Specific, and data collected in the framework of the EEA’s reporting activities. A guide for users is also available (Moss, 2008).

**Figure 3.1** Overview of EUNIS data portal (available from [http://eunis.eea.europa.eu/index.jsp](http://eunis.eea.europa.eu/index.jsp), last accessed 17th August 2015)

The EUNIS Forest Habitat Classification was reviewed in 2013 (Schaminée et al., 2013) using updated crosswalks from EUNIS Level 3 to EuroVegChecklist, a phytosociological classification of European vegetation (Schaminée et al., 2012, 2013). Recommendations for improving the classification are proposed, mainly the division of certain Level 3 Forest Habitat Types and the renaming of some habitat types. The EEA has published a technical report describing this EUNIS Forest Habitat Classification review (EEA, 2015). The proposed changes are given in Annex 2. It must be noted that this review only considered Level 3 habitat types in classes G1, G2 and G3 and the Habitat B1.7. A further step in the development of the classification is the proposal of new descriptions and species lists for these forest habitats (Schaminée et al., 2013) and the modelling of their spatial distribution based on vegetation relevés from the European Vegetation Archive and Copernicus High Resolution Layers (Mücher et al., 2015).
As a result of the crosswalks between EUNIS and CORINE Land Cover and the distribution modelling exercise, EUNIS forest habitats have been mapped up to Level 3 (see Figure 3.2). In particular, the 5 classes corresponding to Level 2 are reflected in the EEA map of European ecosystem types (2015), which is mainly derived from CORINE and consequently has a 100 m pixel resolution. In the case of Level 3 types, 24 habitat probability maps have been produced for the whole of Europe at a 20 meter spatial resolution.

**Figure 3.2**  EUNIS habitat distribution maps at Level 2 and Level 3

Additionally, in some countries such as Italy (APAT, 2004) and France (Louvel et al., 2013) the EUNIS Habitat Classification has been translated and handbooks have been produced.
4 The crosswalk between European Forest Types and EUNIS Forest Habitat Classification

4.1 Benefits of using the crosswalk

The links between the EFTs and the EUNIS forest habitats were first documented in EEA (2006, 2007) report but the correspondence between classifications was incomplete so the ETC/BD reviewed the links including the EFTs added in UNECE/FAO (2010) and presented these as EFT to EUNIS and EUNIS to EFT tabular crosswalks (Evans, 2013). Although not all the classes have a clear correspondence, these crosswalks allow the use of EFTs and EUNIS as compatible habitat classifications. Thus, users of both communities can profit of their complementarity. In order to show the potential benefits of using the crosswalk, Table 4.1 synthesize the main characteristics of both classifications and compares them.

<td>Not known</td>
<td>Translations of Davies et al. (2004) into Italian (APAT, 2004) and French (Louv et al., 2013) for the habitat types occurring in these countries. Many national habitat classifications give links to EUNIS (e.g CZ, RO).</td>
<td>EUNIS classification has been translated in specific countries</td>
</tr>
</tbody>
</table>
On one hand, EFT users can strongly benefit of using some of EUNIS framework utilities such as the internet database portal with quick links to species information and legal instruments, the distribution maps or country-specific handbooks. Moreover, the changes to EUNIS habitats and links to vegetation syntaxa that are proposed in the 2103 review (EEA, 2015; Schaminéé et al., 2013) bring some clarity to the relationships between EUNIS and EFTs. In particular, the proposed divisions give a clearer fit with EFT Types. The potential benefits of developing relationships between EUNIS and EFTs are well described in this paragraph extracted from Schaminéé et al. (2013): “With the development of a revised classification of EUNIS forest types and a crosswalk of these to the EuroVegChecklist alliances, it becomes possible to realise closer integration of forest classifications across Europe. Populating of alliances with vegetation plot data could then be conceived within the frame of the EFT. This could deliver definition of forest types in phytosociological terms and higher quality distribution maps. With parameterisation of alliances in terms of species and environmental factors, it would also become possible to better define the EFT ‘key factors’ on which the character and functioning of forests depend. The increasing availability of evaluation data for EUNIS types through the Red Data List for European Habitats will also allow a clearer appraisal of indicators of sustainability for EFT forest types”.

On the other hand, EUNIS users can benefit from the links to sustainable forest management reporting provided by EFTs.

4.2 Guidelines to use the crosswalk

The crosswalks between both classifications are shown in Annexes 3 and 4. Annex 3 shows the links from European Forest Types to EUNIS Forest Habitat Types (Level 3) in tabular form. European Forest Types users willing to explore the relations between EFTs and EUNIS are encouraged to look at this comprehensive and self-explanatory table. Once the linkage is known, they may be interested in going into detail in the EUNIS classification factsheets that are displayed in Annex 4. In order to provide guidelines to these factsheets and facilitate its use, they are discussed below. It should be noted that the links between the EFTs and EUNIS Forest Habitats are not straightforward or clear in all the cases, which is also noted in the factsheets.

Figure 4.1 shows an example of factsheets at the 3 levels, which can be used consecutively or independently. A visual overview of the different sections that comprise the factsheet is given through numbers. Further explanation to these numbers is provided here:

1. **Habitat name (in English and scientific) and description (Davies et al., 2004)**. The scientific name is only provided in Level 3 when it is different from the English one. In order to distinguish better between levels, the containing boxes have been coloured in red for Level 1, in blue for Level 2 and in green for Level 3.

2. **Descriptive parameters, legal instruments and related phytosociological units (Davies et al., 2004)**. The concrete information included here is the source of the description, the legal instruments which include the habitat (related habitats of Annex I of the EU Habitats Directive (European Commission 2003) and, if applicable, Bern Convention Resolution No. 4 (1996)), the descriptive or diagnostic parameters such as climate zones, levels of habitat usage, dominant life forms or cover characteristics, and related phytosociological units from Rodwell et al. (2002).

3. **Classification key and criteria for identification (Davies et al., 2004)**. For a quick identification, the focus habitat box has been highlighted in yellow for Levels 1 and 2 and in green for Level 3. Additional detailed explanatory notes accompanying each grey ‘decision box’ are only presented in Levels 1 and 2 with. The parameters given in section number 2 relate to this classification key.
4. Crosswalk to EFT Category and Type (EEA, 2006, 2007; Evans, 2013) (only in Level 3). Here there are included all the European Forest Types (and corresponding Categories) that are considered equivalent to each EUNIS Forest Habitat. It has been specified when there is no clear correspondence between habitats or where the relationship is unclear.

5. Picture showing the habitat (only for Level 3). It must be noted that in diverse units, the picture only represents one of the Habitats included in Level 3. The source of the picture is also provided.

6. Proposed change (name, division and/or description) and associated alliances (EEA, 2015; Schaminée et al., 2013, 2015) (only for Level 3). This section collects the changes that are recommended for the Habitat in terms of name, subdivision, moving or description according to 2013 EUNIS Forest Habitat review. Links to related 2013 EuroVegChecklist alliances (Schaminée et al., 2012, 2013) are shown as well. The review only considered those Level 3 Habitats included in G1, G2 and G3 classes and the Habitat B1.7, and therefore this section is empty in the rest of the habitats.

7. Potential distribution map (Mücher et al., 2015) (only for Level 3). These maps are based on the integration of Maxent predictions and high resolution data, together with the distribution of vegetation relevés. Probability maps are only provided for a selection of habitats. Some of the maps have not been produced due to the lack of enough data to create a reliable model.
Figure 4.1 Schematic description of the structure of EUNIS Forest Habitat factsheets

**LEGEND**

1. Habitat name (in English and scientific) and description (Davies et al., 2004)
2. Descriptive parameters, legal instruments and phytosociological units (Davies et al., 2004)
3. Classification key and criteria for identification (Davies et al., 2004)

4. Crosswalk to EFT Category and Type (EEA, 2006; ETC/BD, 2013)
5. Photograph of the habitat
6. Proposed change (name, division and/or description) and associated alliances (EEA, 2015; Schaminée et al., 2013, 2015)
7. Potential distribution map (Mücher et al., 2015)
5 Conclusions

- The crosswalks between the European Forest Types (EFTs) and the EUNIS Forest Habitats make these classifications compatible and comparable.

- Users of both classifications can benefit from their complementary characteristics. EUNIS has a more developed classification hierarchy, an internet database portal with quick links to species, habitat types, sites and legal instruments, potential distribution maps (20 m resolution) up to Level 3 and is also available in French and Italian. Many national habitat classifications also give links to EUNIS, some of which are available via the website. On the other hand, EFTs typology has links to MCPFE reporting and sustainable forest management indicators.

- To facilitate and promote the use of the crosswalks, this report: 1) synthesizes and compares the main characteristics of both classifications, 2) provides tables listing EFTs (Annex 1) and EUNIS Forest Habitats up to Level 3 (Annex 2) and displaying the crosswalk EFTs to EUNIS (Annex 3), and 3) includes 67 factsheets corresponding to all EUNIS Forest Habitats up to Level 3 of “G Woodland, forest and other wooded Land” and “B1.7 Coastal dune woods” (Annex 4), together with guidelines for their use.

- The recent review of EUNIS forest classification (2013, 2015) has improved the integration of both classifications. Moreover, the crosswalk of EUNIS to vegetation syntaxa could allow the definition of the EFTs in phytosociological terms and the modelling of high resolution distribution maps.

### 6.7 Moesian submountainous beech forest

## 7. Mountainous beech forest

Mixed broadleaved deciduous and coniferous vegetation belt in the main European mountain ranges. Species composition differs from EFT 6, including Picea abies, Abies alba, Betula pendula and mesophytic deciduous tree species. Includes also mountain fir dominated stands.

### 7.1 South western European mountainous beech forest

### 7.2 Central European mountainous beech forest

### 7.3 Apennine-Corsican mountainous beech forest

### 7.4 Illyrian mountainous beech forest

### 7.5 Carpathian mountainous beech forest

### 7.6 Moesian mountainous beech forest

### 7.7 Crimean mountainous beech forest

### 7.8 Oriental beech and hornbeamoriental forest

### 7.9 Mountainous Silver fir forest

## 7. Mountainous beech forest

Mixed broadleaved deciduous and coniferous vegetation belt in the main European mountain ranges. Species composition differs from EFT 6, including Picea abies, Abies alba, Betula pendula and mesophytic deciduous tree species. Includes also mountain fir dominated stands.

### 7.1 South western European mountainous beech forest

### 7.2 Central European mountainous beech forest

### 7.4 Illyrian mountainous beech forest

### 7.5 Carpathian mountainous beech forest

### 7.6 Moesian mountainous beech forest

### 7.7 Crimean mountainous beech forest

### 7.8 Oriental beech and hornbeamoriental forest

### 7.9 Mountainous Silver fir forest

## 8. Thermophilous deciduous forest

Deciduous and semi-deciduous forests mainly of the Mediterranean region dominated by thermophilous species, mainly of Quercus; Acer, Ostrya, Fraxinus, Carpinus species are frequent as associated secondary trees. Includes also Castanea sativa dominated forest.

### 8.1 Downy oak forest

### 8.2 Turkey oak, Hungarian oak and Sessile oak forest

### 8.3 Pyrenean oak forest

### 8.4 Portuguese oak and Mirbeck’s oak Iberian forest

### 8.5 Macedonian oak forest

### 8.6 Valonia oak forest

### 8.7 Chestnut forest

### 8.8 Other thermophilous deciduous forests

## 8. Thermophilous deciduous forest

Deciduous and semi-deciduous forests mainly of the Mediterranean region dominated by thermophilous species, mainly of Quercus; Acer, Ostrya, Fraxinus, Carpinus species are frequent as associated secondary trees. Includes also Castanea sativa dominated forest.

### 8.1 Downy oak forest

Annex 4  EUNIS Forest Habitat Types factsheets with crosswalk to European Forest Types

Note: For an explanation on how to read the factsheets, see Section 4.2 Guidelines to use the crosswalk.

EUNIS Level 3 (2004): B1.7 — Coastal dune woods
Coastal dunes colonised by woodland or riparian thickets.

Crosswalk to EFT Category / Type(s) (2010):
- 2. Hemiboreal forest and nemoral coniferous and mixed broadleaved-coniferous forest / 2.7 Atlantic Maritime pine forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Wooded dunes of the Atlantic, Continental and Boreal region (2180); Wooded dunes with Pinus pinea and/or Pinus pinaster (2270)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): DUNES (16.2)

Descriptive or diagnostic parameters:
- Altitude zones (terrestrial and marine): Coastal
- Geomorphology or landform: Fixed dune
- Dominant life forms: Trees
- Characteristics of wetness or dryness: Dry
- Substrate types: Sand
- Related phytosociological units: Dicrano-Pinion; Quercetea ilicis; Querco-Fagetea

Criteria for Coastal dunes and sandy shores (B1) to Level 3

Explanatory notes:
(b1) Machair (characterised by wind-blown calcareous sand with a predominance of shell fragments usually over peat, a low proportion of sand binding vegetation and a long history of agricultural use) (path = Yes), is distinguished from other coastal sand habitats. Note that a machair complex is defined comprising units from B1, C and I. (b2) The topography of the surface distinguishes the abrupt mounds and hollows of sand dunes from more or less level sand beach habitats. (b3) Dry sand dunes are distinguished from moist or wet dune slacks including dune-slack pools. (b4) Unvegetated mobile sand dunes (path = Yes) are separated from dunes which have become stabilised by vegetation. (b5) Predominant vegetation type is used to distinguish between: dune grassland (herbs); dune heath (predominantly ericaceous dwarf shrubs); dune scrub (shrubs); and dune woodland (trees).

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Coastal dune woodland
Proposed new description: Deciduous or evergreen woodlands variously dominated by durmast oak (Quercus robur), mixed broadleaves, evergreen oaks (Quercus spp.), Scot’s Pine (Pinus sylvestris), thermophilous pines (Pinus spp.) or willows (Salix spp.) on stable dune sands along the Baltic, Atlantic, Mediterranean and Black Sea coasts, often indistinguishable from equivalent forests further inland.
Implications for EFT classification: n/a
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 1 (2004): G — WOODLAND, FOREST AND OTHER WOODED LAND

Woodland and recently cleared or burnt land where the dominant vegetation is, or was until very recently, trees with a canopy cover of at least 10%. Trees are defined as woody plants, typically single-stemmed, that can reach a height of 5 m at maturity unless stunted by poor climate or soil. Includes lines of trees, coppices, regularly tilled tree nurseries, and tree-crop plantations. Includes Alnus and Populus swamp woodland and riverine Salix woodland. Excludes Corylus avellana scrub and Salix and Frangula carrs. Excludes stands of climatically-limited dwarf trees (krummholz) < 3 m high, such as occur at the arctic or alpine tree limit. Excludes parkland and dehesa with canopy less than 10%, which are listed under sparsely wooded grasslands E7.

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)

Descriptive or diagnostic parameters:
- Human activities may include: Forest planting; Artificial planting; Forest replanting
- Dominant life forms: Trees

G EUNIS Habitat Classification: criteria for WOODLAND, FOREST AND OTHER WOODED LAND (G) to Level 2

Explanatory notes:
(Gi) 'Forest' habitats are separated from other wooded habitats. 'Forest' habitats are defined as: natural stands of are a greater than 0.5 ha and crown cover greater than 10% and tree height greater than 5 m; natural stands of area less than 0.5 ha and crown cover greater than 10% and tree height greater than 5 m with more or less natural ground flora (i.e. not heavily influenced by man through management or damage); plantations of area greater than 0.5 ha and crown cover greater than 10% and tree height greater than 5 m. Other wooded land includes: natural stands of area less than 0.5 ha and crown cover greater than 10% and tree height greater than 5 m heavily influenced by man through management or damage (small, intensively managed woods and small woods strongly influenced by anthropogenic activities); young natural stands with height less than 5 m and potential crown cover greater than 10%; plantations of young trees with potential crown cover of greater than 10% and tree height less than 5 m; plantations of area less than approximately 0.5 ha with potential crown cover of greater than 10% and tree height greater than 5 m; areas normally part of the forest area but temporarily unstocked as a result of human intervention or natural causes; coppice; narrow lines of mature trees, such as avenues and windbreaks. Note that Dwarf trees at the arctic and alpine tree limit (i.e. krummholz under conditions where mature individuals are less than 3 m high) are included in F, Heathland scrub and tundra. Excludes stands of climatically-limited dwarf trees (krummholz) < 3 m high, such as occur at the arctic or alpine tree limit. Excludes parkland and dehesa with canopy less than 10%, which are listed under sparsely wooded grasslands E7.
EUNIS Level 2 (2004): G1 — Broadleaved deciduous woodland

Woodland, forest and plantations dominated by summer-green non-coniferous trees that lose their leaves in winter. Includes woodland with mixed evergreen and deciduous broadleaved trees, provided that the deciduous cover exceeds that of evergreens. Excludes mixed forests (G4) where the proportion of conifers exceeds 25%.

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)

Descriptive or diagnostic parameters:
- Human activities may include: Forestry practices; Forest planting; Artificial planting; Forest replanting
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%

G1 EUNIS Habitat Classification: criteria for Broadleaved deciduous woodland (G1) to Level 3

Explanatory notes:
(g1) Highly artificial broadleaved deciduous forests (often of exotic species) of uniform age and structure, completely dependent on man’s operations and with impoverished associated communities (path = Yes) are separated from less highly managed habitats. 
(g2) Highly artificial forestry plantations normally used primarily for timber production (including for fibre and wood-pulp) are separated from fruit and nut tree orchards. Note that shrub orchards are categorised under FB. 
(g3) Three hydrological regimes are distinguished: waterlogged (permanently wet, with the water table at or close to the surface), riparian or alluvial (dependent on flowing water, giving rise to a high water table and subject to occasional flooding) and dry or seasonally wet. 
(g4) Riparian woods with one or few dominant species, typically alder, birch, poplar or willow (Alnus spp., Betula spp., Populus spp. or Salix spp.) (path = Yes) are distinguished from mixed flood-plain and river-terrace forests, sometimes structurally complex and species-rich, often including ash, oak or elm (Fraxinus spp., Quercus spp., Ulmus spp.). 
(g5) Riparian woodlands dominated by willow, alder and birch (Salix spp., Alnus spp., Betula spp.) are separated from riparian woodland habitats characteristic of the Mediterranean climate dominated by other species including ash, plane and elm (Fraxinus spp., Platanus spp., Ulmus spp.). Note that Mediterranean willow woods follow path = willow, alder or birch. 
(g6) Broadleaved swamp woodlands are distinguished between those growing on acid peat (path = Yes) and those formed under neutral or basic conditions (path = No). 
(g7) Dry and seasonally wet woodland habitats are separated according to their dominant species: beech (Fagus spp.); alder (Alnus spp.); birch (Betula spp.); aspen (Populus tremula) or rowan (Sorbus aucuparia); and other. 
(g8) Woodlands characteristic of oligotrophic soils, usually with acidophilous species, are separated (path = Yes) from those on more meso- to eutrophic substrates. Note that birch may be present but never dominant in habitat units in G1.8. More or less pure stands of birch are included under G1.9.
EUNIS Level 3 (2004): G1.1 — Riparian and gallery woodland with dominant alder, birch, poplar and willow. Riparian and gallery woodland, with dominant [Alnus], [Betula], [Populus] or [Salix] Riparian woods of the boreal, boreo-nemoral, nemoral and submediterranean and steppe zones, with one or few dominant species, typically Alnus, Betula, Populus or Salix. Includes woods dominated by narrow-leaved willows Salix alba, Salix elaeagnos, Salix purpurea, Salix viminalis in all zones including the mediterranean. Excludes riverine scrub of broad-leaved willows, e.g. Salix aurita, Salix cinerea, Salix pentandra (F9.1).

Crosswalk to EFT Category / Type(s) (2010):
12. Floodplain forest / 12.1 Riparian forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Natural forests of primary succession stages of landupheaval coast (9030); Alluvial forests with Alnus glutinos and Fraxinus excelsior (Alno-Padion, Alnion incanae, Salicion albae) (91E0); Salix alba and Populus alba galleries (92A0); Riparian formations on intermittent Mediterranean water courses with Rhododendron ponticum, Salix and others (92B0)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Spatial characteristics (when used in criteria): Linear feature
- Characteristics of wetness or dryness: Fringing watercourses / riparian; Intermitten flooding
- Related phytosociological units: Alnion incanae; Fraxinion angustifoliae; Osmundo-Alnion; Populetalia albae; Populion albae; Salicetea purpureae; Salicion albae; Salicion canariensis; Salicion cinereae
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Temperate and boreal softwood riparian woodland
Proposed new description: Willow- and poplar- (Salix- and Populus-) dominated woodland of periodically inundated terraces and shoals with deposition of nutrient-rich alluvium in the active floodplains of rivers through the lowlands of the boreal, nemoral, submediterranean and steppe zones.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: POP-02A, POP-02B, PUR-01C
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G1.2 — Mixed riparian floodplain and gallery woodland
Mixed riparian forests, sometimes structurally complex and species-rich, of floodplains and of galleries beside slow- and fast-flowing rivers of the nemoral, boreo-nemoral, steppe and submediterranean zones. Gallery woods with Acer, Fraxinus, Prunus or Ulmus, together with species listed for G1.1. Floodplain woodland characterised by mixtures of Alnus, Fraxinus, Populus, Quercus, Ulmus, Salix.

Crosswalk to EFT Category / Type(s) (2010):
- 12. Floodplain forest / 12.2 Fluvial forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Alluvial forests with Alnus glutinosa and Fraxinus excelsior (Alno- Padion, Alnion incanae, Salicion albae) (91E0); Riparian mixed forests of Quercus robur, Ulmus laevis and Ulmus minor, Fraxinus excelsior or Fraxinus angustifolia, along the great rivers (Ulmion minoris)(91F0)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Fringing watercourses / riparian; Intermittent flooding
- Related phytosociological units: Alnion glutinosae; Alnion incanae; Carpinion betuli; Fraxinion angustifoliae
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Temperate and boreal hardwood riparian woodland
Proposed new description: Ash-alder (Fraxinus excelsior-Alnus glutinosa/A. incana) and mixed deciduous broadleaved woodland of fresh mineral soils on less-frequently flooded river terraces and flushed valley sides in the lowlands and foothills of the nemoral and boreal zones and locally in the submediterranean.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: POP-02A, POP-02C
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G1.3 — Mediterranean riparian woodland
Alluvial forests and gallery woods of the Mediterranean region. Dominance may be of a single species, of few species or mixed with many species including Fraxinus, Liquidambar, Platanus, Populus, Salix, Ulmus. Excludes Mediterranean Salix woods (G1.1) and shrubby riparian vegetation (F9.3).

Crosswalk to EFT Category / Type(s) (2010):
- 12. Floodplain forest / 12.3 Mediterranean and Macaronesian riparian forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Salix alba and Populus alba galleries (92A0); Platanus orientalis and Liquidambar orientalis woods (Platanion orientalis)(92C0)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Spatial characteristics (when used in criteria): Linear feature
- Characteristics of wetness or dryness: Fringing watercourses / riparian; Intermittent flooding
- Related phytosociological units: Alnion glutinosae; Alnion incanae; Carpinion orientalis; Fraxinion angustifoliae; Platanetalia orientalis; Platanion orientalis; Populion albae; Salicion albae

Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Mediterranean and Macaronesian riparian woodland
Proposed new description: Deciduous broadleaved woodland, most commonly dominated by poplars (Populus), willows (Salix), oriental plane (Platanus orientalis) or Liquidambar, on periodically flooded alluvium or gravel terraces and streamside in humid localities in the Mediterranean zone and Macaronesia. Also includes streamside Rhododendron ponticum and birch (Betula pendula var. fontqueri) woodlands in Spain.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: POP-01A, POP-01B, POP-01C, POP-01D, POP-01E, POP-03A
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G1.4 — Broadleaved swamp woodland not on acid peat
Broadleaved swamp woodland not on acid peat. Includes Alnus, Populus, Quercus swamp woods. Excludes Salix carr, with shrubby willows, e.g. Salix aurita, Salix cinerea, Salix pentandra (F9.2).

Crosswalk to EFT Category / Type(s) (2010):
- 11. Mire and swamp forest / 11.2 Alder swamp forest; 11.4 Pedunculate oak swamp forest; 11.5 Aspen swamp forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Alluvial forests with Alnus glutinosa and Fraxinus excelsior (Alno- Padion, Alnion incanae, Salicion albae) (91E0); Riparian mixed forests of Quercus robur, Ulmus laevis and Ulmus minor, Fraxinus excelsior or Fraxinus angustifolia, along the great rivers (Ulmenion minoris) (91F0)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Waterlogged
- Chemical attributes: Neutral; Base-rich
- Related phytosociological units: Alnetea glutinosae; Alnion glutinosae; Carpinion betuli; Osmundo-Alnion
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Broadleaved swamp woodland on non-acid peat
Proposed new description: Deciduous broadleaved woodland, commonly dominated by alder (Alnus glutinosa and A. incana), oak (Quercus robur) or aspen (Populus tremula) on non-acid peat with ground water at or seasonally above the surface in swamps through the lowlands of the nemoral and boreal zones.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: ALN-01A, MOB-02A, MOB-02B
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G1.5 — Broadleaved swamp woodland on acid peat

Broadleaved woodland on wet acid peat, dominated by Betula pubescens or rarely Alnus glutinosa, sometimes with an admixture of conifers or shrubby Salix species. Sphagnum spp. are normally prominent in the ground vegetation.

Crosswalk to EFT Category / Type(s) (2010):

- 11. Mire and swamp forest / 11.3 Birch swamp forest

EUNIS Forest Habitat Classification (2004)

Source: Hill, M.O., Moss, D., & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Fennoscandian deciduous swamp woods (9080); Bog woodland (91D0)

Descriptive or diagnostic parameters:

- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Waterlogged
- Chemical attributes: Acid
- Substrate types: Peat
- Related phytosociological units: Alnion glutinosae; Betulion pubescentis; Osmundo-Alnion; Salicion cinereae

Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)

Proposed new name: Broadleaved swamp woodland on acid peat
Proposed new description: Deciduous broadleaved or mixed woodland on acid peat on or around active bogs and poor fens with nutrient-poor ground waters occurring through the atlantic and boreal zones and locally, where ground conditions permit, in the continental zone. Usually dominated by birch (Betula pubescens) but with increasing amounts of Scot’s pine (Pinus sylvestris) towards the boreal zone.

Implications for EFT classification: n/a

List of alliances to 2013 EuroVegChecklist: MOB-01A, MOB-01B
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
Forests dominated by beech Fagus sylvatica in western and central Europe, and Fagus orientalis and other Fagus species in southeastern Europe and the Pontic region. Many montane formations are mixed-beech or beech-fir-spruce forests, which are listed under G4.6.

Crosswalk to EFT Category / Type(s) (2010):
- 6. Beech forest / 6.1 Lowland beech forest of southern Scandinavia and north central Europe; 6.2 Atlantic and subatlantic lowland beech forest; 6.3 Subatlantic to Atlantic-Mediterranean submountainous beech forest; 6.4 Central European submountainous beech forest; 6.5 Carpathian submountainous beech forest; 6.6 Illyrian submountainous beech forest; 6.7 Moesian submountainous beech forest
- 7. Mountainous beech forest / 7.1 South-western European mountainous beech forest; 7.2 Central European mountainous beech forest; 7.3 Apennine-Corsican mountainous beech forest; 7.4 Illyrian mountainous beech forest; 7.5 Carpathian mountainous beech forest; 7.6 Moesian mountainous beech forest; 7.7 Crimean beech forest; 7.8 Oriental beech and hornbeam oriental beech forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Luzulo-Fagetum beech forests (9110); Atlantic acidophilous beech forests with Ilex and sometimes also Taxus in the shrublayer (Quercion robori-petraeae or Ilici-Fagenion) (9120); Asperulo-Fagetum beech forests (9130); Mediterranean subalpine beech woods with Acer and Rumex (9140); Mediterranean limestone beech forests of the Cephalanthero-Fagion (9150); Apennine beech forests with Taxus and Ilex (9210); Apennine beech forests with Abies abies and beech forests with Abies nebrodensis (9220); Hellenic beech forests with Abies borisii-regis (9270); Quercus frainetto woods (9280)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): BEECH FORESTS (41.1)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Seasonally wet; Moist / mesic; Dry
- Related phytosociological units: Arcto-Pinetum; Carpinion betuli; Cephalanthero-Fagion; Dornico orientalis Fagion moesiaca; Erythronio-Carpinion; Fagion sylvaticae; Geranio nodosi-Fagion; Geranio striati-Fagion; Ilici-Fagion; Lonicero alpigienae-Fagion; Luzulo-Fagion; Quercion confertae; Quercion roboris; Rhododendro pontici-Fagion orientalis; Scillo ilio-hyacinthi-Fagion; Sympyto cordati-Fagion; Tilio-Acerion
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed division: G1.6a Fagus woodland on non-acid soils, G1.6b Fagus woodland on acid soils
Proposed new descriptions: G1.6a Fagus woodland on non-acid soils, Beech- (Fagus sylvatica and F. orientalis) dominated woodland of base-rich to neutral, oligotrophic to mesotrophic, mineral soils occurring through the Atlantic and continental zones, and reaching into the alpine and, at higher altitudes, the submediterranean region. Associated trees, including evergreen conifers like fir (Abies alba) and spruce (Picea abies) which figures at the altitudinal limit, are always subordinate in cover and usually in height, though broadleaved associates are more extensive and diverse on richer soils and, like the usually sparse shrub layer, show regional climate-related variation. The field layer can be species-rich; G1.6b Fagus woodland on acid soils, Beech- (Fagus sylvatica and F. orientalis) dominated woodland of oligotrophic, base-poor mineral soils through the Atlantic and continental zones, into the alpine and, at higher altitudes, the submediterranean zone. Associated broadleaved trees are few and always subordinate in cover, though oaks may be co-dominant. Evergreen conifers like fir (Abies alba) and, at the altitudinal limit, spruce (Picea abies) can figure as minority canopy components. The field layer is generally species-poor.
Implications for EFT classification: Split cross-cuts EFT typology (G1.6a)
Distribution based on integration Maxent prediction and high resolution data + distrib. of vegetation relevés (right, G1.6a: on non-acid soils; left, G1.6b: on acid soils)
EUNIS Level 3 (2004): G1.7 — Thermophilous deciduous woodland
Forests or woods of submediterranean climate regions and supramediterranean altitudinal levels, and of western Eurasian steppe and substeppe zones, dominated by deciduous or semideciduous thermophilous Quercus species or by other southern trees such as Carpinus orientalis, Castanea sativa or Ostrya carpinifolia. Thermophilous deciduous trees may, under local microclimatic or edaphic conditions, replace the evergreen oak forests in mesomediterranean or thermomediterranean areas, and occur locally to the north in central and western Europe.

Crosswalk to EFT Category / Type(s) (2010):
- 8. Thermophilous deciduous forest / 8.1 Downy oak forest; 8.2 Turkey oak, Hungarian oak and Sessile oak forest; 8.3 Pyrenean oak forest; 8.4 Portuguese oak and Mirbeck’s oak Iberian forest; 8.5 Macedonian oak forest; 8.6 Valonia oak forest; 8.7 Chestnut forest; 8.8 Other thermophilous deciduous forests

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Thermophilous Fraxinus angustifolia woods (91B0); Pannonian woods with Quercus pubescens (91H0); Euro-Siberian steppic woods with Quercus spp (9110); Galician-Portuguese oak woods with Quercus robur and Quercus pyrenaica (9230); Quercus faginea and Quercus canariensis Iberian woods (9240); Quercus trojana woods (9250); Castanea sativa woods (9260); Aegean Quercus brachyphylla woods (9310); Quercus macrolepis forests (9350)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): THERMOPHILOUS AND SUPRAMEDITERRANEAN OAK WOODS (41.7)
Descriptive or diagnostic parameters:
- Climate zones: Mediterranean; Warm non-mediterranean
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees; Thermophile species
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Seasonally wet; Moist / mesic; Dry
- Related phytosociological units: Aceri granatensis-Quercion fagineae; Aceri tatarici-Quercion; Alnion incanae; Aremonio-Fagion; Carpinion betuli; Carpinion orientalis; Fraxino orni-Cotinion; Genisto germanicae-Quercion; Junipero excelsae-Quercion pubescentis; Lathyrion veneti; Melilto-Quercion; Quercetalia pubescenti-petraeae; Quercetalia roboris; Quercion broterei; Quercion conferta; Quercion illicis; Quercion petraeae; Quercion pubescenti-sessiliflorae; Quercion pyrenaicae; Quercion roboris; Querco rotundifoliae-Oleion sylvestris; Salicion albae; Syringo-Carpinion orientalis; Tilio-Acerion
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new description: Deciduous or evergreen woodland of thermophilous and drought-resistant trees, especially oaks (Quercus spp.), with a subordinate tier of regionally varied associates, through the sub-mediterranean zones, drier and warmer situations further north, extending into more humid higher altitudes in the mediterranean zone.
Implications for EFT classification: n/a
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G1.8 — Acidophilous oak-dominated woodland. Acidophilous [Quercus]-dominated woodland

Forests of Quercus robur or Quercus petraea on acid soils with an herb layer mostly constituted by the ecological groups of Deschampsia flexuosa, Vaccinium myrtillus, Pteridium aquilinum, Lonicera periclymenum, Holcus mollis, and of Maianthemum bifolium, Convolvulus majalis, Hieracium sabaudum, Hypericum pulchrum, Luzula pilosa, and the mosses Polytrichum formosum and Leucobryum glaucum.

Crosswalk to EFT Category / Type(s) (2010):
- 4. Acidophylous oakwood and oak-birch forest / 4.1 Acidophylous oakwood; 4.2 Oak-birch forest

EUNIS Forest Habitat Classification (2004)
Legally designated habitat (EU Habitats Directive Annex I): Old acidophilous oak woods with Quercus robur on sandy plains (9190); Old sessile oak woods with ilex and Blechnum in the British Isles (91A0)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): ACIDOPHILOUS OAK FORESTS (41.5)

Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees; Acidophile species
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Seasonally wet; Moist / mesic; Dry
- Chemical attributes: Acid; Oligotrophic
- Related phytosociological units: Alnion incanae; Carpinion betuli; Genisto germanicae-Quercion; Ilici-Fagion; Pino-Quercion; Quercion petraeae; Quercion pyrenaicae; Quercion roburis

Criteria for Broadleaved deciduous woodland (G1) to Level 3

Documentation on the integration of European Forest Types into the EUNIS Habitat Classification
EUNIS Level 3 (2004): G1.9 — Non-riverine woodland with birch, aspen or rowan. Non-riverine woodland with [Betula], [Populus tremula] or [Sorbus aucuparia].

Forests or woods dominated by Betula, Populus tremula or Sorbus aucuparia. Excludes swamp woods (G1.4), woods on wet peat (G1.5) and riparian woods (G1.1).

Crosswalk to EFT Category / Type(s) (2010):
- 3. Alpine forest / 3.4 Mountainous birch forest
- 13. Non-riverine alder, birch or aspen forest / 13.3 Birch forest; 13.4 Aspen forest

EUNIS Forest Habitat Classification (2004)

Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)

Legally designated habitat (EU Habitats Directive Annex I): Western Taïga (9010); Natural forests of primary succession stages of landupheaval coast (9030); Nordic subalpine/subarctic forests with Betula pubescens ssp. czerepanovii (9040)

Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Seasonally wet; Moist / mesic; Dry
- Related phytosociological units: Adenostyletalia alliariae; Alnion incanae; Betulion fontquerio-celtibericae; Corylo-Populion tremulae; Dicrano-Pinion; Fagion sylvaticae; Genisto germanicae-Quercion; Luzulo-Fagion; Phyllodoco-Vaccinion myrtilli; Piceion excelsae; Prunetalia spinosae; Queretalia pubescenti-petraeae; Quercion confertae; Quercion pubescenti-sessiliflorae; Quercion pyrenaicae; Quercion roboris; Sambuco racemosae-Salicion capreae

Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)

Proposed division: G1.9a Boreal and nemoral Betula woodlands on mineral soils, G1.9b Mediterranean Betula and Populus tremula woodlands on mineral soils

Proposed new descriptions: G1.9a Boreal and nemoral Betula woodlands on mineral soils, Open, low canopy climax birch woodlands [Betula pubescens ssp. Czerepanovii = B. tortuosa or ssp. carpatica] with a healthy or herb-rich field layer in the boreal region and nemoral mountains of Cantabria and the Sudeten; G1.9b Mediterranean Betula and Populus tremula woodlands on mineral soils, Diverse climax woodlands dominated by birch (Betula pubescens and its vicariants) or aspen [Populus tremula] on usually acidic mineral soils in humid ravines and gorges in the sub-alpine Pyrenees, Corsica, the Apennines and Sicily, with associated floras characteristic of the local climatic conditions.

Implications for EFT classification: 3.4 Mountainous birch forest (G1.9a), 13.3 Birch forest (G1.9b), 13.4 Aspen forest (G1.9b)

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés: G1.9a Boreal and nemoral Betula woodlands on mineral soils

Source: V. Jalvo-García
EUNIS Level 3 (2004): G1.A — Meso- and eutrophic oak, hornbeam, ash, sycamore, lime, elm and related woodland. Meso- and eutrophic [Quercus], [Carpinus], [Fraxinus], [Acer], [Tilia], [Ulmus] and related woodland

Woods, typically with mixed canopy composition, on rich and moderately rich soils. Includes woods dominated by Acer, Carpinus, Fraxinus, Quercus (especially Quercus petraea and Quercus robur), Tilia and Ulmus. Excludes acid Quercus woodland (G1.8) and woodland with a large representation of southern species such as Fraxinus ornus or Quercus pubescens (G1.7).

Crosswalk to EFT Category / Type(s) (2010):
- 5. Mesophytic deciduous forest / 5.1 Pedunculate oak-hornbeam forest; 5.2 Sessile oak hornbeam forest; 5.3 Ashwood and oak-ash forest; 5.4 Maple-oak forest; 5.5 Lime-oak forest; 5.6 Maple-lime forest; 5.7 Lime forest; 5.8 Ravine and slope forest; 5.9 Other mesophytic deciduous forests

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Fennoscandian hemiboreal natural old broad-leaved deciduous forests (Quercus, Tilia, Acer, Fraxinus or Ulmus) rich in epiphytes (9020); Sub-Atlantic and medio-European oak or oak-hornbeam forests of the Carpinion betuli (9160); Galio Carpinetum oak-hornbeam forests (9170); Tilio-Acerion forests of slopes, scree and ravines (9180); Pannonic woods with Quercus petraea and Carpinus betulus (91G0)

Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Seasonally wet; Moist / mesic; Dry
- Chemical attributes: Mesotrophic; Eutrophic
- Related phytosociological units: Aceri tatarici-Quercion; Alnion incanae; Alno-Quercion roboris; Arem-Fagion; Berberidion vulgaris; Carpinion betuli; Carpinion orientalis; Castaneo-Quercion petraeae; Cephalanthero-Fagion; Erythronio-Carpinion; Fagion sylvaticae; Junipero excelsae-Quercion pubescentis; Prunetalia spinosae; Pulmonario longifoliae-Quercion roboris; Quercetalia pubescenti-petraeae; Quero roboris-Tilion cordatae; Salicion albae; Tilio-Acerion

Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Mesotrophic and eutrophic deciduous woodland, not dominated by Fagus
Proposed new description: Deciduous mixed broadleaved woodland on drought-free mineral soils, neutral to base-rich and of moderate to high nutrient status, through the lowlands and foothills of the nemoral zone extending locally into the boreal and submediterranean zones and pannonian region. The tree canopy is often diverse and structurally complex with a rich and extensive understorey and field layer showing striking regional variation and an often distinctive vernal aspect.

Implications for EFT classification: n/a

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
Nonriparian, nonmarshy woods dominated by Alnus spp.

Crosswalk to EFT Category / Type(s) (2010):
- 13. Non-riverine alder, birch or aspen forest / 13.1 Alder forest; 13.2 Italian alder forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Western Taïga (9010); Natural forests of primary succession stages of landupheaval coast (9030)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Seasonally wet; Moist / mesic; Dry
- Related phytosociological units: Alnion incanae; Fagion sylvaticae
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Non-riverine Alnus woodland on mineral soil
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: ALN-01A, POP-02A
Distribution: no probability maps produced

Documentation on the integration of European Forest Types into the EUNIS Habitat Classification
EUNIS Level 3 (2004): G1.C — Highly artificial broadleaved deciduous forestry plantations
Cultivated deciduous broad-leaved tree formations planted for the production of wood, composed of exotic species, of native species out of their natural range, or of native species planted in clearly unnatural stands, often as monocultures.

Crosswalk to EFT Category / Type(s) (2010):
- Unclear relationship to 14. Introduced tree species forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): none

Descriptive or diagnostic parameters:
- Human activities and impacts: Forestry practices; Forest planting; Artificial planting; Forest replanting; Forestry clearance; Removal of forest undergrowth; Removal of dead and dying trees; Forest exploitation without replanting; Anthropogenic impacts
- Levels of habitat usage (when used in criteria): Intensive use / disturbance; Active management
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Spatial characteristics (when used in criteria): > 0.5 ha

Criteria for Broadleaved deciduous woodland (G1) to Level 3

Distribution: no probability maps produced
EUNIS Level 3 (2004): G1.D — Fruit and nut tree orchards
Stands of trees cultivated for fruit or flower production, providing permanent tree cover once mature.

Crosswalk to EFT Category / Type(s) (2010):
- Not covered by EFT

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): none
Descriptive or diagnostic parameters:
- Human activities and impacts: Fruit and nut orchards; Forest planting; Artificial planting; Forest replanting; Anthropogenic impacts
- Levels of habitat usage (when used in criteria): Intensive use / disturbance; Active management
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved deciduous trees
- Cover characteristics (when used as criteria): Trees >10%
- Spatial characteristics (when used in criteria): > 0.5 ha
Criteria for Broadleaved deciduous woodland (G1) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed change: G1.D is not a woodland and should be removed, could go into EUNIS group I of Level 1 (Regularly or recently cultivated agricultural, horticultural and domestic habitats)
Implications for EFT classification: n/a
Distribution: no probability maps produced
EUNIS Level 2 (2004): G2 — Broadleaved evergreen woodland
Temperate forests dominated by broad-leaved sclerophyllous or lauriphyllous evergreen trees, or by palms. They are characteristic of the Mediterranean and warm-temperate humid zones.

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)

Descriptive or diagnostic parameters:
- Human activities may include: Forestry practices; Forest planting; Artificial planting; Forest replanting
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved evergreen trees
- Cover characteristics (when used as criteria): Trees >10%

G2 EUNIS Habitat Classification: criteria for Broadleaved evergreen woodland (G2) to Level 3

Explanatory notes:
(g10) Highly artificial broadleaved evergreen forests (often of exotic species) of uniform age and structure, completely dependent on man’s operations and with impoverished associated communities (path = Yes) are separated from less highly managed habitats. (g11) Highly artificial evergreen forestry plantations normally primarily used for timber production are separated from those used for other purposes (including olive groves and palm plantations). (g12) Habitats are separated according to their dominant species: evergreen oaks (Quercus); laurels (Laurus); holly (Ilex); palms (Phoenix); olive (Olea europea) or carob (Ceratonia siliqua); and other very tall, forest-like formations dominated by Erica arborea, Myrica faya, Arbutus canariensis or Visnea mocanera. (g13) Laurel (Laurus)-dominated habitats characteristic of the Macaronesian biogeographic region are separated from those of the Mediterranean and Atlantic regions (path = other).
Woodland with dominant evergreen arborescent Quercus, e.g. Quercus alnifolia, Quercus coccifera, Quercus ilex, Quercus rotundifolia, Quercus suber.

Crosswalk to EFT Category / Type(s) (2010):
- 9. Broadleaved evergreen forest / 9.1 Mediterranean evergreen oak forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Quercus suber forests (9330); Quercus ilex and Quercus rotundifolia forests (9340)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): TEMPERATE BROAD-LEAVED EVERGREEN FORESTS (45)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved evergreen trees
- Cover characteristics (when used as criteria): Trees >10%
- Related phytosociological units: Aceri granatensis-Quercion fagineae; Arbuto andrachnæ-Quercion cocciferae; Cistion laurifolii; Lathyrion veneti; Oleo-Ceratonion siliquae; Paenio broteroi-Abietion pinsapo; Quercetalia ilicis; Quercion broteroi; Quercion ilicis; Quercion pubescenti-sessiliflorae; Quercion pyrenaicae; Querco rotundifoliae-Oleion sylvestris

Criteria for Broadleaved evergreen woodland (G2) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Mediterranean evergreen Quercus woodland
Proposed new description: Woodland dominated by evergreen broadleaved oaks (most widely Quercus ilex) with associated sclerophyllous and lauriphilous trees and shrubs in the summer-drought climate of the Mediterranean lowlands and foothills. The tree canopy is often low and much modified, with widespread transitions to scrubby maquis/matorral and open dehesa/montado wood pasture.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: QUI-02A, QUI-02D, QUI-03A, QUI-03B, QUI-03C, QUI-03D, QUI-03E, QUI-03F, QUI-03G

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G2.2 — Eurasian continental sclerophyllous woodland
Lauriphyllous and mixed lauriphyllous-xerophyllous evergreen forests of the Warm-Temperate Humid zones of the Eurasian continent and continental shelf islands and of humid enclaves within the Mediterranean zones. Lauriphyllous forests of the oceanic Macaronesian archipelagoes are listed separately under G2.3.

Crosswalk to EFT Category / Type(s) (2010):

- 9. Broadleaved evergreen forest / 9.5 Other sclerophyllous forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): none
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): TEMPERATE BROAD-LEAVED EVERGREEN FORESTS (45)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved evergreen trees
- Cover characteristics (when used as criteria): Trees >10%
- Related phytosociological units: Quercion ilicis
Criteria for Broadleaved evergreen woodland (G2) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Mainland lauriphyllous woodland
Proposed new description: Evergreen lauriphyllous short-stature woodland, often dominant by bay (Laurus nobilis) or strawberry tree (Arbutus unedo) in warm temperate oceanic and hyper-humid situations, now surviving as small relics in sheltered situations like ravines along the Atlantic coast of Portugal and Spain and in Sardinia, southern Italy and Sicily. Typically species-poor with an associated flora similar to G2.1.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: QUI-03I
Distribution: not enough data to create a reliable model
Humid to hyper-humid, mist-bound, luxuriant, evergreen, lauriphyllous forests of the cloud belt of the Macaronesian islands, extremely rich in floral and faunal species, among which many are restricted to these communities. Genera such as Picconia, Semele, Gesnouinia, Lactucosonchus, Ixanthus are entirely endemic to these communities, while others, such as Isoplexis, Visnea and Phyllis reach in them their maximum development; in addition, each of the formations of the various archipelagos harbours distinctive endemic species. Laurel forests are the most complex and remarkable relict of the humid sub-tropical vegetation of the Miocene-Pliocene late Tertiary of southern Europe. Areas of intact forests have been drastically reduced to a level below which the preservation of their elements could not be sustained.

Crosswalk to EFT Category / Type(s) (2010):
- 9. Broadleaved evergreen forest / 9.4 Macaronesian laurisilva

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Macaronesian laurel forests (Laurus, Ocotea)(9360)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): TEMPERATE BROAD-LEAVED EVERGREEN FORESTS (45)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved evergreen trees
- Cover characteristics (when used as criteria): Trees >10%

Criteria for Broadleaved evergreen woodland (G2) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Phoenix groves
Proposed new description: Fragmentary woodlands of palms (Phoenix spp.) and dragon trees (Dracaena spp.), dependent on periodic torrents, often along temporary stream-sides, in the very dry to arid eastern Mediterranean and Macaronesian lowlands.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: NER-01F, OLE-01C
Distribution: not enough data to create a reliable model
EUNIS Level 3 (2004): G2.6 — Holly woods. [Ilex aquifolium] woods
Woods dominated by tall arborescent Ilex aquifolium. They occur in the supra-Mediterranean level of Sardinia and Corsica and in Atlantic mountains of northwestern Spain, mostly as a facies of relict yew-holly forests G3.9. Other scattered occurrences exist in the nemoral zone of western Europe, as facies of beech forest G1.6 or acidophilous oak forest G1.8.

Crosswalk to EFT Category / Type(s) (2010):
- 9. Broadleaved evergreen forest / 9.5 Other sclerophyllous forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Forests of Ilex aquifolium (9380)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): TEMPERATE BROAD-LEAVED EVERGREEN FORESTS (45)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved evergreen trees
- Cover characteristics (when used as criteria): Trees >10%
- Related phytosociological units: Carpinion betuli; Fagion sylvaticae; Quercion ilicis; Quercion roboris
Criteria for Broadleaved evergreen woodland (G2) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Ilex aquifolium woodland
Proposed new description: Holly- (Ilex aquifolium-) dominated woodland occurring in scattered localities across Europe and probably an arborescent survival of G3.9 Taxus woodland at middle altitudes in the Mediterranean zone and of G1.6 Fagus and G1.8 Quercus in the nemoral lowlands.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: FAG-01I, FAG-02A, FAG-02B, QUI-03D, ROB-01B, ROB-01C, ROB-02A
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
EUNIS Level 3 (2004): G2.7 — Canary Island heath woodland
Very tall, forest-like, formations dominated by Erica arborea, Myrica faya, Arbutus canariensis or Visnea mocanera, occurring naturally in the most wind-exposed and the driest stations within the "monte verde" of the Canary Island cloud belt; they also occur extensively as degradation stages of the Laurus woodland G2.3 or as secondary colonists.

Crosswalk to EFT Category / Type(s) (2010):
- 9. Broadleaved evergreen forest / 9.5 Other sclerophyllous forest

List of alliances to 2013 EuroVegChecklist: n/a
Distribution: no probability maps produced
EUNIS Level 3 (2004): G2.9 — Evergreen orchards and groves
In Europe these are mostly olives and citrus.

Crosswalk to EFT Category / Type(s) (2010):
- Not covered by EFT

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): none
Descriptive or diagnostic parameters:
- Human activities and impacts: Fruit and nut orchards; Artificial planting; Forest replanting; Anthropogenic impacts
- Levels of habitat usage (when used in criteria): Intensive use / disturbance; Active management
- Dominant life forms: Trees; Trees > 5m / tall trees; Broadleaved evergreen trees
- Cover characteristics (when used as criteria): Trees >10%
- Spatial characteristics (when used in criteria): > 0.5 ha
Criteria for Broadleaved evergreen woodland (G2) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed change: G2.9 is not a woodland and should be removed, could go into EUNIS group I of Level 1 (Regularly or recently cultivated agricultural, horticultural and domestic habitats)
Implications for EFT classification: n/a
Distribution: no probability maps produced
EUNIS Level 2 (2004): G3 — Coniferous woodland

Woodland, forest and plantations dominated by coniferous trees, mainly evergreen (Abies, Cedrus, Picea, Pinus, Taxus, Cupressaceae) but also deciduous Larix. Excludes mixed forests (G4) where the proportion of broadleaved trees exceeds 25%.

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)

Descriptive or diagnostic parameters:
- Human activities and impacts: Forestry practices; Forest planting; Artificial planting; Forest replanting
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees
- Cover characteristics (when used as criteria): Trees >10%

G3 EUNIS Habitat Classification: criteria for Coniferous woodland (G3) to Level 3

Explanatory notes:
(g14) Highly artificial coniferous forests (often of exotic species) of uniform age and structure, completely dependent on man's operations and with impoverished associated communities (path = Yes) are separated from less highly managed habitats. (g15) Two hydrological regimes are distinguished: wet (with the water table at or close to the surface for at least half the year); and mesic or dry. (g16) Wet coniferous woodland habitats characteristic of the Boreal zone are distinguished (path = Yes). (g17) Mesic or dry coniferous woodland habitats characteristic of the Boreal zone are distinguished (path = Yes). (g18) Mesic and dry non-Boreal habitats are separated according to their dominant species groups: fir (Abies spp.) or spruce (Picea spp.); larch (Larix spp.); and/or Arrolla (Pinus cembra); Pinus nigra group (Pinus nigra, Pinus dalmatica, Pinus laricio, Pinus pallasiana); cypresses (Cupressus and Tetraclinis), juniper (Juniperus) or yew (Taxus baccata); pine or pine-juniper (excluding P. nigra). (g19) Pine (Pinus) and juniper (Juniperus)-dominated woodlands are separated between biogeographic region: Mediterranean; Macaronesian and other (atlantic, Continental, Alpine, etc.). (g20) Pine woodlands in the subalpine altitude zone (usually dominated by Pinus uncinata) are distinguished from those in the lowland and montane altitude zones usually dominated by Pinus sylvestris. Note that Pinus sylvestris forests may occur in the subalpine zone but follow path = lowland and montane. (g21) Mediterranean pine woodlands other than of Pinus nigra are separated by altitude into a group in the montane and subalpine zones close to the tree-line (dominated by Pinus heldreichii (=Pinus leucodermis), Pinus peuce) and thermophilous pine woodlands in lowland to montane situations (dominated by Pinus halepensis, P. pinea and P. pinaster). (g22) Coniferous woodlands of the taiga zone are separated between those dominated by spruce; by pine; and by larch.
Woodland dominated by Abies or Picea.

Crosswalk to EFT Category / Type(s) (2010):
- 2. Hemiboreal forest and nemoral coniferous and mixed broadleaved-coniferous forest / 2.3 Nemoral spruce forest; 2.8 Nemoral Silver fir forest
- 3. Alpine coniferous forest / 3.2 Subalpine and mountainous spruce and mountainous mixed spruce-silver fir forest
- 7. Mountainous beech forest / 7.9 Mountainous Silver fir forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): Hellenic beech forests with Abies borisii-regis (9270); Acidophilous Picea forests of the montane to alpine levels (Vaccinio- Piceetea)(9410); Southern Apennine Abies alba forests (9510); Abies pinsapo forests (9520)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Abietion cephalonicae; Abieti-Piceion; Aremonio-Fagion; Carpinion betuli; Chrysanthemo rotundifolii-Piceion; Doronico orientalis-Fagion moesiaci; Fagetalia sylvaticae; Fagion sylvaticae; Geranio striati-Fagion; Lonicero alpigenae-Fagion; Piceion excelsae; Pinion mugo; Quercion ilicis; Rhododendro pontici-Fagion orientalis; Symphyto cordati-Fagion

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed division: G3.1a Temperate mountain Picea woodland, G3.1b Temperate mountain Abies woodland, G3.1c Mediterranean mountain Abies woodland
Proposed new descriptions: G3.1a Temperate mountain Picea woodland, Evergreen coniferous woodland dominated by spruce (Picea abies and, in the Dinaric mountains, relict P. omorika), often with some fir (Abies alba) on usually acidic, even very oligotrophic, wet, cold or rocky soils in the montane and sub-alpine belts of nemoral mountains; G3.1b Temperate mountain Abies woodland, Woodlands of fir (Abies alba) in nemoral mountains, often with beech (Fagus sylvatica) towards the sub-montane limit, spruce (Picea abies) where site conditions are harsher at higher altitudes. On generally acidic soils though extending up to more base-rich and mesotrophic soils where distinctive contingents of herbs augment or replace the usually heathy field layer; G3.1c Mediterranean mountain Abies woodland, Evergreen coniferous woodlands of more sunless or fog-bound slopes and gullies in the lower to mid altitudinal belts of Mediterranean mountains where firs of very limited distribution dominate in highly distinctive relic stands: Spanish fir (A. pinsapo), Greek fir (A. cephalonica), King Boris’s fir (A. borisiiregis), Apennine or Sicilian stands of silver fir (A. alba) and Sicilian fir (A. nebrodensis).

Implications for EFT classification: 2.3 Nemoral spruce forest (G3.1a), 3.2 Subalpine and mountainous spruce and mountainous mixed spruce-silver fir forest (G3.1a), 2.8 Nemoral Silver fir forest (G3.1b), 7.9 Mountainous Silver fir forest (G3.1c), 10.6 Mediterranean and Anatolian fir forest (G3.1c)

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés (right, G3.1a: Temperate mountain Picea woodland; left, G3.1b: Temperate mountain Abies woodland)

Forests of the subalpine and sometimes montane levels of the Alps and the Carpathians, dominated by Larix decidua or Pinus cembra; the two species may form either pure or mixed stands, and may be associated with Picea abies or, in the western Alps, Pinus uncinata.

Crosswalk to EFT Category / Type(s) (2010):
- 3. Alpine forest / 3.1 Subalpine larch-arolla pine and dwarf pine forest

EUNIS Forest Habitat Classification (2004)
Legally designated habitat (EU Habitats Directive Annex I): Alpine Larix decidua and/or Pinus cembra forests (9420)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Erico-Pinion sylvestris; Piceion excelsae; Pinion mugo; Pino mugo-Ericion; Quercion pubescenti-sessiliflorae; Rhododendro-Vaccinion

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Temperate subalpine Larix-Pinus woodland
Proposed new description: Coniferous, in part deciduous, woodland of larch (Larix decidua) or Arolla pine (Pinus cembra) in the mid sub-alpine belt of temperate mountains in the central Alps and Carpathians with long but shallow snow- lie and a short growing season. Dwarf mountain pine (P. mugo), spruce (Picea abies), fir (Abies alba), rhododendrons and other sub-shrubs are never more than subordinate but various whitebeams (Sorbus spp.) are characteristic associates.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: ERI-01A, PIC-01A
Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés
Mostly subalpine forests of the Alps, the Jura, the Pyrenees and the Iberian Range, dominated by Pinus uncinata, usually open and with a very developed shrubby understory.

Crosswalk to EFT Category / Type(s) (2010):
- 3. Alpine forest

EUNIS Forest Habitat Classification (2004)
Legally designated habitat (EU Habitats Directive Annex I): Subalpine and montane Pinus uncinata forests (if on gypsum or limestone) (9430)
Description or diagnostic parameters:
- Altitude zones (terrestrial and marine): Subalpine
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Cytision oromediterranei; Erico-Pinion sylvestris; Juniperion nanae; Juniperocarpi-Pinion catalaunicae; Pinion uncinatae; Pino mugo-Ericion; Pino sylvestris-Juniperion sabinae; Rhododendro-Vaccinion
Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed change: G3.3 [Pinus uncinata] woodland should be merged into G3.2 [Alpine [Larix] - [Pinus cembra] woodland] (this category corresponds to the same phytosociological units, with Pinus species as the usual dominant)]
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: ERI-01A, PIC-01A, PIC-01D
Distribution: no probability maps produced
EUNIS Level 3 (2004): G3.4 — Scots pine woodland south of the taiga. [Pinus sylvestris] woodland south of the taiga

Forests of Pinus sylvestris ssp. sylvestris and Pinus sylvestris ssp. hamata of the Nеморal и Mediterranean zones and of their transitions to the Steppe zone. Included are, in particular, the forests of Scotland, of the Alpine system, of the Mediterranean peninsulas, of the lowlands of Central Europe, of the East European Nеморal zone and its adjacent wooded steppes, formed by Pinus sylvestris ssp. sylvestris, as well as those of Anatolia, of the Caucasus and of Crimea, formed by Pinus sylvestris ssp. hamata. Excluded are the formations situated within the range of natural lowland occurrence of Picea abies.

Crosswalk to EFT Category / Type(s) (2010):
- 2. Hemiboreal forest and nemoral coniferous and mixed broadleaved-coniferous forest / 2.2 Nеморal Scots pine forest
- 3. Alpine forest / 3.3 AlpineScots pine and Black pine forest
- 10. Coniferous forests of the Mediterranean, Anatolian and Macaronesian regions / 10.4 Mediterranean and Anatolian Scots pine forest

EUNIS Forest Habitat Classification (2004)

Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)

Legally designated habitat (EU Habitats Directive Annex I): Caledonian forest (91C0)

Descriptive or diagnostic parameters:
- Altitude zones (terrestrial and marine): Planar; Collinar; Submontane; Montane (sensu stricto)
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Betulion pubescentis; Cytision oromediterranei; Cytiso ruthenici
- Characteristics of coniferous woodland (G3) to Level 3

Criteria for Coniferous woodland (G3) to Level 3

EUNIS Forest Habitat Classification (2004)

Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)

Legally designated habitat (EU Habitats Directive Annex I): Caledonian forest (91C0)

Descriptive or diagnostic parameters:
- Altitude zones (terrestrial and marine): Planar; Collinar; Submontane; Montane (sensu stricto)
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use

- Characteristics of coniferous woodland (G3) to Level 3

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)

Proposed division (SEE ALSO G3.5): G3.4a Temperate Continental Pinus sylvestris woodland, G3.4b Temperate and sub-mediterranean montane Pinus sylvestris-Pinus nigra woodland.

Proposed new description: G3.4a Temperate Continental Pinus sylvestris woodland, Woodlands dominated by pine (Pinus sylvestris), often with some birch (Betula pendula and B. pubescens), aspen (Populus tremula), juniper (Juniperus communis) and various whitebeams (Sorbus spp.), on acidic to base-rich soils through the north nemoral zone and into the hemi-boreal; G3.4b Temperate and sub-mediterranean montane Pinus sylvestris-Pinus nigra woodland.

EUNIS Level 3 (2004): G3.4a Temperate Continental Pinus sylvestris woodland, G3.4b Temperate and sub-mediterranean montane Pinus sylvestris-Pinus nigra woodland.

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés (right, G3.4a: Temperate continental Pinus sylvestris woodland; left, G3.4b: Temperate and submediterranean montane Pinus sylvestris-Pinus nigra woodland)
Forests dominated by pines of the Pinus nigra group.

Crosswalk to EFT Category / Type(s) (2010):
- 2. Hemiboreal forest and nemoral coniferous and mixed broadleaved-coniferous forest / 2.4 Nemoral Black pine forest
- 10. Coniferous forests of the Mediterranean, Anatolian and Macaronesian regions / 10.2 Mediterranean and Anatolian Black pine forest

Review of EUNIS Forest Habitat Classification (2013)
Proposed division (SEE ALSO G3.4): G3.4c Mediterranean montane Pinus sylvestris-Pinus nigra woodland. G3.5 [Pinus nigra] woodland should to be merged into the G3.4b and G3.4c types.
Proposed new description for G3.4c: Evergreen coniferous woodland of more drought-prone situations at scattered localities through the mountains of the Mediterranean zone, dominated by black pine (Pinus nigra) and, except on Mediterranean islands, sometimes with subordinate Scots pine (Pinus sylvestris), both trees often occurring as vicariant forms in different localities.
Implications for EFT classification: 10.2 Mediterranean and Anatolian Black pine forest (G3.4c), 10.4 Mediterranean and Anatolian Scots pine forest (G3.4c).
Distribution of G3.4c Mediterranean montane Pinus sylvestris-Pinus nigra woodland: not enough data to create a reliable model.
Woods of Pinus heldreichii, Pinus leucodermis or Pinus peuce.

Crosswalk to EFT Category / Type(s) (2010):
- 10. Coniferous forests of the Mediterranean, Anatolian and Macaronesian regions / 10.5 Alti-Mediterranean pine forest

EUNIS Forest Habitat Classification (2004)
Legally designated habitat (EU Habitats Directive Annex I): none
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): HIGH ORO-MEDITERRANEAN PINE FORESTS (42.7)
Descriptive or diagnostic parameters:
- Altitude zones (terrestrial and marine): Montane (sensu stricto); Subalpine
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Pinion heldreichii; Pinion peucis

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Mediterranean and Balkan subalpine Pinus heldreichii-peucis woodland
Proposed new description: Evergreen coniferous woodland of timberlines in the mountains of the Balkans and southern Italy, dominated by Bosnian pine (Pinus heldreichii) on base-rich soils in more sunny and drought-prone situations or by Macedonian pine (P. peuce) on siliceous soils.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: ERI-01E, PIC-01F
Distribution: not enough data to create a reliable model.

Mediterranean and thermo-Atlantic forests of thermophilous pines, mostly appearing as successional stages or plagioclimax replacements of Mediterranean evergreen broadleaved woodland G2.1 or G2.4. Long-established plantations of these pines, within their natural area of occurrence, and with an undergrowth basically similar to that of G2.1 and G2.4, are included.

Crosswalk to EFT Category / Type(s) (2010):

- 2. Hemiboreal forest and nemoral coniferous and mixed broadleaved-coniferous forest / 2.7 Atlantic Maritime pine forest
- 10. Coniferous forests of the Mediterranean, Anatolian and Macaronesian regions / 10.1 Mediterranean pine forest

EUNIS Forest Habitat Classification (2004)

Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)

Legally designated habitat (EU Habitats Directive Annex I): Wooded dunes with Pinus pinea and/or Pinus pinaster (2270); Mediterranean pine forests with endemic Mesogean pines (9540)

Descriptive or diagnostic parameters:

- Altitude zones (terrestrial and marine): Planar; Collinar; Submontane; Montane (sensu stricto)
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees; Thermophile species
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Ceratonio-Rhamnion oleoidis; Cisto-Ericion; Cisto-Lavanduletea; Fagion sylvatica; Juniper excelsae-Quercion pubescentis; Juniper intermediae-Pinion catalaunicae; Oleo-Ceratonion siliquae; Quercetalia ilicis; Quercetea

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)

Proposed new name: Mediterranean lowland to submontane Pinus woodland

Proposed new description: Evergreen coniferous woodland dominated by various thermophilous pines: Maritime pine (Pinus pinaster in eastern Mediterranean and warm Atlantic zones), Aleppo pine (P. halepensis) and Stone pine (P. pinea all around the southern European coast) and Aegean pine (P. brutia in Greece and on Aegean islands), the first three often favouring unstable substrates or precclimax situations.

Implications for EFT classification: n/a

List of alliances to 2013 EuroVegChecklist: QUI-01A, QUI-01G, QUI-02B, QUI-02E, QUI-03D, QUI-03H, SAB-04A

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés

Forests of endemic Pinus canariensis, of the dry montane level at around 800 to 2000 m (locally down to 500 and up to 2500 m) in Tenerife, La Palma, Gran Canaria and Hierro, with Chamaecytisus proliferus, Adenocarpus foliolosus, Cistus symphytifolius, Lotus campylolobus, Lotus hillebrandii, Lotus spartioides, Daphne gnidium, Juniperus cedrus, Micromeria spp.; these forests, of which well-preserved examples have become rare, are the only habitat of Fringilla teydea, Dendrocopos major canariensis and Dendrocopos major thanneri.

Crosswalk to EFT Category / Type(s) (2010):
- 10. Coniferous forests of the Mediterranean, Anatolian and Macaronesian regions / 10.3 Canarian pine forest

EUNIS Forest Habitat Classification (2004)
Legally designated habitat (EU Habitats Directive Annex I): Canarian endemic pine forests (9550)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): CANARY ISLANDS PINE FORESTS (42.9)

Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Cisto-Pinion canariensis; Juniperion brevifoliae; Myrico fayae–Ericion arboreae; Rubio pericymeni–Rubion ulmifolii

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Pinus canariensis woodland
Proposed new description: Woodland of endemic Canarian pine (Pinus canariensis) occurring mostly at high altitudes in dry sunny situations above the fog belt, locally on foothill rock outcrops and old lava flows, in the western Canary Islands.

Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: CAN-01A
Distribution: no probability maps produced
EUNIS Level 3 (2004): G3.9 — Coniferous woodland dominated by Cupressaceae or Taxaceae. Coniferous woodland dominated by [Cupressaceae] or [Taxaceae]
Woods dominated by Cupressus sempervirens, Juniperus spp. or Taxus baccata of the nemoral and Mediterranean mountains and hills.

Crosswalk to EFT Category / Type(s) (2010):
- 10. Coniferous forests of the Mediterranean, Anatolian and Macaronesian regions / 10.7 Juniper forest; 10.8 Cypress forest; 10.9 Cedar forest; 10.10 Tetraclinis articulata stands; 10.11 Mediterranean yew stands

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Taxus baccata woods of the British Isles (91J0); Cupressus forests (Aceroc-Cupression) (9290); Endemic forests with Juniperus spp (9560); Tetraclinis articulata forests (9570); Mediterranean Taxus baccata woods (9580)
Legally designated habitat (Council of Europe Bern Convention Res. No. 4 1996): WESTERN PALAEARCTIC CYPRESS, JUNIPER AND YEW FORESTS (42.A)
Descriptive or diagnostic parameters:
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Cupressus trees; Yew trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Moist / mesic; Dry
- Related phytosociological units: Aceroc sempervirenti-Cupression sempervirentis; Fagion sylvaticae; Juniperion brevifoliae; Juniperion excelsae; Juniperion thuriferae; Juniper excelsae-Quercion pubescentis; Mayteno-Juniperion canariensis; Oleo-Ceratonion siliquae; Periplocion angustifoliae; Quercetea pubescentis; Quercion ilicis

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed division: G3.9a Taxus baccata woodland, G3.9b Mediterranean Cupressaceae woodland, G3.9c Macaronesian Junipers woodland
Proposed new description: G3.9a Taxus baccata woodland, Evergreen woodlands overwhelmingly dominated by yew (Taxus baccata), sometimes with holly (Ilex aquifolium), whitebeam (Sorbus aria) and box (Buxus sempervirens), maybe in halted successions or as senescent survivals, occurring very locally on base-rich soils in the Mediterranean zone and in the British Isles; G3.9b Mediterranean Cupressaceae woodland, Evergreen woodlands of cypress (Cupressus sempervirens), junipers (Juniperus excelsa, J. foetidissima, J. drupacea, J. thurifera) or alerce (Tetraclinis articulata) with a usually open canopy with scrubby understorey and grassy field layer, on shallow, usually base-rich soils, in dry rocky situations scattered through the Mediterranean zone; G3.9c Macaronesian Junipers woodland, Evergreen woodlands of endemic macaronesian junipers (Juniperus turbinate ssp. canariensis, J. cedrus ssp. cedrus and ssp. maderensis, J. brevifolia) in diverse habitats as sometimes very small isolated populations, each with distinctive associated floras.

Implications for EFT classification:
10.11 Mediterranean yew stands (G3.9a), 10.7 Juniper forest (some) (G3.9b), 10.9 Cedar forest (G3.9b), 10.10 Tetraclinis articulata (G3.9b), 10.7 Juniper forest (some) (G3.9c)

Distribution based on integration Maxent prediction and high resolution data + distribution of vegetation relevés (right, G3.9a: Taxus baccata woodland; left, G3.9b: Mediterranean Cupressaceae woodland)
Boreal spruce or spruce-pine forests of Fennoscandia, northeastern Poland, the Baltic States, Belarus and European Russia, with G3.B constituting the westernmost section of the continuous Eurasian northern taiga belt.

Crosswalk to EFT Category / Type(s) (2010):
➢ 1. Boreal forest / 1.1 Spruce and spruce-birch boreal forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): Western Taiga (9010); Fennoscandian herb-rich forests with Picea abies (9050)
Descriptive or diagnostic parameters:
• Climate zones: Boreal
• Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
• Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees; Pine trees
• Cover characteristics (when used as criteria): Trees >10%
• Characteristics of wetness or dryness: Moist / mesic; Dry
• Related phytosociological units: Aconito septentrionalis-Piceion obovatae; Athyrio-Piceetalia; Piceion excelsae; Vaccinio-Piceetalia
Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Picea taiga woodland
Proposed new description: Woodland naturally dominated by spruce but frequently with an admixture of some Scot’s pine (Pinus sylvestris) and birch (Betula pendula and B. pubescens) on more mesic soils through the north-eastern continental and boreal regions, often with a subordinate deciduous broadleaf component in the canopy and understorey and rich and varied field-layer, mosses and lichens.
Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: PIC-01A, PIC-03A, PIC-05A
Distribution: not enough data to create a reliable model
Boreal pine forests of Fennoscandia, northeastern Poland, the Baltic States, Belarus and European Russia, with G3.A constituting the westernmost section of the continuous Eurasian northern taiga belt.

- Climate zones: Boreal
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees
- Cover characteristics (when used as criteria): Trees >10%
- Characteristics of wetness or dryness: Waterlogged; Wet and very wet; Seasonally wet

Criteria for Coniferous woodland (G3) to Level 3

Review of EUNIS Forest Habitat Classification (2013)
Proposed new name: Boreal bog conifer woodland
Proposed new description: Evergreen coniferous woodland, often open and low-growing, dominated by spruce (Picea abies, especially to the north) or Scot’s pine (Pinus sylvestris, more to the south) and sometimes forming extensive stands on peaty soils on or around bogs or in depressions kept moist by high ground water table, through the Boreal zone.

Implications for EFT classification: n/a
List of alliances to 2013 EuroVegChecklist: OXY-02B, PIC-05A, VAC-01A, VAC-01B, VAC-02A, VAC-03A
Distribution: no probability map produced

Woods of Pinus spp. or Picea spp., sometimes mixed with Betula pubescens, colonizing bogs and fens in the nemoral zone. Conifer-dominated bog woodland occurs mainly in the boreal and boreonemoral zones, but extends into the nemoral, wooded steppe and steppe zones.

Documentation on the integration of European Forest Types into the EUNIS Habitat Classification

---
EUNIS Level 3 (2004): G3.F — Highly artificial coniferous plantations
Plantations of exotic conifers or of European conifers out of their natural range, or of native species planted in clearly unnatural stands, typically as monocultures in situations where other species would naturally dominate.

Crosswalk to EFT Category / Type(s) (2010):
- 14 Introduced tree species forest

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)
Legally designated habitat (EU Habitats Directive Annex I): none
Descriptive or diagnostic parameters:
- Human activities and impacts: Forest planting; Artificial planting; Forest replanting; Anthropogenic impacts
- Levels of habitat usage (when used in criteria): Intensive use / disturbance
- Dominant life forms: Trees; Trees > 5m / tall trees; Coniferous trees
- Cover characteristics (when used as criteria): Trees >10%
- Spatial characteristics (when used in criteria): > 0.5 ha
Criteria for Coniferous woodland (G3) to Level 3

No review of EUNIS Forest Habitat Classification in 2013
EUNIS Level 2 (2004): G4 — Mixed deciduous and coniferous woodland

Forest and woodland of mixed broad-leaved deciduous or evergreen and coniferous trees of the nemoral, boreal, warm-temperate humid and mediterranean zones. They are mostly characteristic of the boreonemoral transition zone between taiga and temperate lowland deciduous forests, and of the montane level of the major mountainranges to the south. Neither coniferous, nor broadleaved species account for more than 75% of the crown cover. Deciduous forests with an understorey of conifers or with a small admixture of conifers in the dominant layer are included in unit G1. Conifer forests with an understorey of deciduous trees or with a small admixture of deciduous trees in the dominant layer are included in unit G3.

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004a)

Descriptive or diagnostic parameters:
- Human activities and impacts: Forestry practices; Forest planting; Artificial planting; Forest replanting
- Levels of habitat usage (when used in criteria): Low level use / disturbance; No human use
- Dominant life forms: Trees; Trees > 5m / tall trees; Mixed broadleaved and coniferous trees
- Cover characteristics (when used as criteria): Trees >10%

G4 EUNIS Habitat Classification: criteria for Mixed deciduous and coniferous woodland (G4) to Level 3

Explanatory notes:

(g23) Highly artificial mixed broadleaved deciduous and coniferous forests (often of exotic species and of uniform age and structure), completely dependent on man’s operations and with impoverished associated communities (path = Yes) are separated from less highly managed habitats. (g24) Habitats which are waterlogged (permanently wet, with the water table at or close to the surface) are separated (path = Yes) from those with other hydrological regimes. (g25) Coniferous woodland characteristic of the boreal zone with an admixture of other deciduous species (usually oaks); are separated from other mixed woodlands. (g26) The dominant species or species type separates three categories of mixed woodlands; those including broadleaved evergreens; those including Scots pine (Pinus sylvestris); and those where the species composition comprises other species. (g27) Mixed woodland habitats including broadleaved evergreen species are separated according to the main coniferous species present: with cypresses and yews (Cupressaceae or Taxaceae); with mixed pines other than Black pine (Pinus nigra); and those including Black pine (Pinus nigra). (g28) Mixed woodland habitats including Scots pine (Pinus sylvestris) are separated according to the main deciduous species present: those with oaks; those with beech; and those with birch. (g29) Woodland habitats characterised by a mixture of deciduous tree species and cypresses or yews (Cupressaceae or Taxaceae) are distinguished (path = Yes). (g30) Habitats characterised by a mixture of deciduous tree species and pines other than Black pine (Pinus nigra); and those including Black pine (Pinus nigra). (g31) Mixed woodland habitats including Scots pine (Pinus sylvestris) are separated according to the main deciduous species present: those with oaks; those with beech; and those with birch. (g32) Other mixed coniferous and deciduous woodland habitats are separated according to their species composition: those with only beech and fir or spruce are separated (path = Yes) from those with combinations of the deciduous species birch, aspen or rowan and occasionally some beech together with fir, spruce or pine.
EUNIS Level 3 (2004): G4.1 — Mixed swamp woodland
Broadleaved swamp woodland (G1.4 or G1.5) in combination with bog conifer woodland (G3.D or G3.E). Includes Pinus spp. or Picea spp. mixed with Betula pubescens, Alnus, Populus or Quercus.

Crosswalk to EFT Category / Type(s) (2010):

- Cover characteristics (when used as criteria): Trees >10%
- Spatial characteristics (when used in criteria): < 0.5 ha; linear feature

G5 EUNIS Habitat Classification: criteria for Lines of trees, small Anthropogenic woodlands, recently felled woodland, early-stage woodland and coppice (G5) to Level 3

Explanatory notes:
(g33) The dominant vegetation type separates three categories of these miscellaneous woodlands: trees under 5 m height (including young stages of forest re-growth or early colonisation by tree species, trees planted for early whole tree harvesting, such as Christmas trees, and coppice, where tree species are artificially maintained in the shrub phase); areas normally part of the forest area but very recently clear-felled and not yet restocked and with no succession to weedy vegetation or temporarily unstocked due to natural causes such as wind-throw, (path = no trees); or trees over 5 m height. (g34) Young plantations and woodlands maintained in the young stage through coppicing are separated (path = Yes) from stands of young trees arising from natural colonisation or forest regrowth. (g35) More or less continuous lines of trees and linear plantations comprising one to three distinct lines of trees, such as windbreaks and avenues, are separated from other small, intensively managed woods, small woods strongly influenced by anthropogenic activities and small plantations. Small woodlands are those up to about 0.5 ha in extent. Tree cover may often comprise completely or partially non-native species. (g36) Small anthropogenic woods and small plantations (less than about 0.5 ha in extent) are characterised by the dominant tree types, which may be mixtures of species within the categories broadleaved deciduous; broadleaved evergreen; coniferous; and mixed broadleaved and coniferous. Small natural and semi-natural woodlands are characterised with their larger counterparts in G1 – G4. Note that broadleaved woodland is defined as wooded land on which more than 75% of the tree crown cover consists of broadleaved species and that coniferous woodland is defined as wooded land on which more than 75% of the tree crown cover consists of coniferous species (based on FAO definition). Mixed woodland is defined as wooded land on which neither coniferous, nor broadleaved species account for more than 75% of the crown cover.
EUNIS Level 3 (2004): G5.1 — Lines of trees
More or less continuous lines of trees forming strips within a matrix of grassy or cultivated land or along roads, typically used for shelter or shading. Lines of trees differ from hedgerows (FA) in being composed of species that can grow to at least 5 m in height and are not regularly cut down to a height below 5 m.

- Cover characteristics (when used as criteria): Trees > 10%
- Related phytosociological units: Betulion pubescentis; Ledo-Pinion; Quercetea pubescentis; Querco-Fagetea; Rhamno-Prunetea; Vaccinio-Piceetea

Criteria for Lines of trees, small anthropogenic woodlands, recently felled woodland, early-stage woodland and coppice (G5) to Level 3

No review of EUNIS Forest Habitat Classification in 2013
EUNIS Level 3 (2004): G5.7 — Coppice and early-stage plantations
Woodland treated as coppice without standards. Plantations with a dominant canopy of young trees that are still less than 5 m in height. Plantations of dwarf trees or shrubs cultivated for wood or small-tree production, with a regular whole-plant harvesting regime, including short-rotation Salix beds for biomass production, Christmas tree crops, tree nurseries.

Crosswalk to EFT Category / Type(s) (2010):

- No correspondence given

EUNIS Forest Habitat Classification (2004)
Source: Hill, M.O., Moss, D. & Davies, C.E. (2004b)
Legally designated habitat (EU Habitats Directive Annex I): none
Descriptive or diagnostic parameters:
- Human activities and impacts: Whole plant harvesting; Forestry practices; Forest planting; Artificial planting; Forest replanting; Coppicing; Anthropogenic impacts
- Levels of habitat usage (when used in criteria): Intensive use / disturbance
- Dominant life forms: Trees; Trees < =5m / low trees
- Cover characteristics (when used as criteria): Trees >10%
Criteria for Lines of trees, small anthropogenic woodlands, recently felled woodland, early-stage woodland and coppice (G5) to Level 3

No review of EUNIS Forest Habitat Classification in 2013

Documentation on the integration of European Forest Types into the EUNIS Habitat Classification
EUNIS Level 3 (2004): G5.8 — Recently felled areas
Land that recently has supported deciduous or coniferous woodland after the trees have been clear-felled or burnt. Includes woodland with successional vegetation dominated by tall herbs, grasses or shrubs, provided that these will soon be overtopped by a tree canopy.
