1 Austria

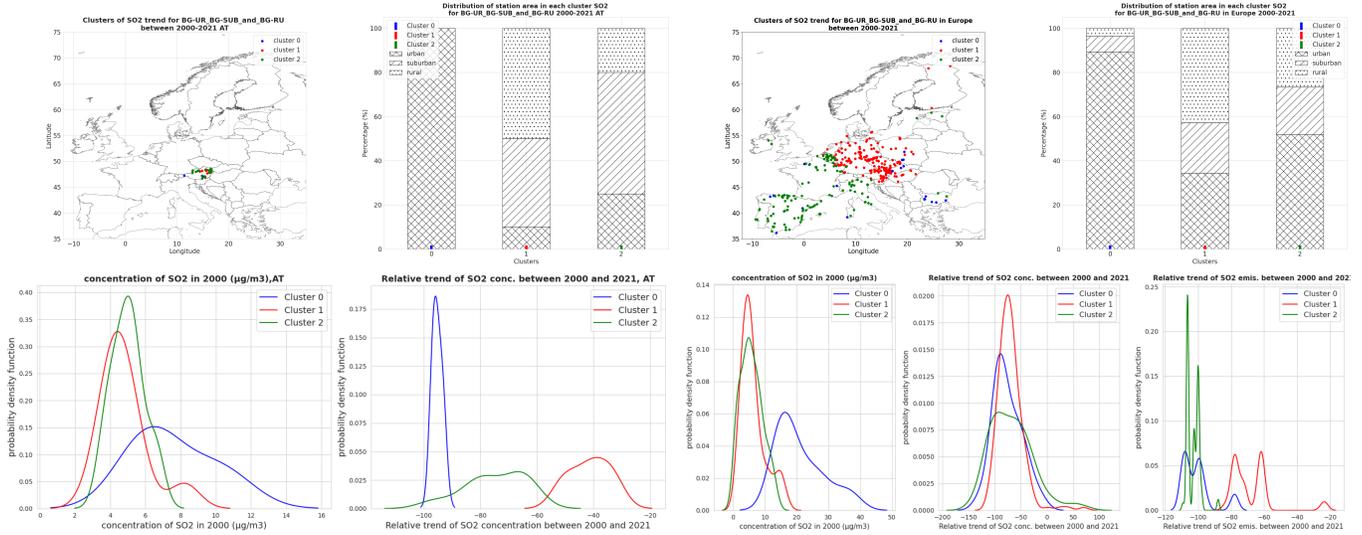

Figure A4.1: Clustering of the Austria (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of SO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

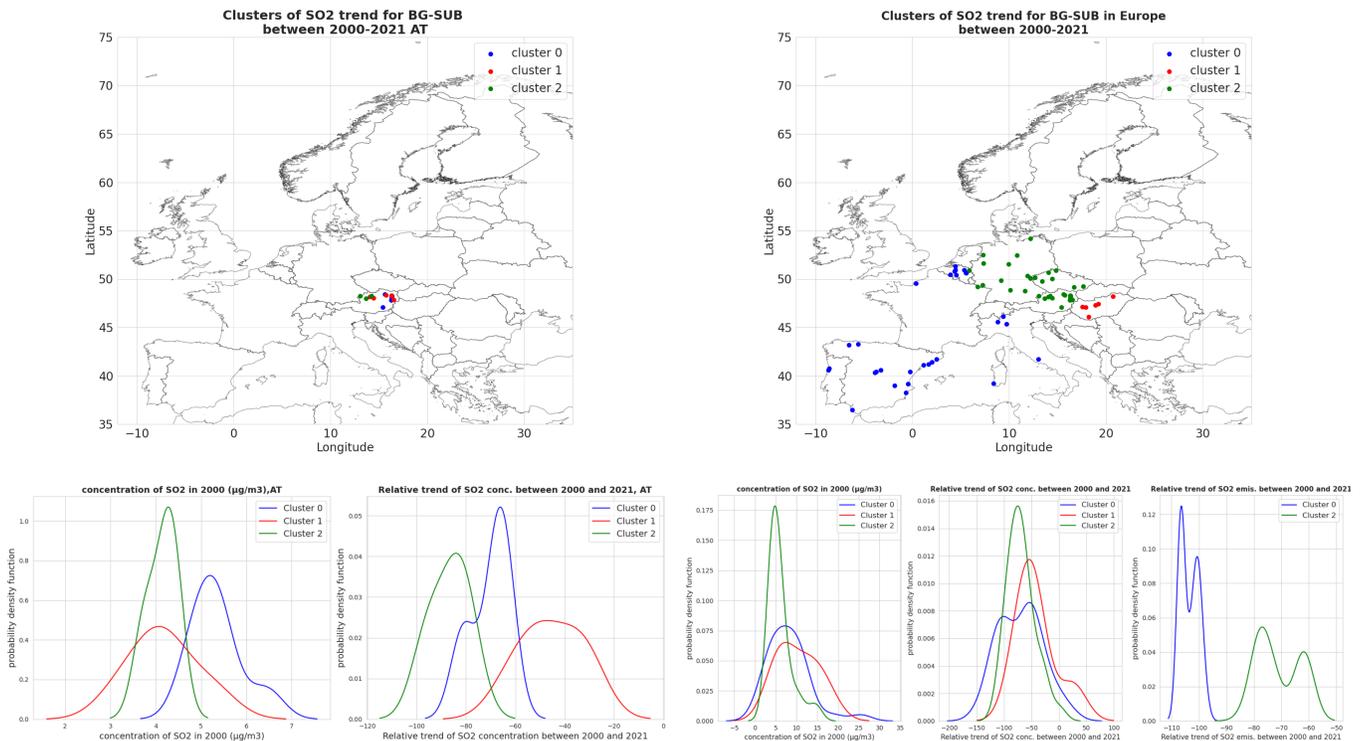

Figure A4.2: Clustering of the Austria (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-SUB typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

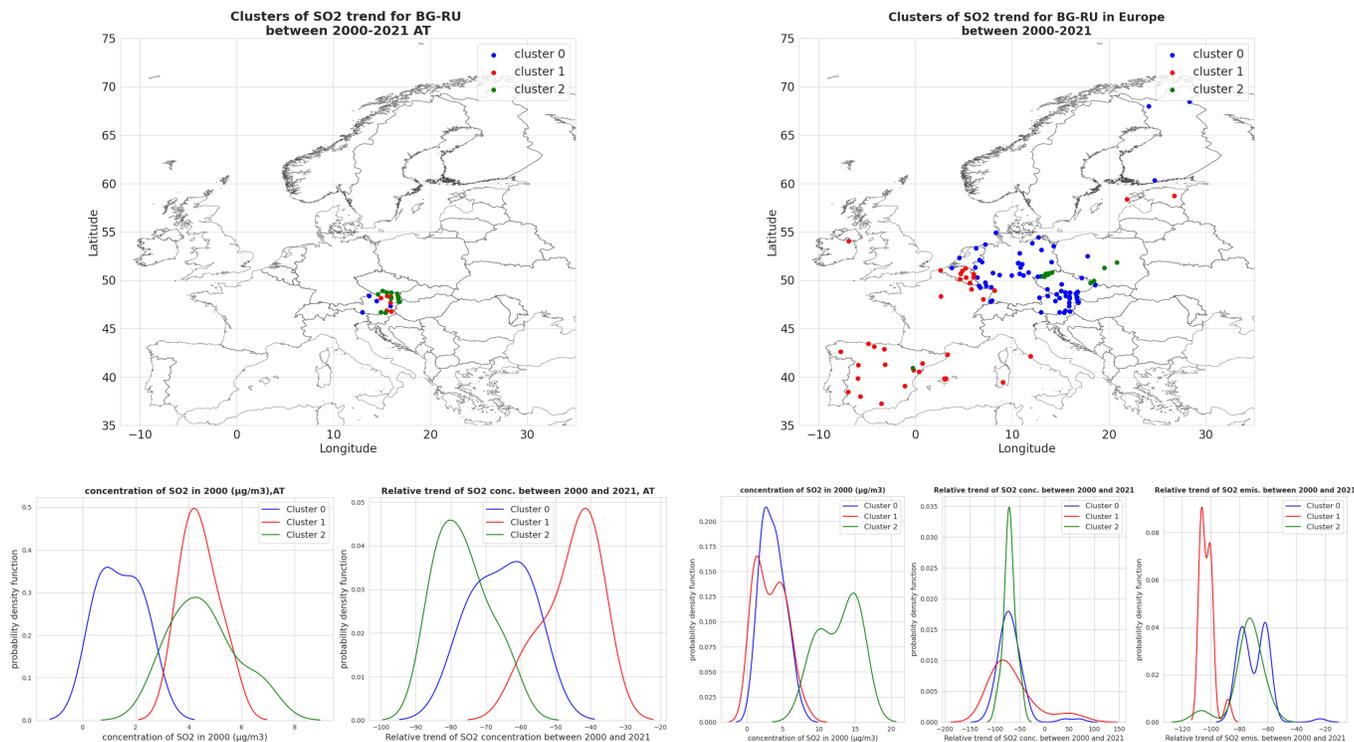

Figure A4.3: Clustering of the Austria (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

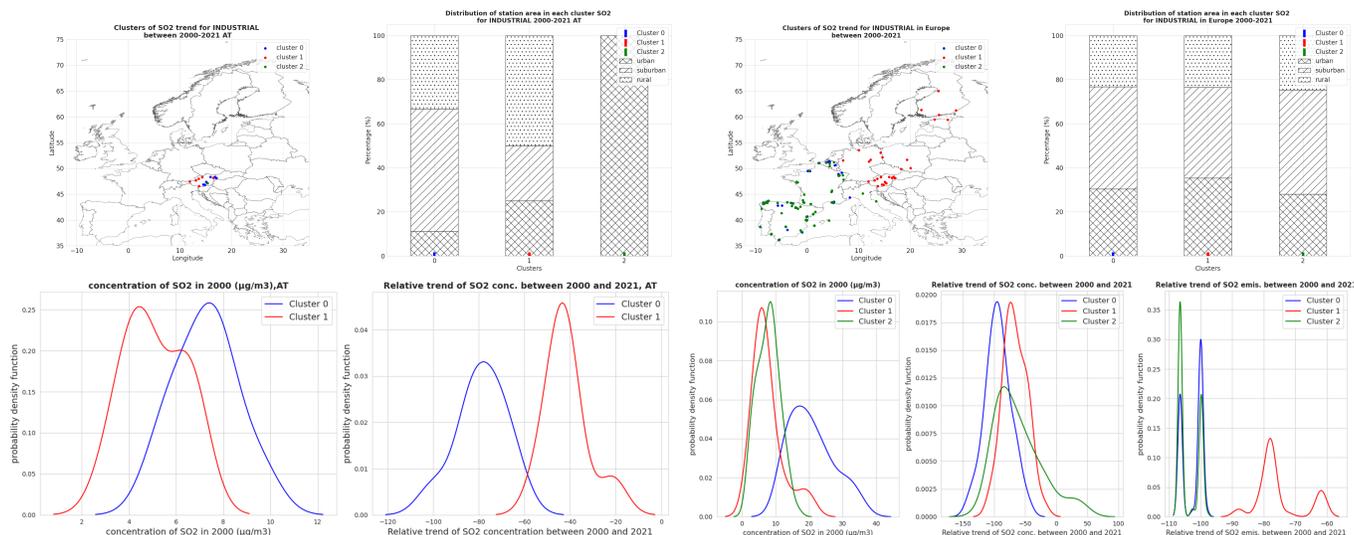

Figure A4.4: Clustering of the Austria (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of INDUSTRIAL typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

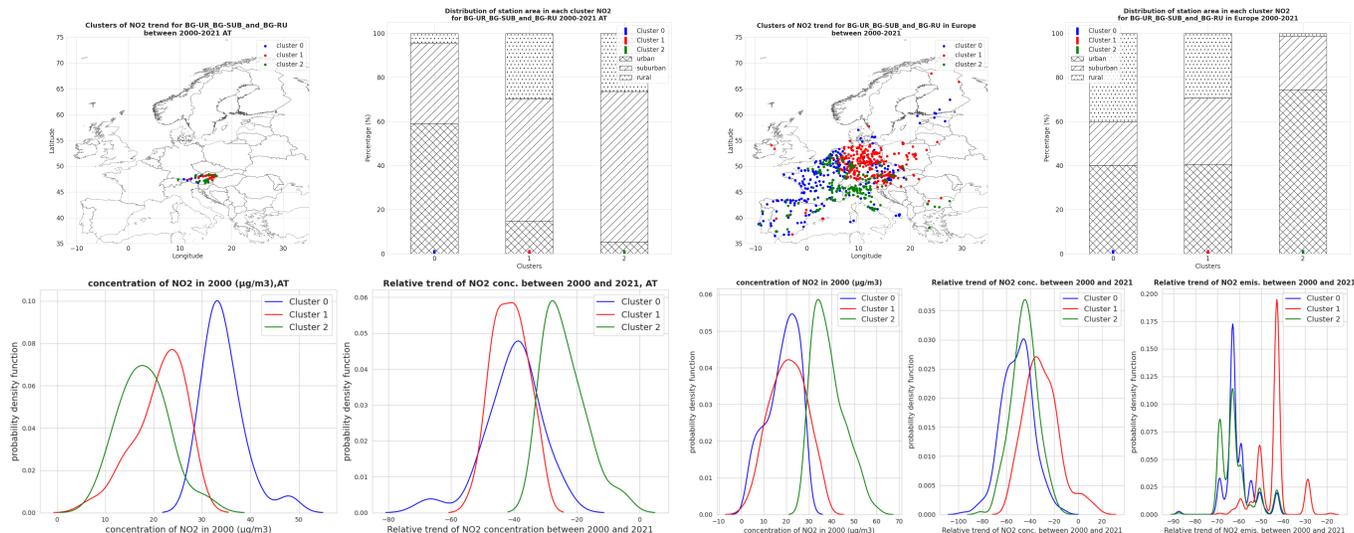

Figure A4.5: Clustering of the Austria (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

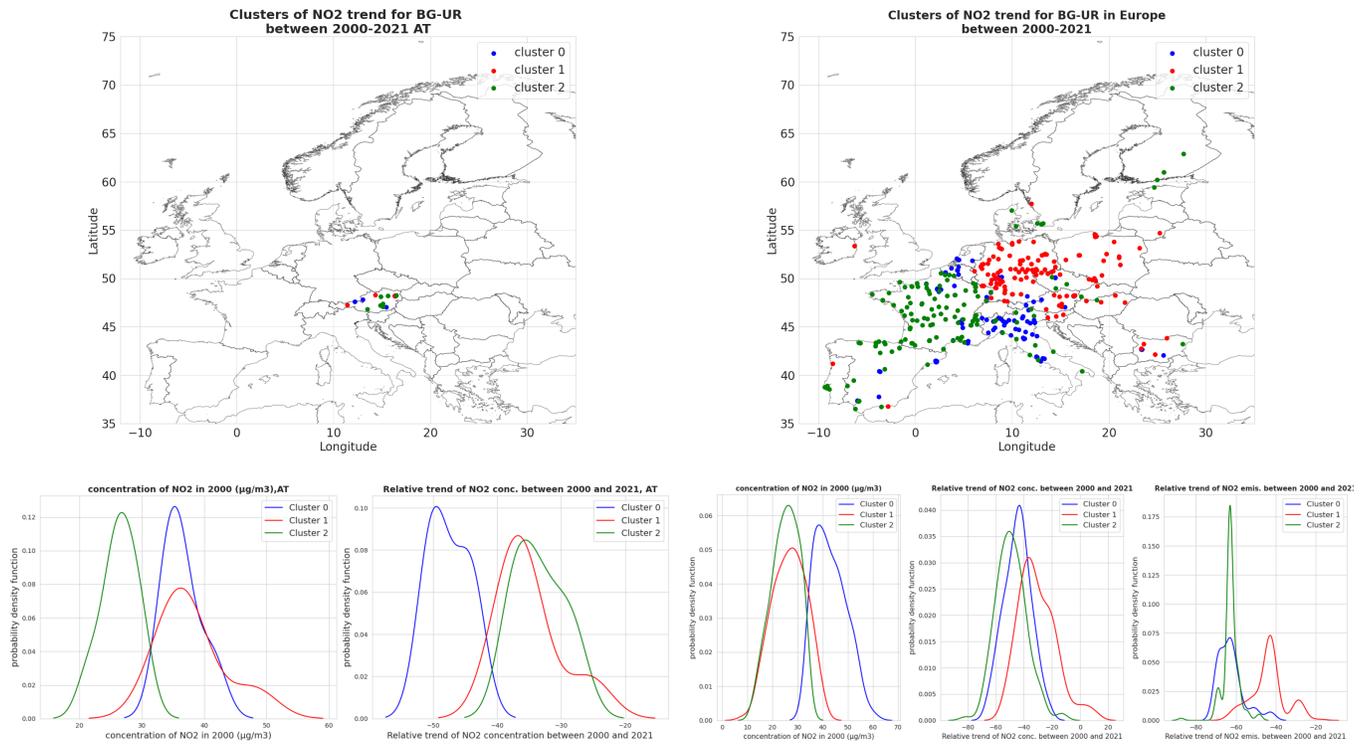

Figure A4.6: Clustering of the Austria (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

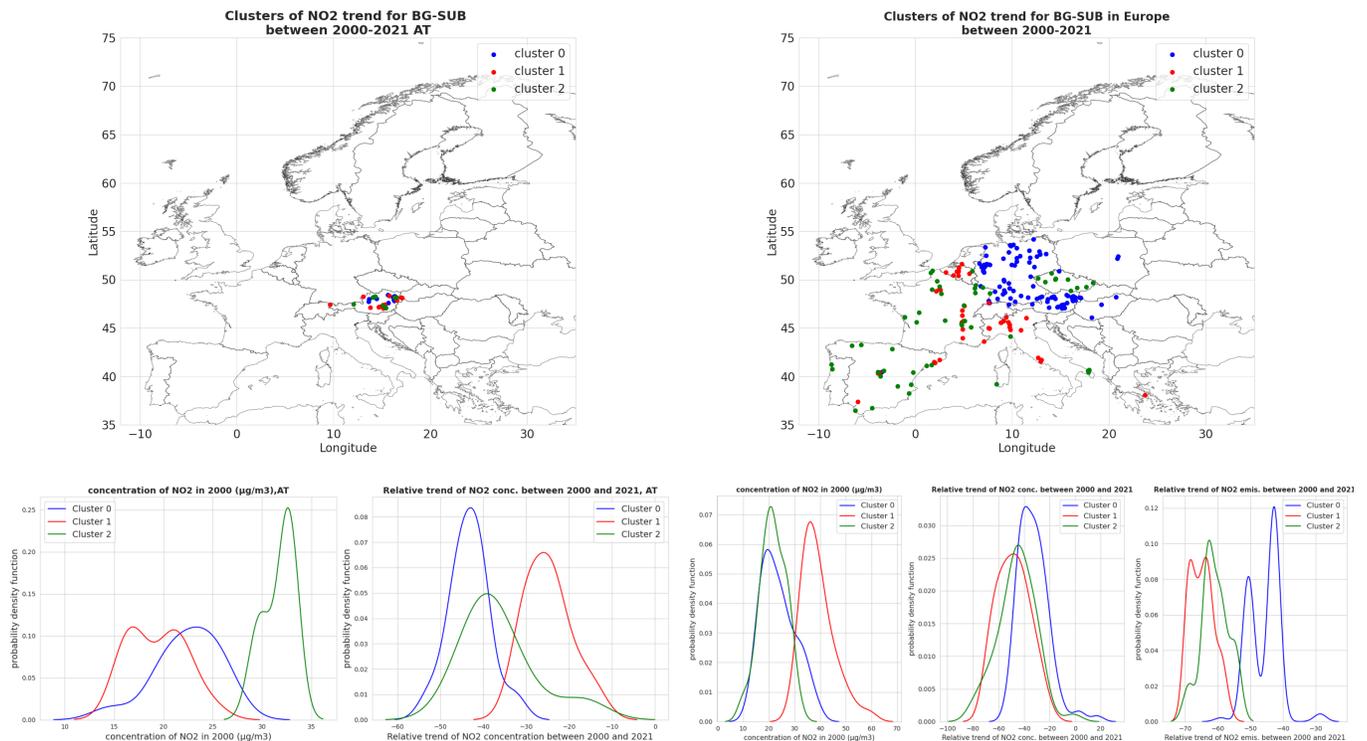

Figure A4.7: Clustering of the Austria (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-SUB typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

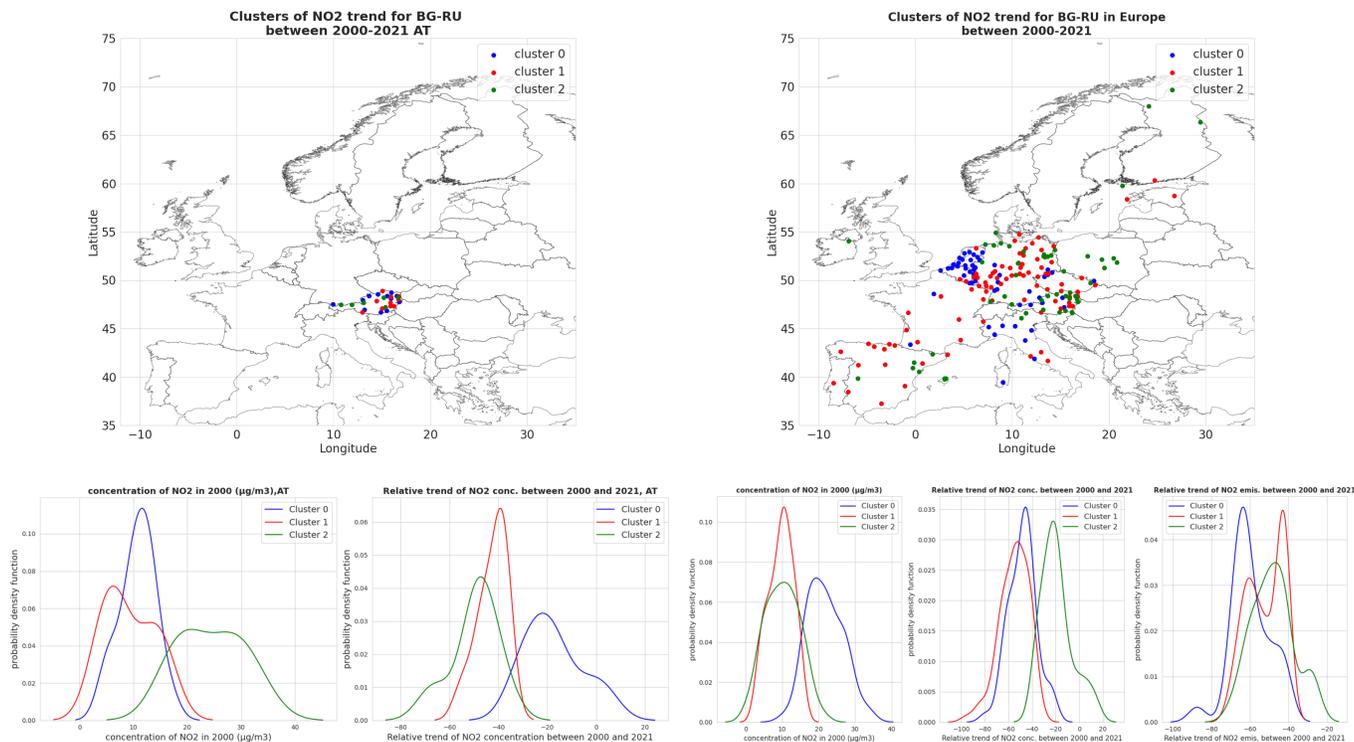

Figure A4.8: Clustering of the Austria (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

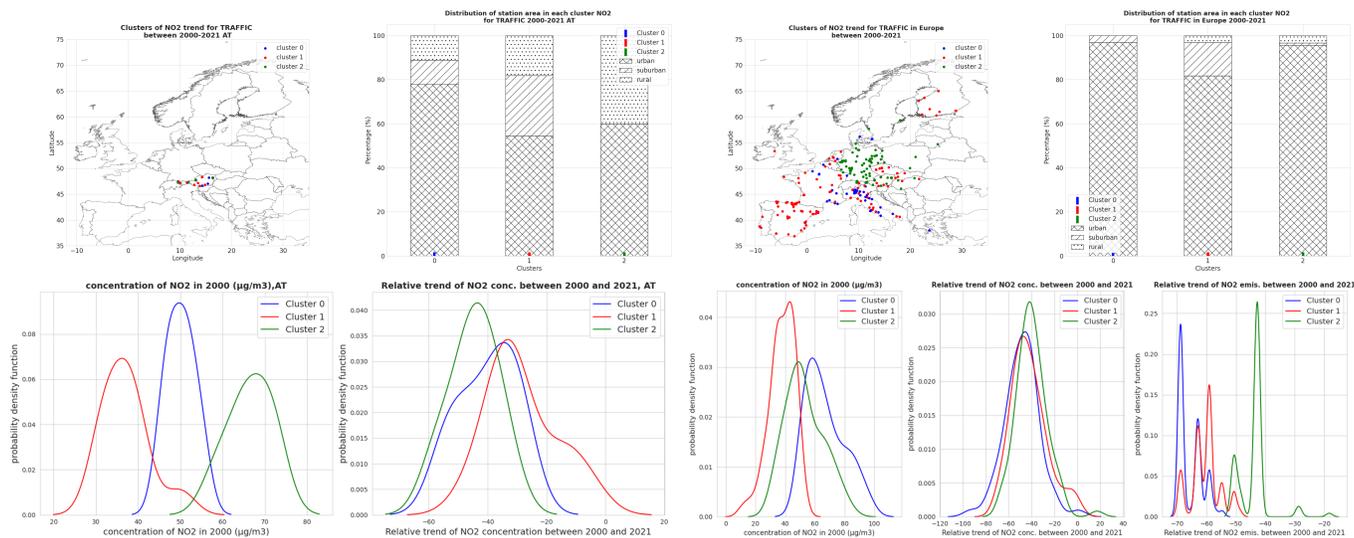

Figure A4.9: Clustering of the Austria (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of TRAFFIC typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

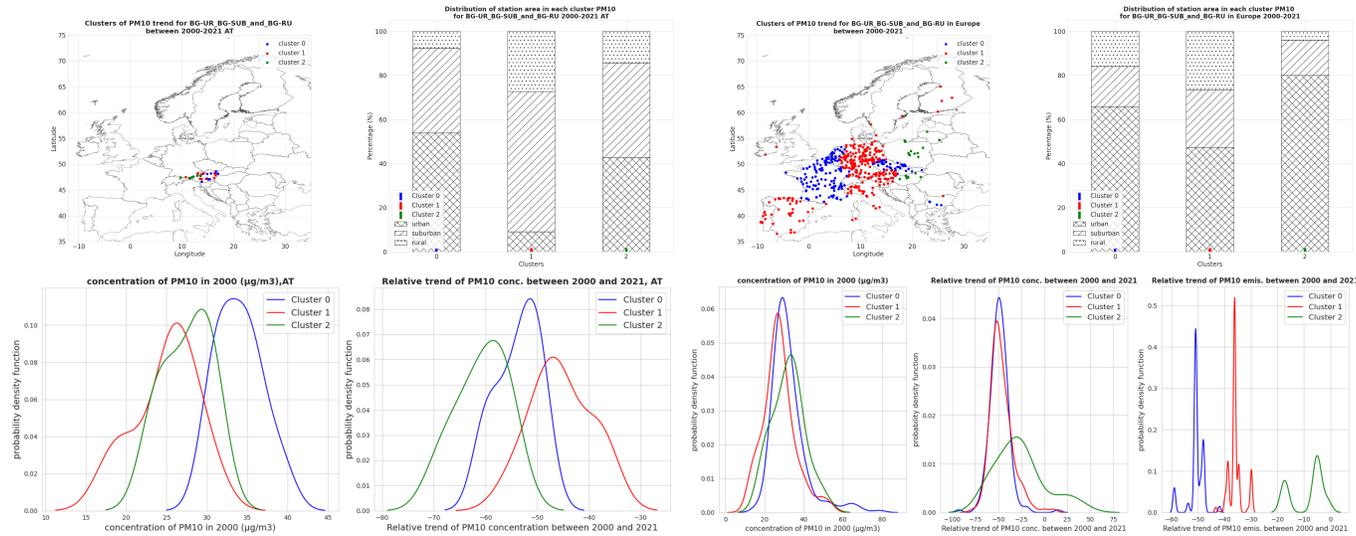

Figure A4.10: Clustering of the Austria (left) and European-wide (right) trends of PM₁₀ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM₁₀ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM₁₀ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM₁₀ emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

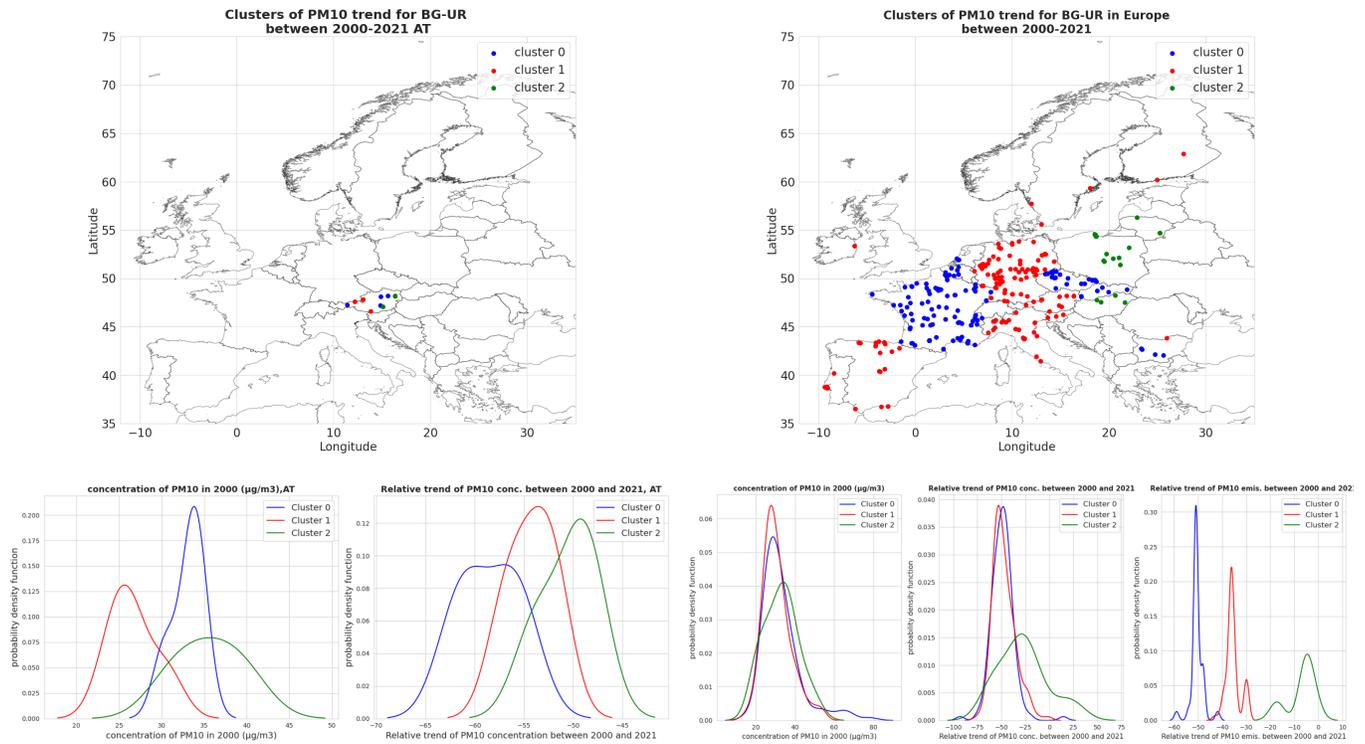

Figure A4.11: Clustering of the Austria (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

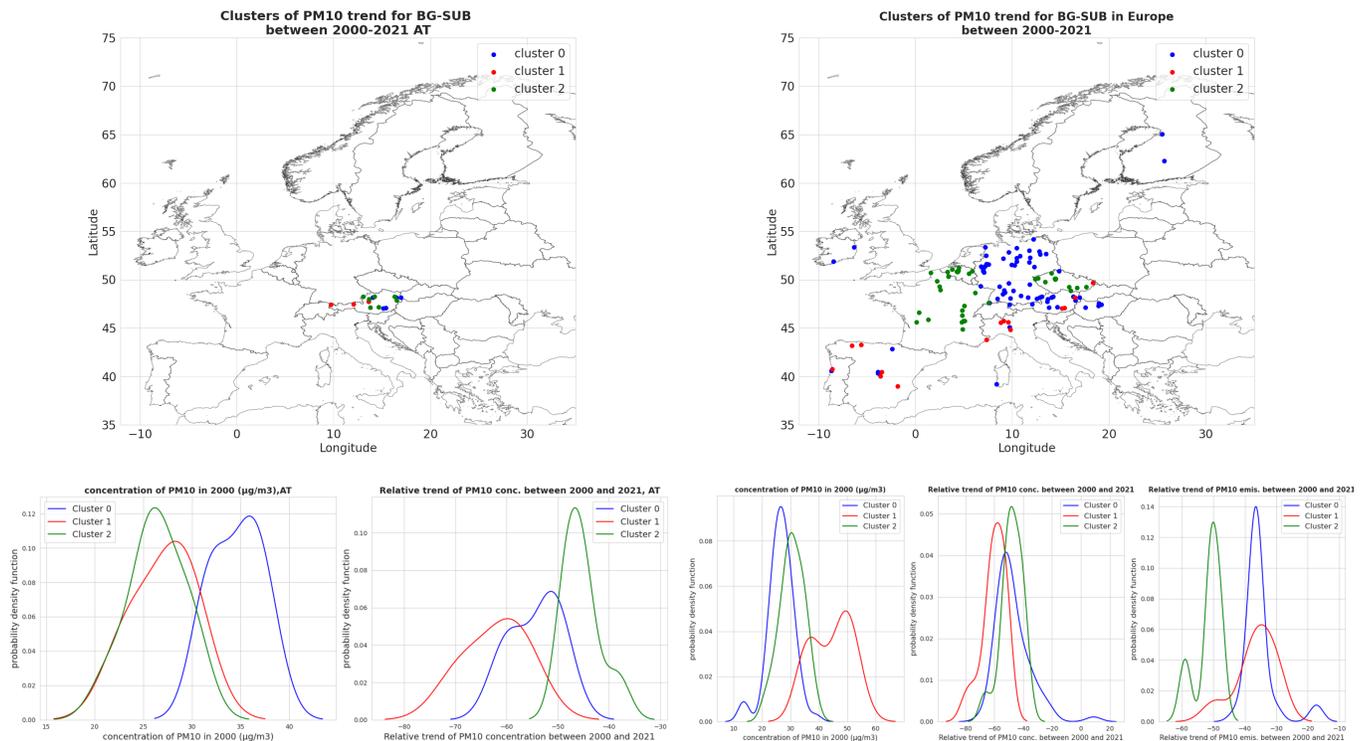

Figure A4.12: Clustering of the Austria (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-SUB typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

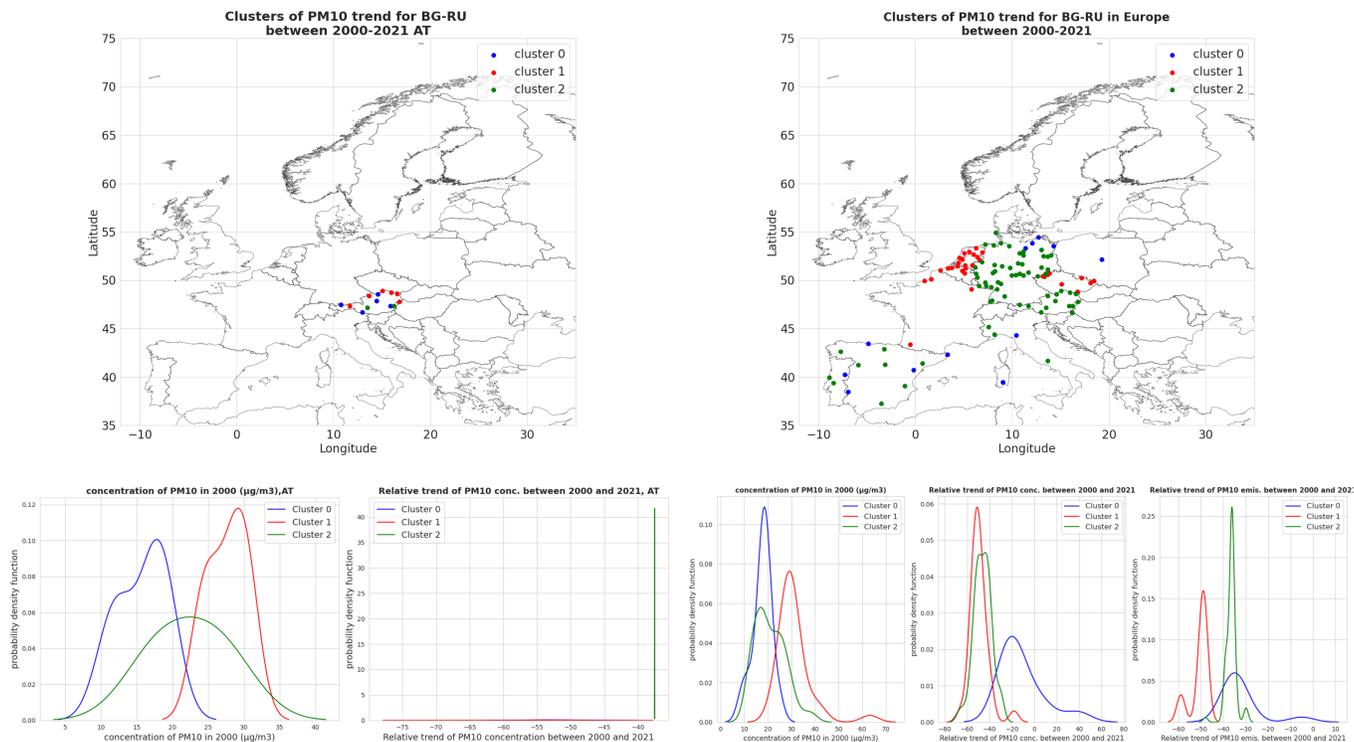

Figure A4.13: Clustering of the Austria (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

2 Belgium

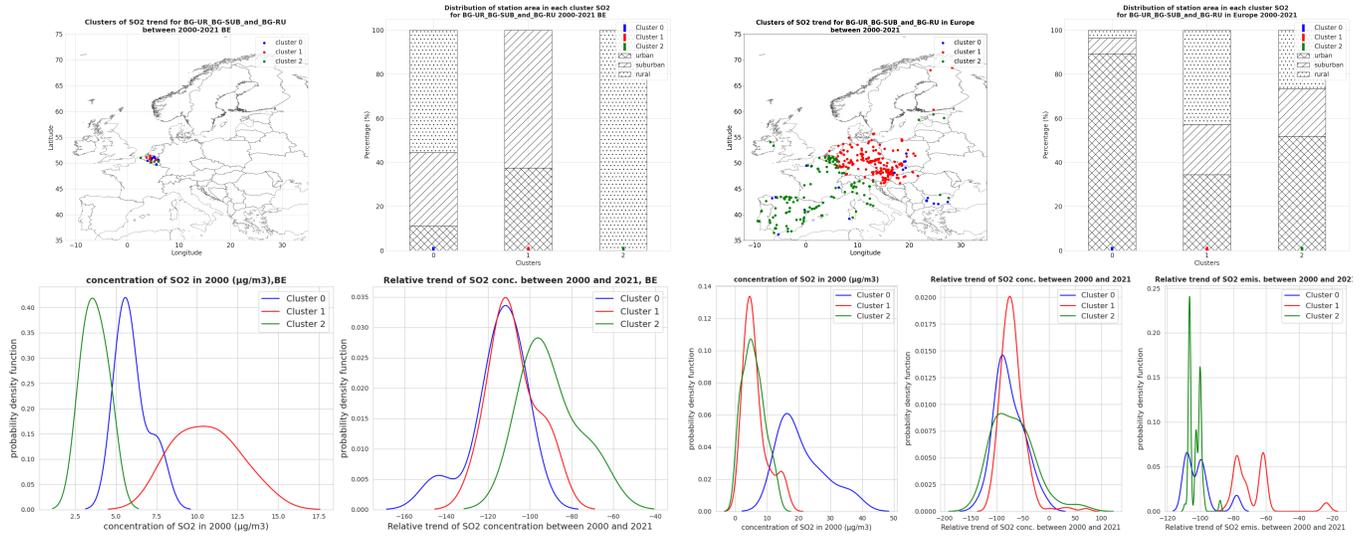

Figure A4.14: Clustering of the Belgium (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of SO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

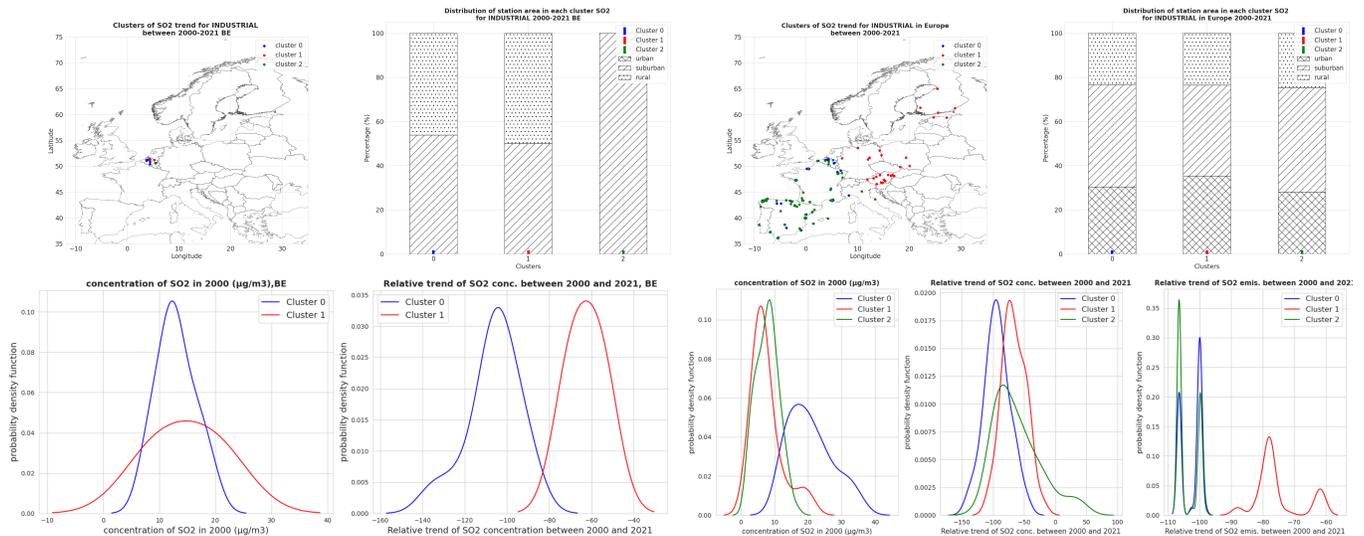

Figure A4.15: Clustering of the Belgium (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of INDUSTRIAL typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

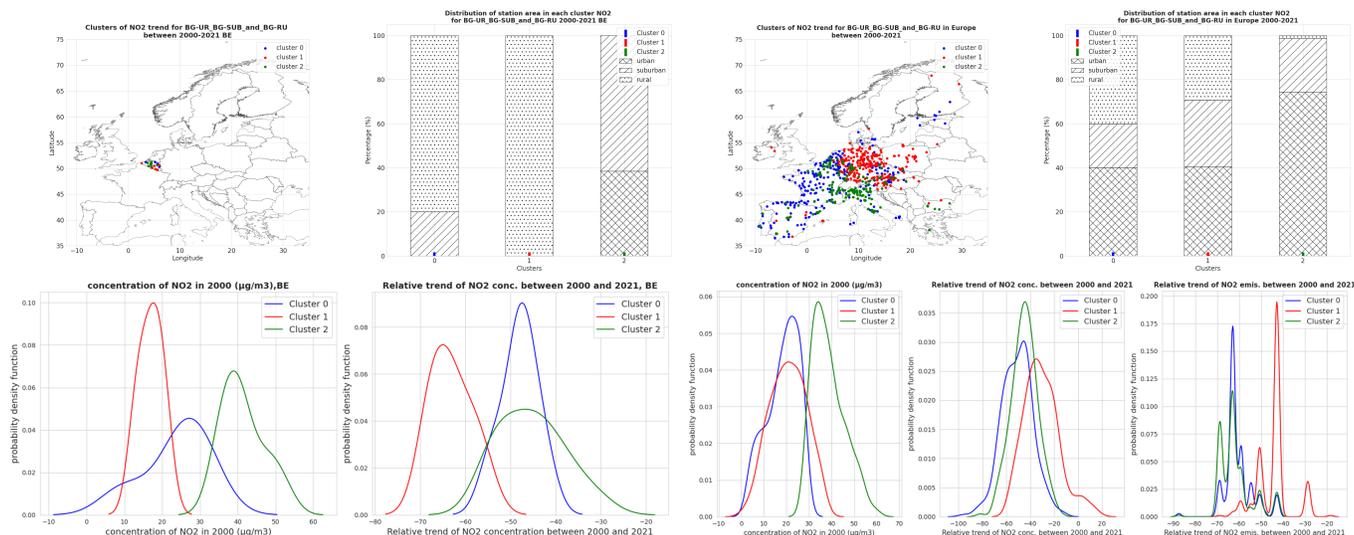

Figure A4.16: Clustering of the Belgium (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

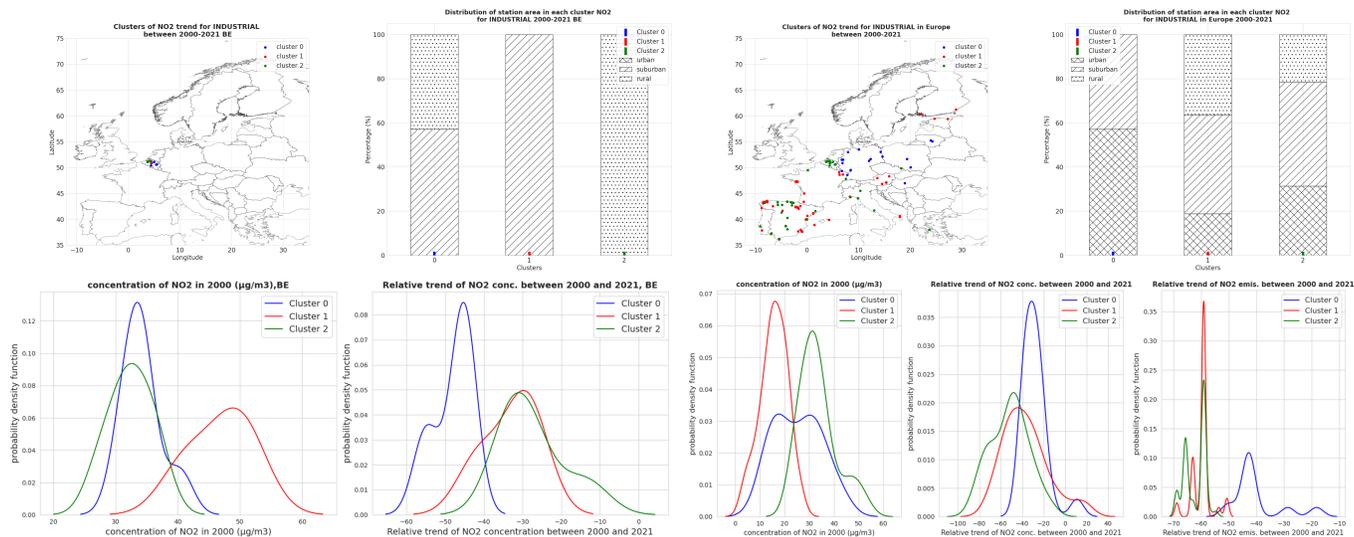

Figure A4.17: Clustering of the Belgium (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of INDUSTRIAL typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

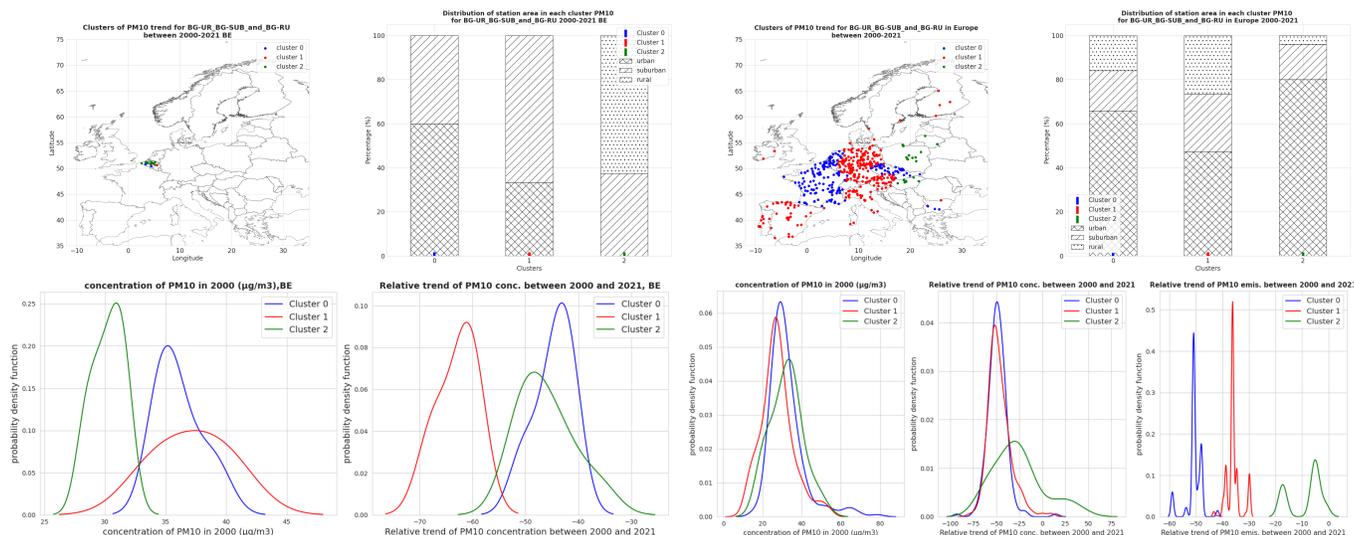

Figure A4.18: Clustering of the Belgium (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM10 emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

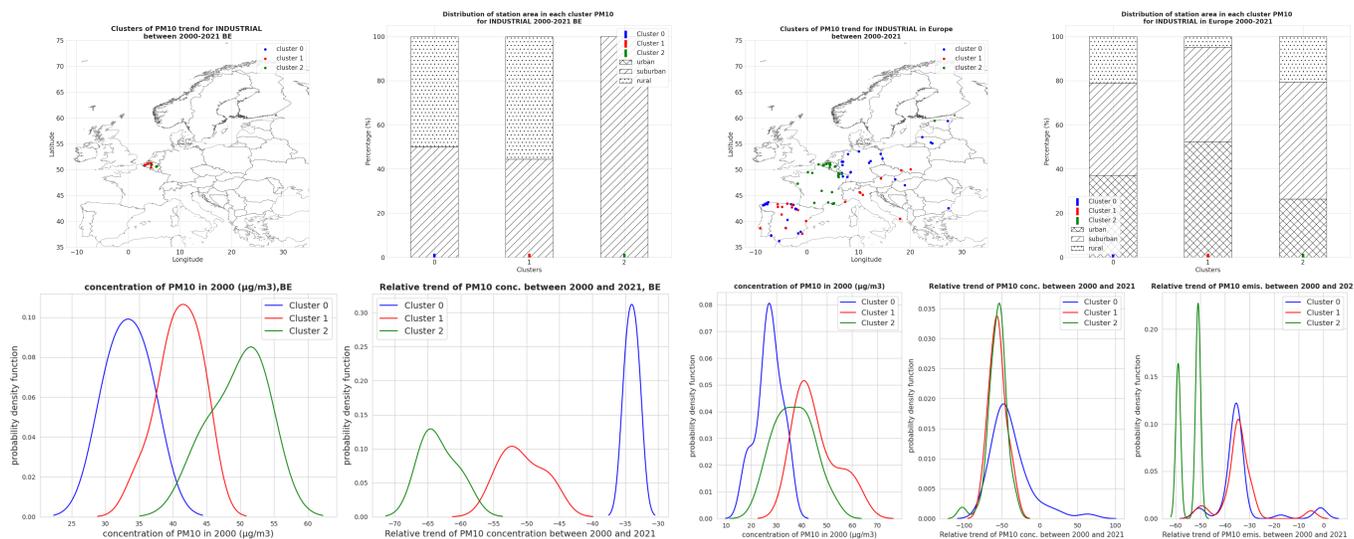

Figure A4.19: Clustering of the Belgium (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of INDUSTRIAL typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

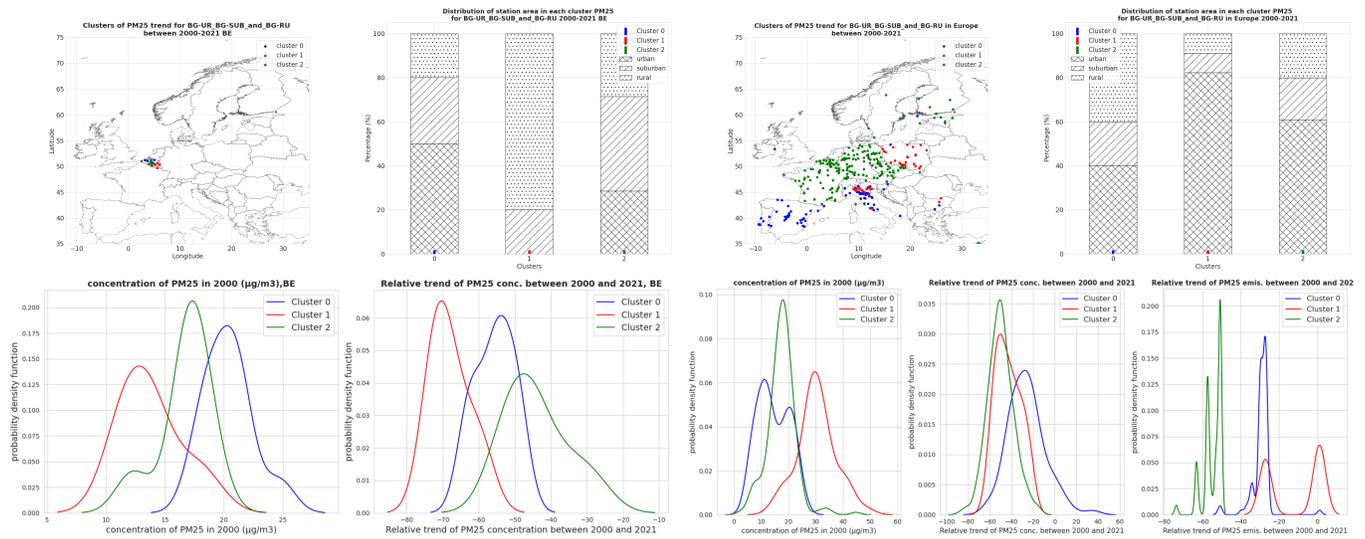

Figure A4.20: Clustering of the Belgium (left) and European-wide (right) trends of PM₂₅ ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM₂₅ ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM₂₅ ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM₂₅ emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

3 Bulgaria

The minimum number of stations required to assess the country-wise clustering is not met.

4 Switzerland

The minimum number of stations required to assess the country-wise clustering is not met.

5 Czechia

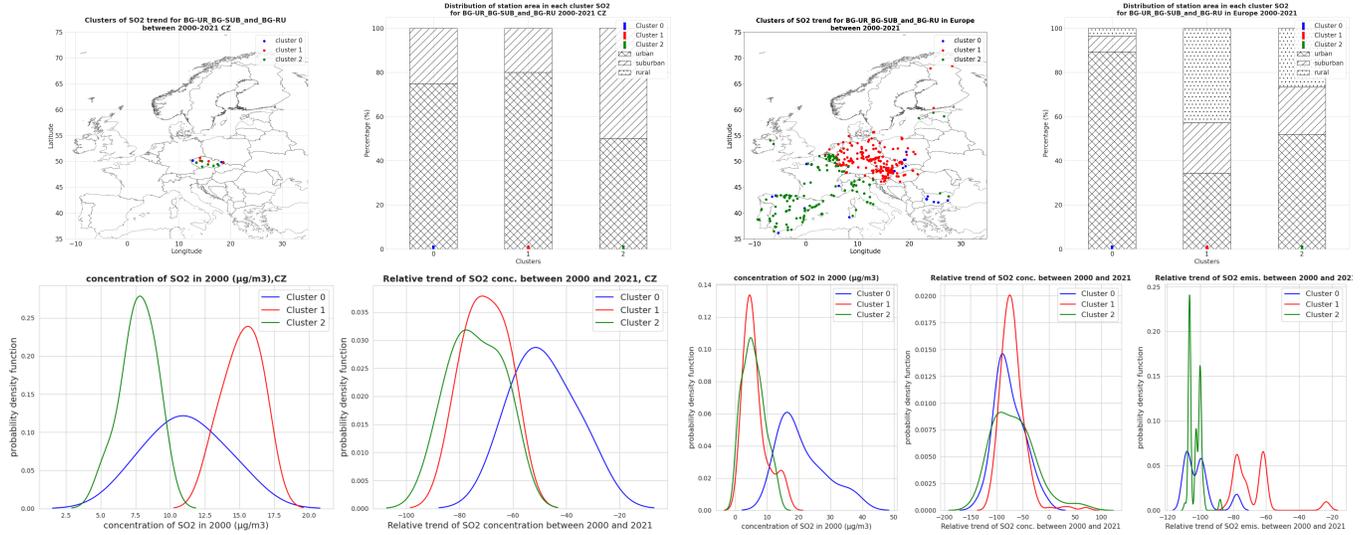

Figure A4.21: Clustering of the Czechia (left) and European-wide (right) trends of SO₂ (µg/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of SO₂ (µg/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of SO₂ (µg/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of SO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

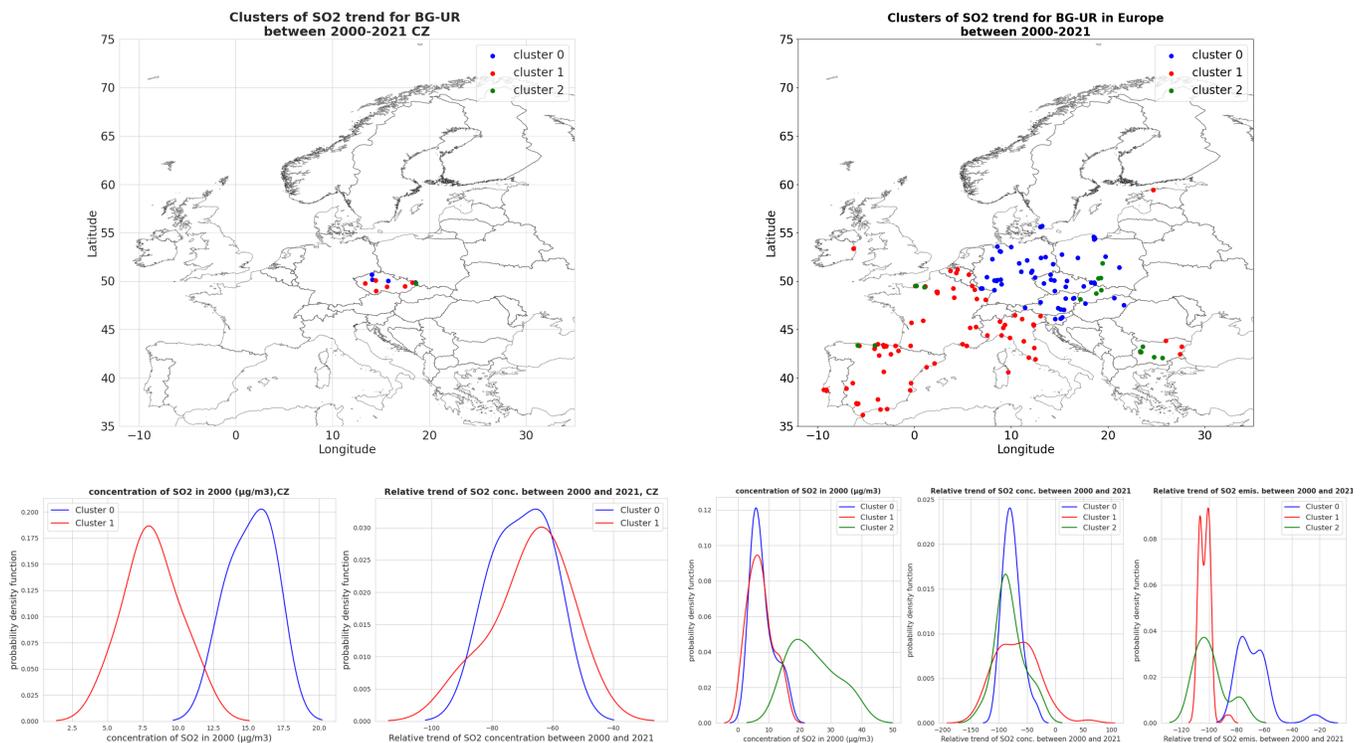

Figure A4.22: Clustering of the Czechia (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

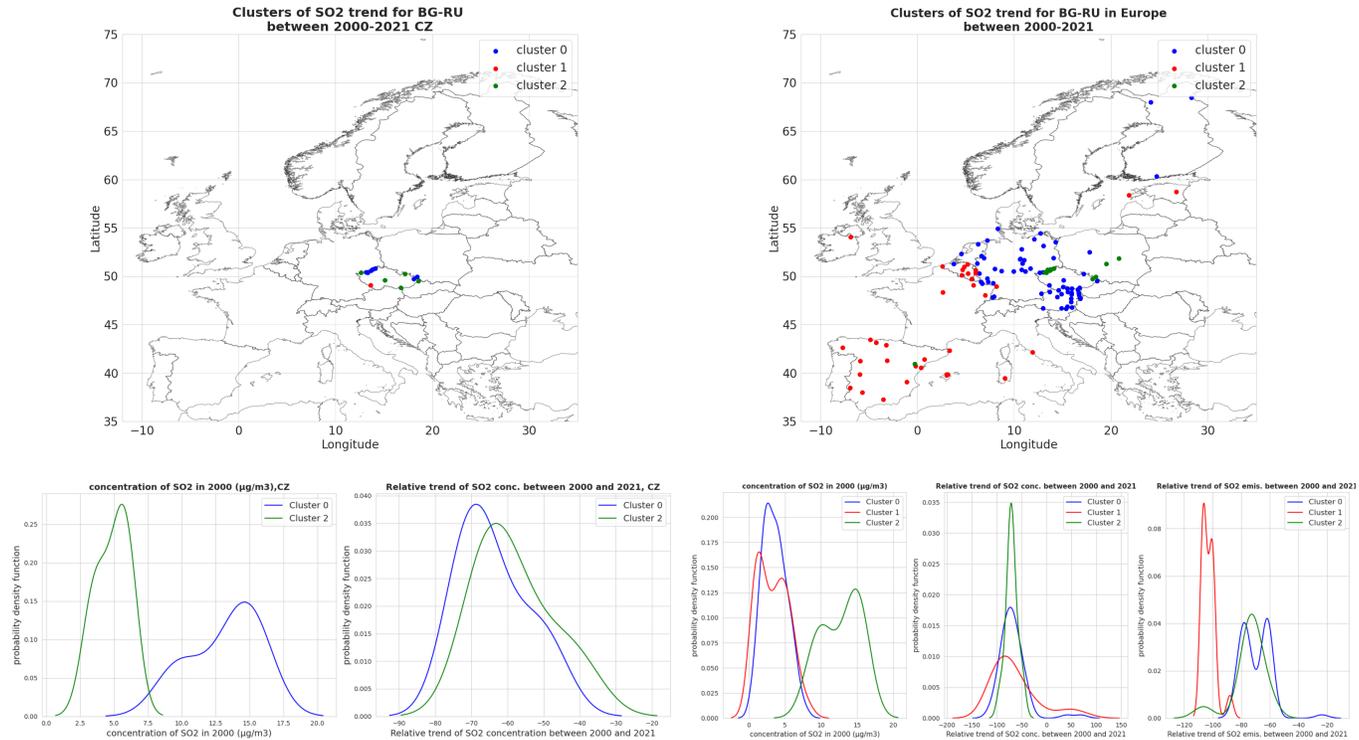

Figure A4.23: Clustering of the Czechia (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

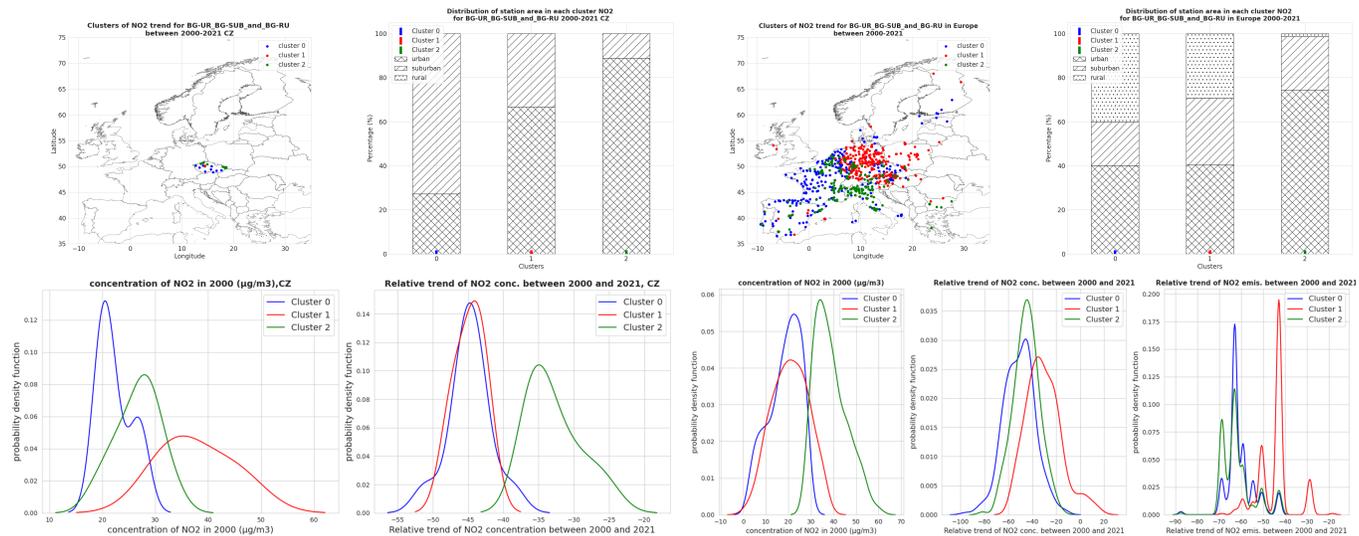

Figure A4.24: Clustering of the Czechia (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right: distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

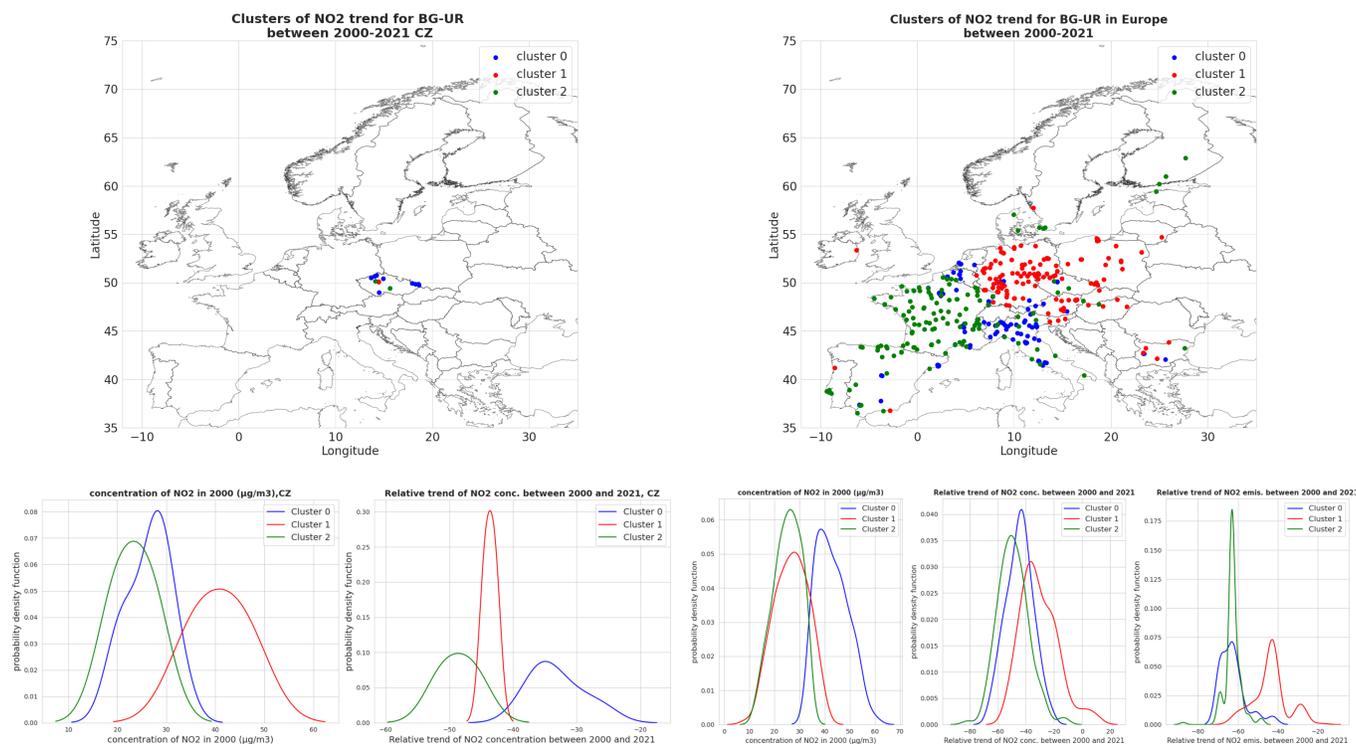

Figure A4.25: Clustering of the Czechia (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

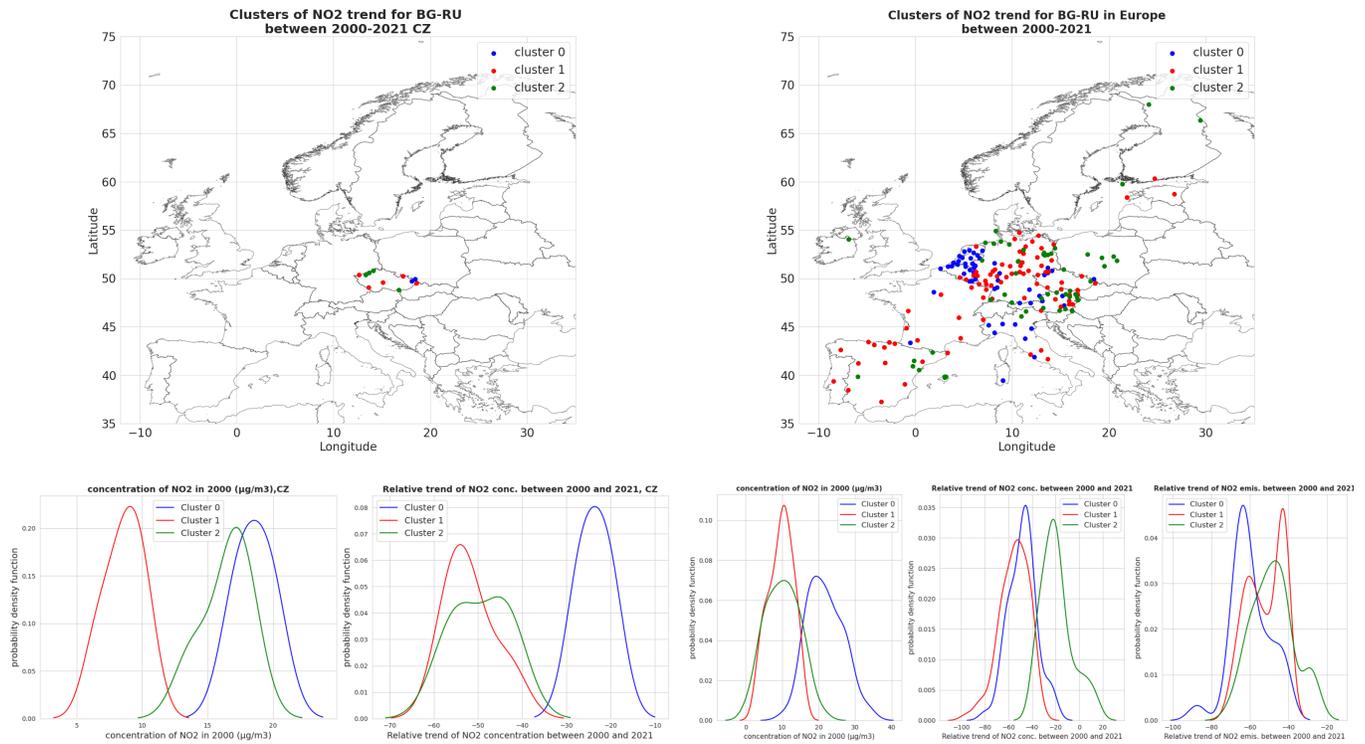

Figure A4.26: Clustering of the Czechia (left) and European-wide (right) trends of NO₂ ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of NO₂ ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

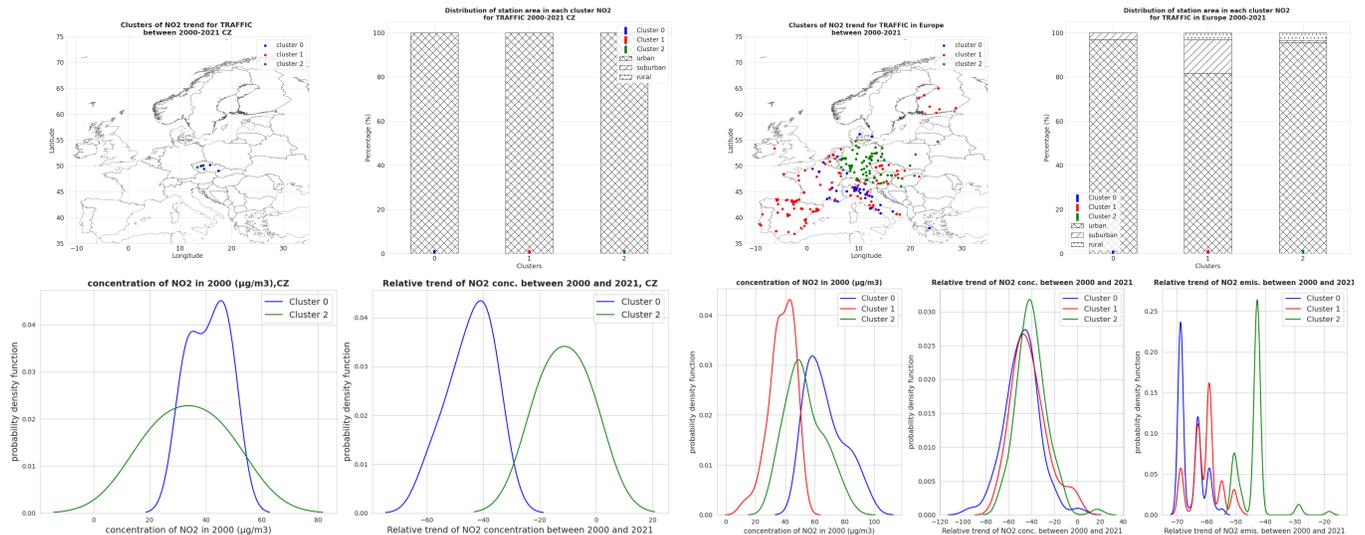

Figure A4.27: Clustering of the Czechia (left) and European-wide (right) trends of NO₂ ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of TRAFFIC typology in each of the three clusters. Bottom: distribution of NO₂ ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

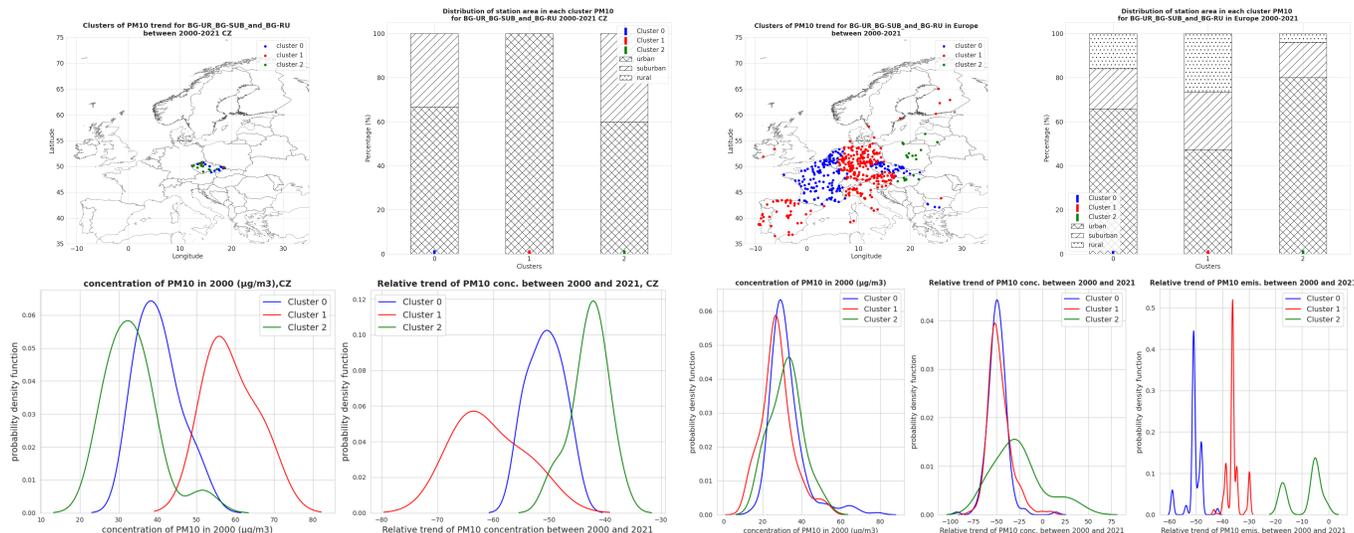

Figure A4.28: Clustering of the Czechia (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM10 emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

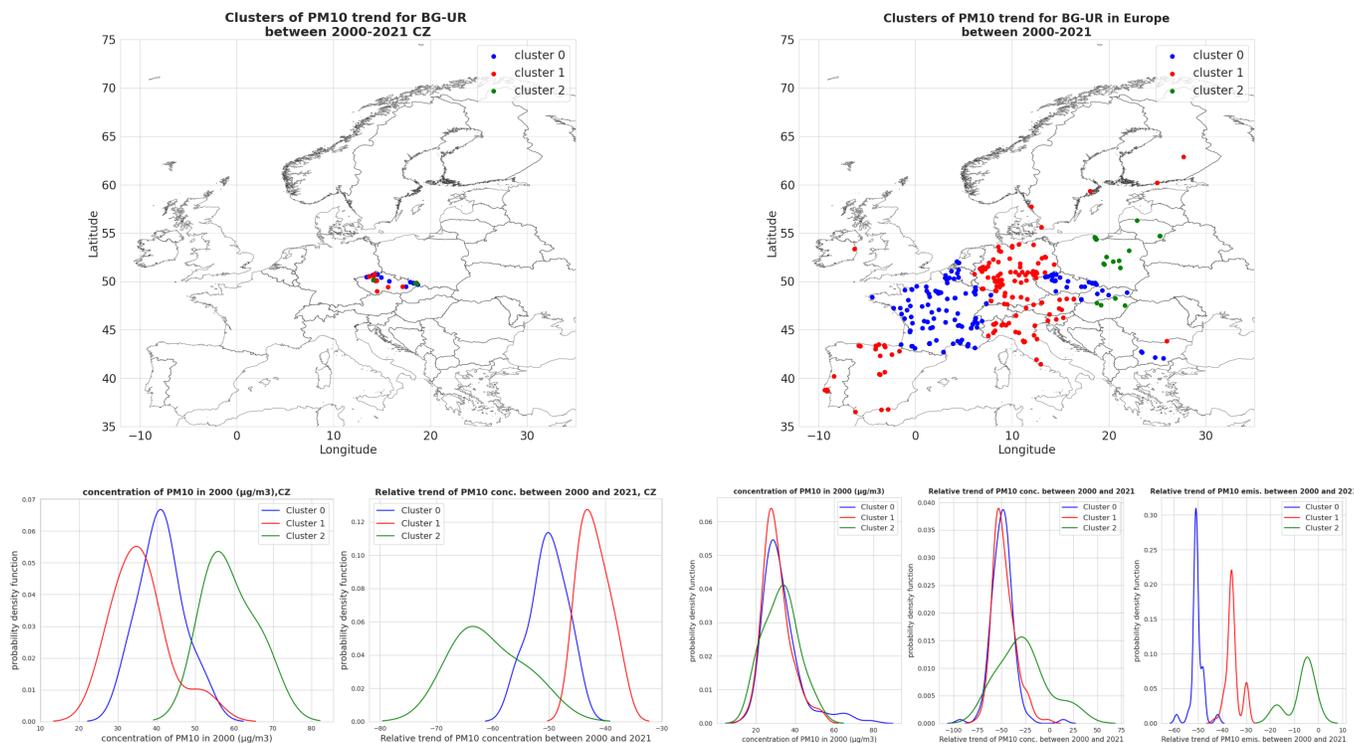

Figure A4.29: Clustering of the Czechia (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

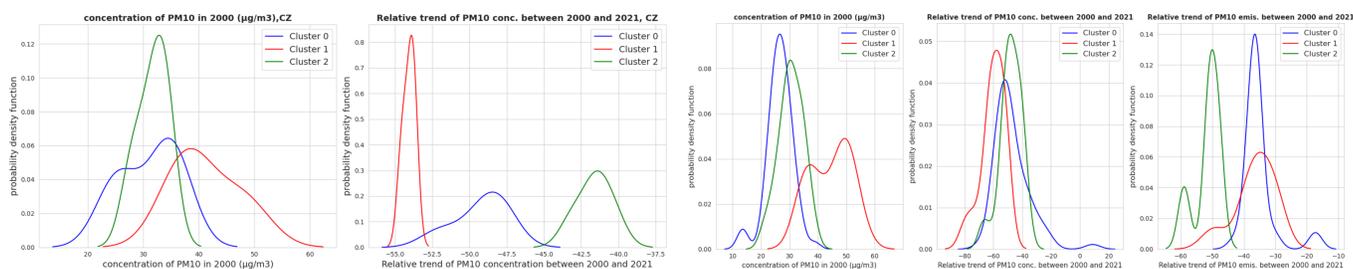

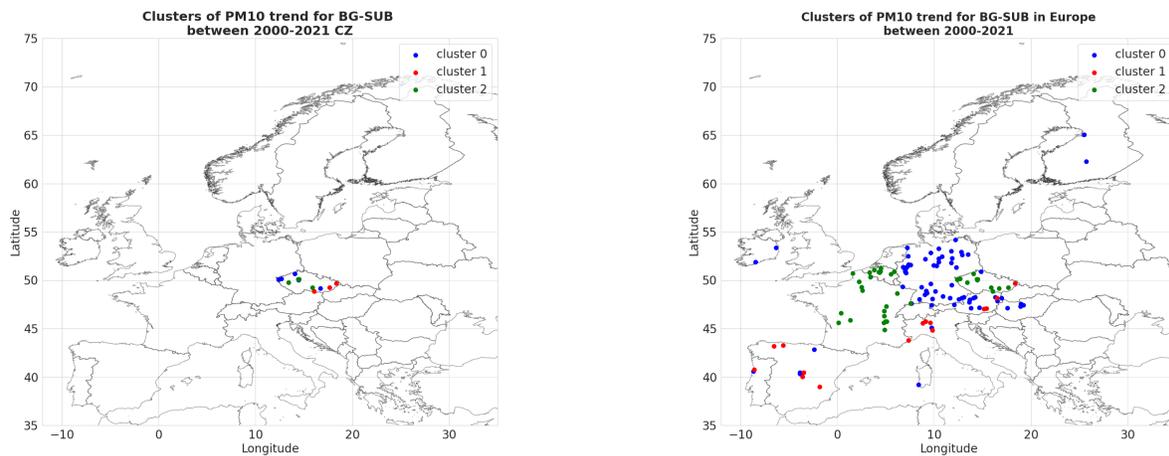

Figure A4.30: Clustering of the Czechia (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-SUB typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

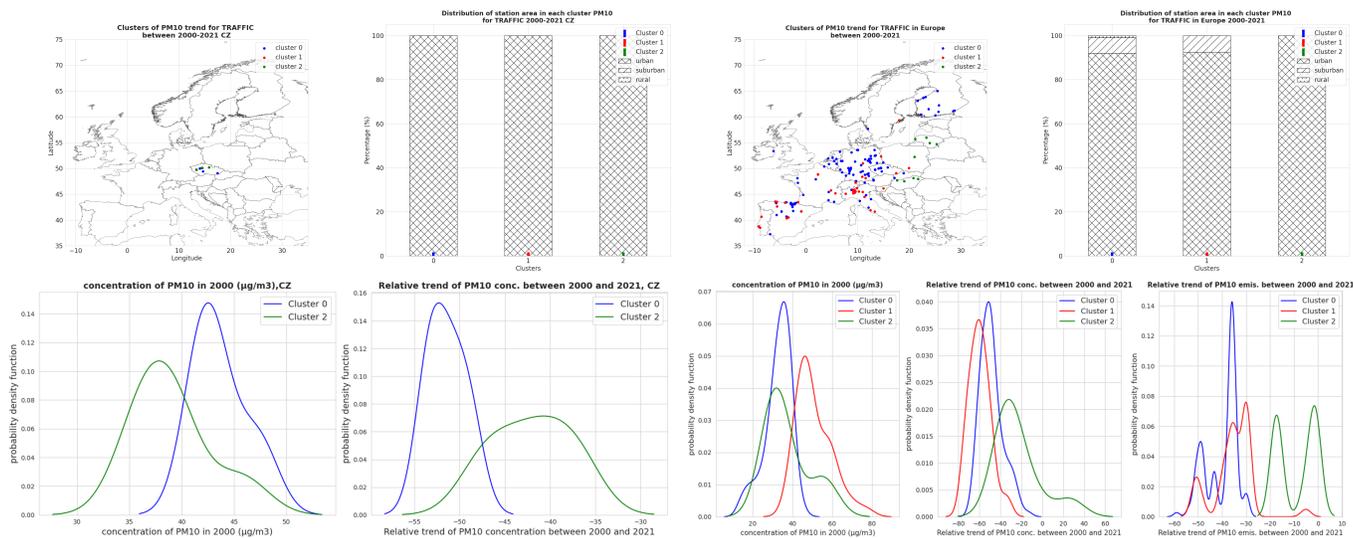

Figure A4.31: Clustering of the Czechia (left) and European-wide (right) trends of PM10 (ug/m3) trends applied to stations in Europe. Top: distribution of stations of TRAFFIC typology in each of the three clusters. Bottom: distribution of PM10 (ug/m3) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 (ug/m3) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

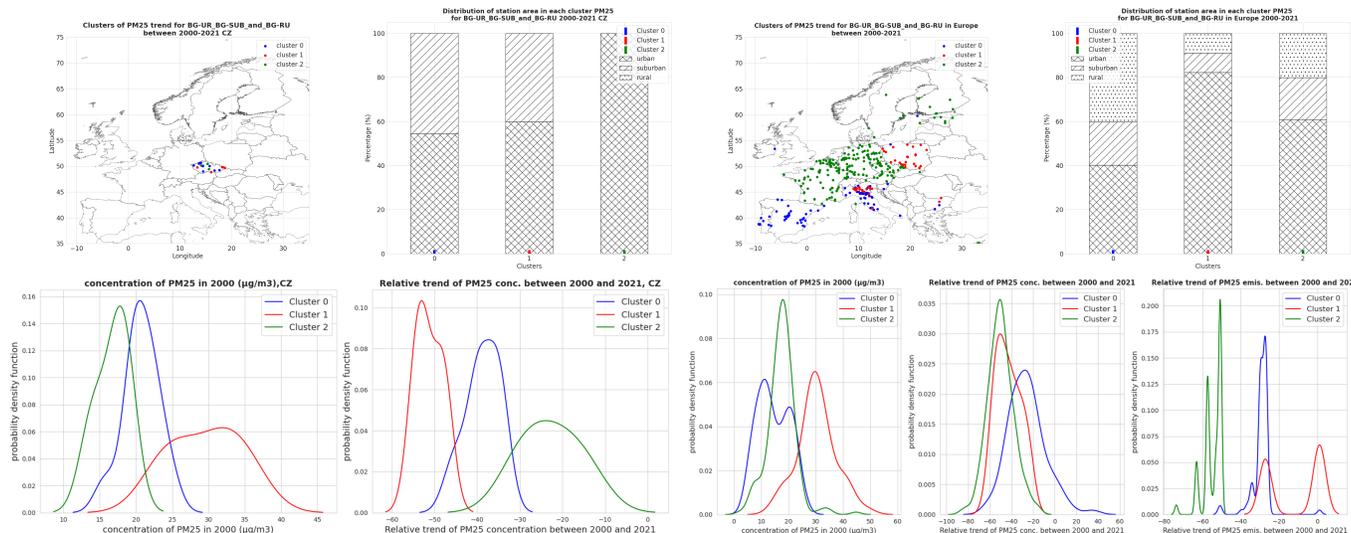

Figure A4.32: Clustering of the Czechia (left) and European-wide (right) trends of PM25 (ug/m3) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM25 (ug/m3) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM25 (ug/m3) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM25 emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

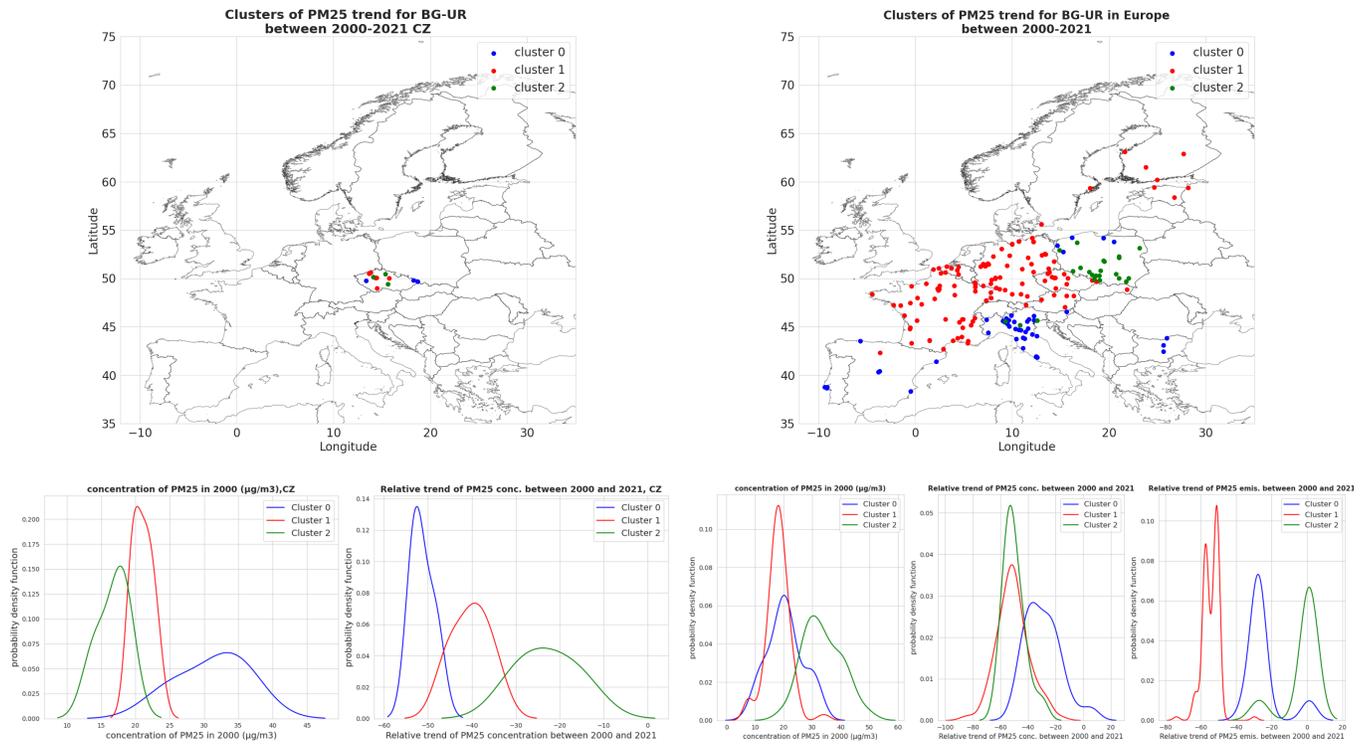

Figure A4.33: Clustering of the Czechia (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

6 Germany

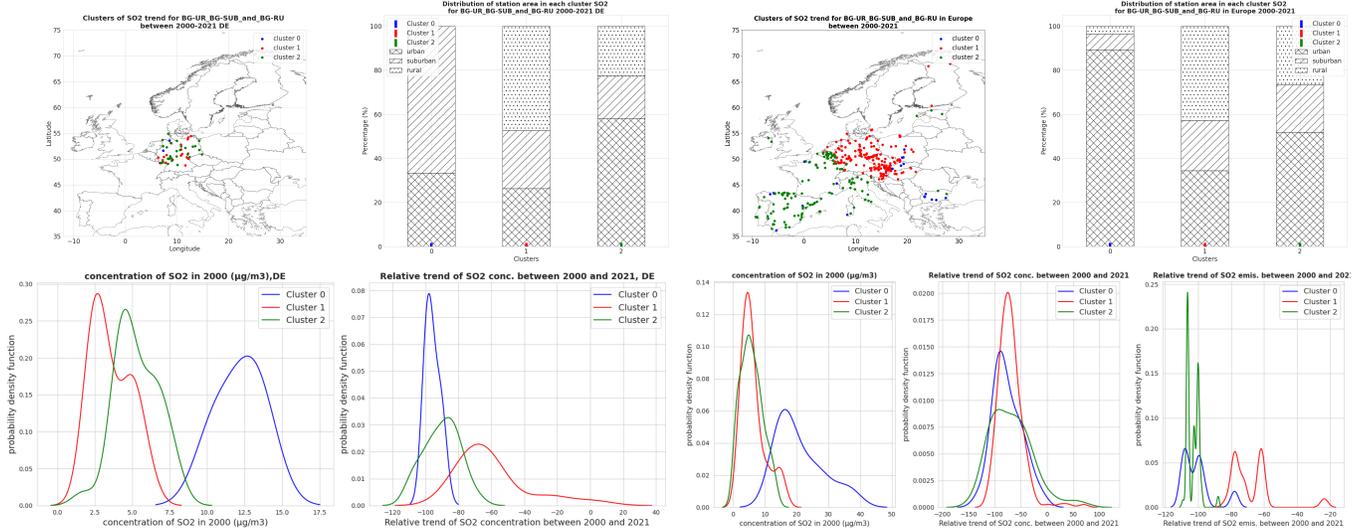

Figure A4.34: Clustering of the Germany (left) and European-wide (right) trends of SO₂ ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of SO₂ ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of SO₂ ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of SO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

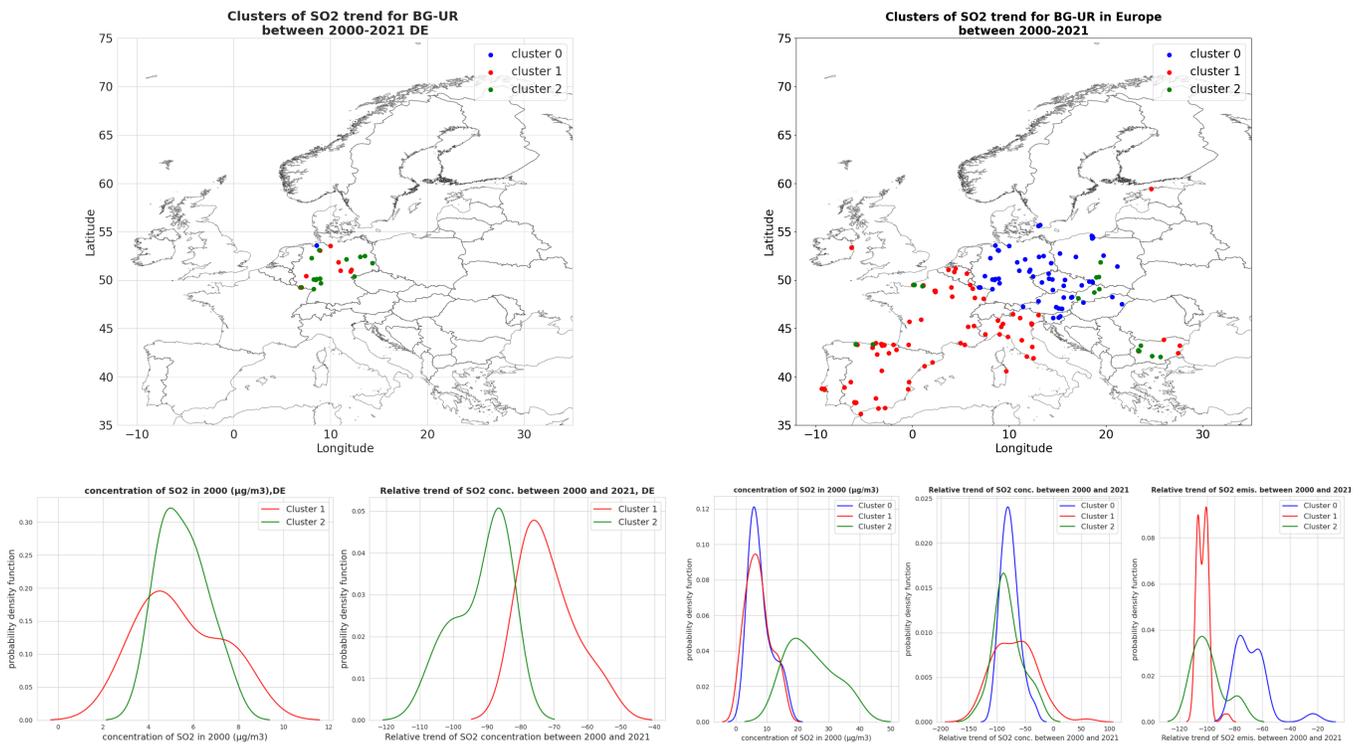

Figure A4.35: Clustering of the Germany (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

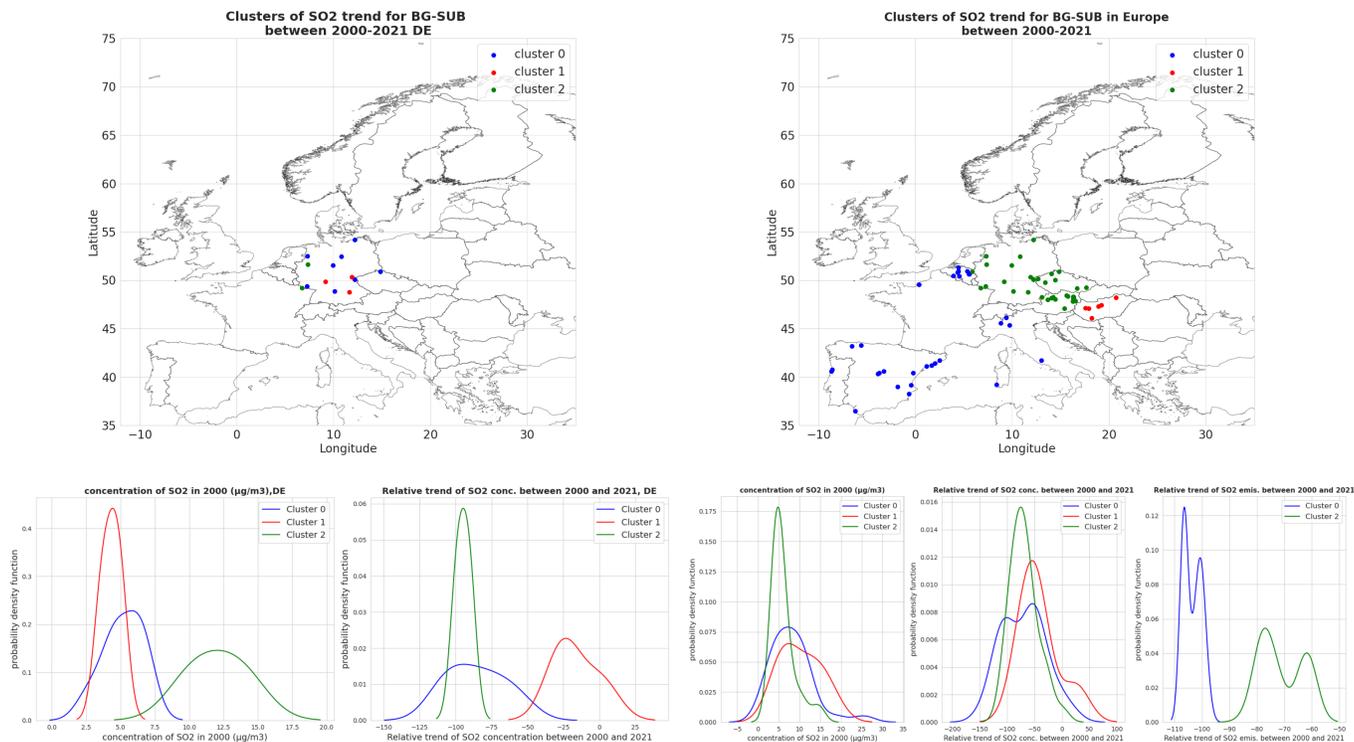

Figure A4.36: Clustering of the Germany (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-SUB typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

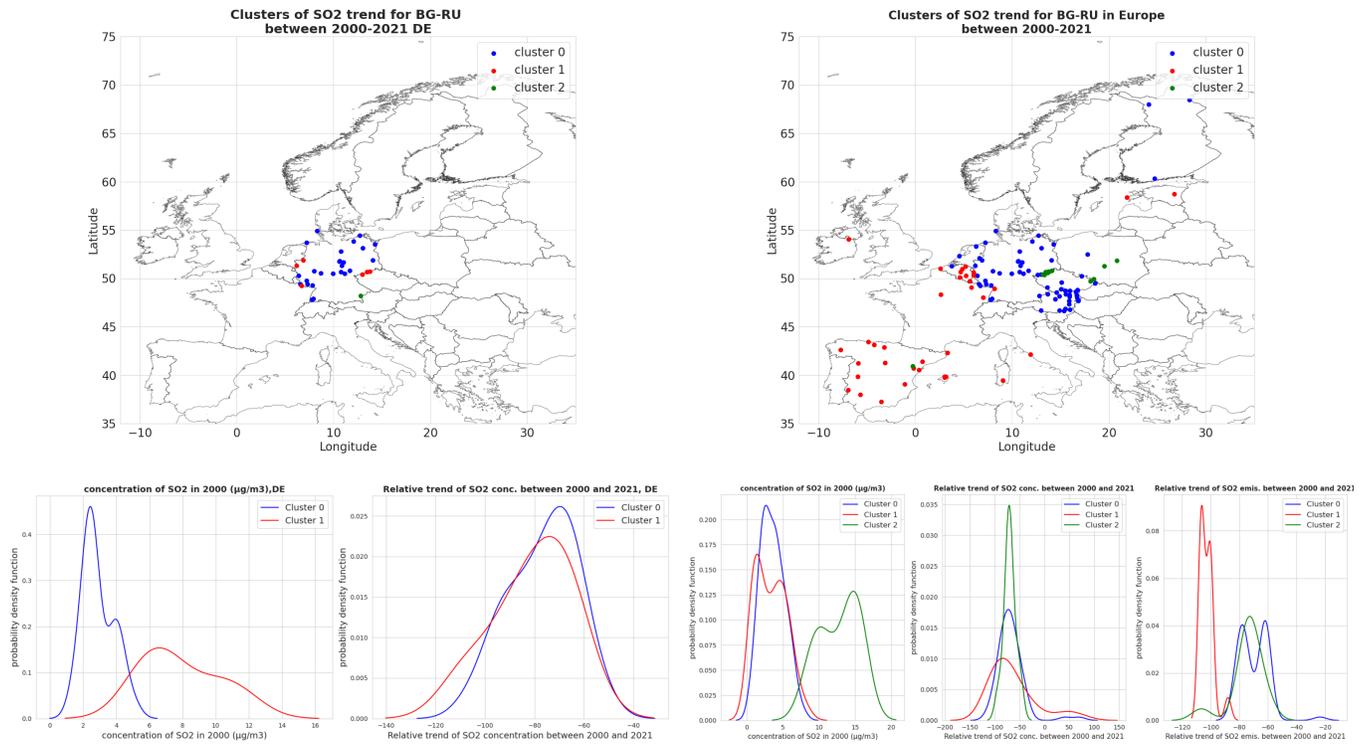

Figure A4.37: Clustering of the Germany (left) and European-wide (right) trends of SO₂ ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of SO₂ ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

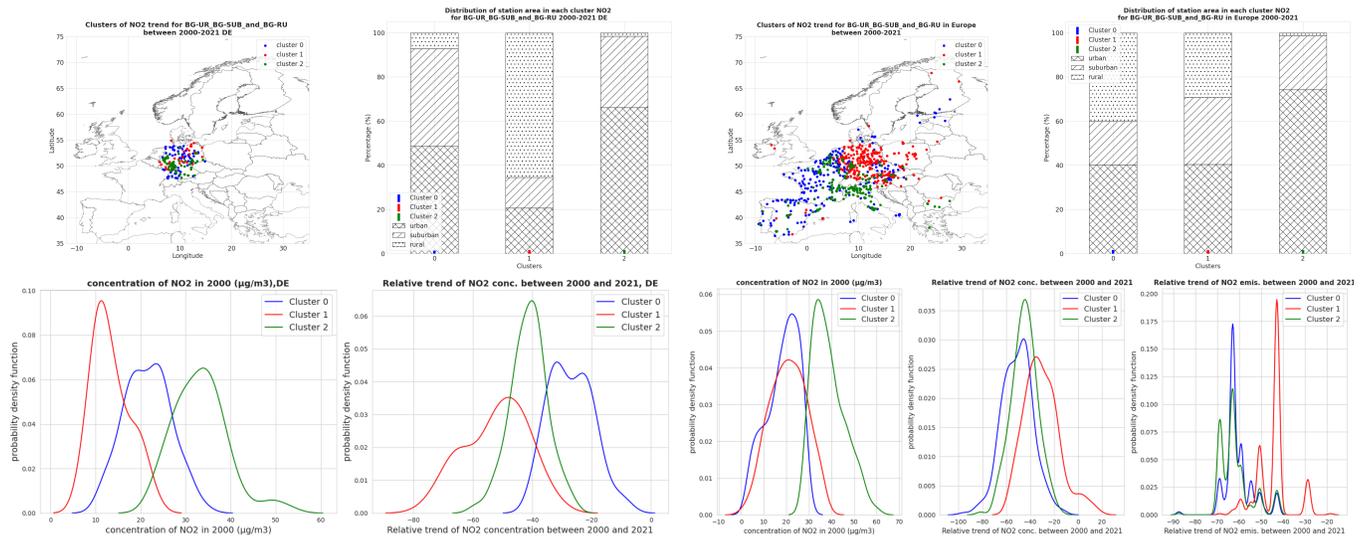

Figure A4.38: Clustering of the Germany (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right: distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

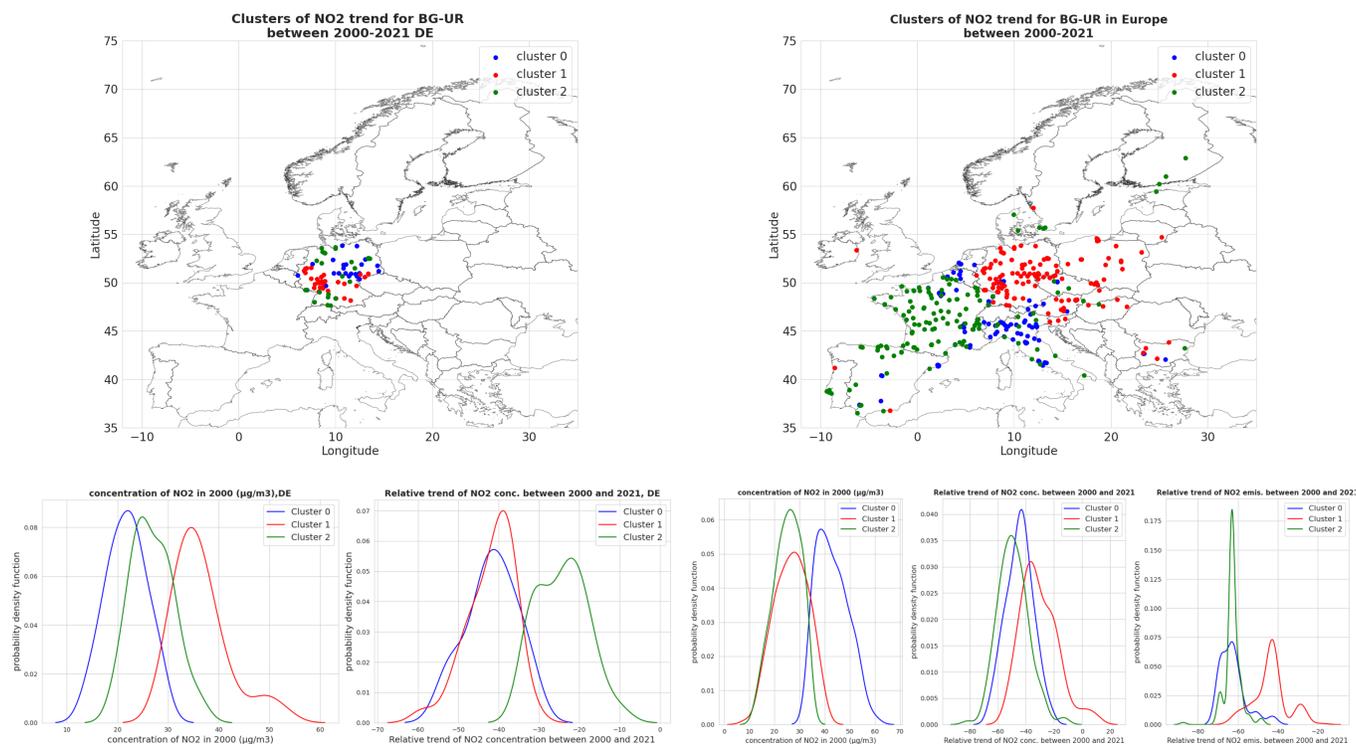

Figure A4.39: Clustering of the Germany (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

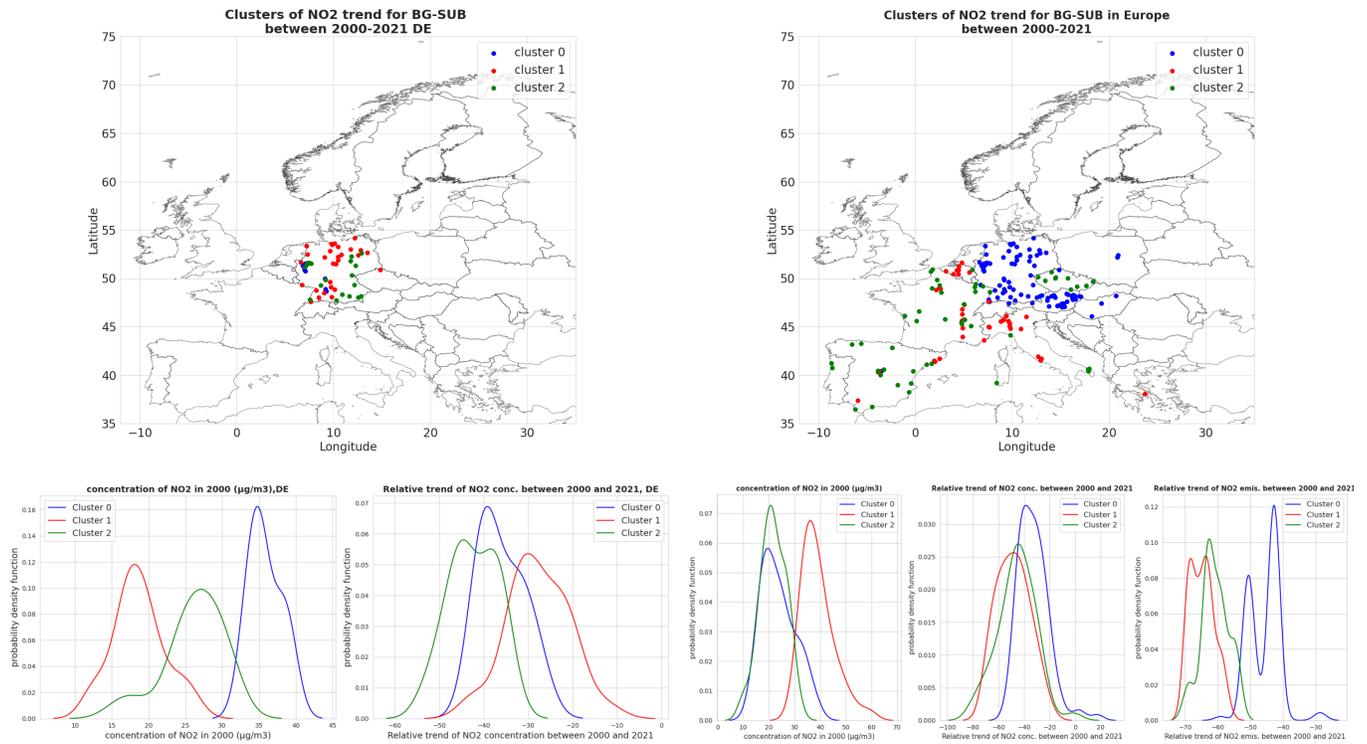

Figure A4.40: Clustering of the Germany (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-SUB typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

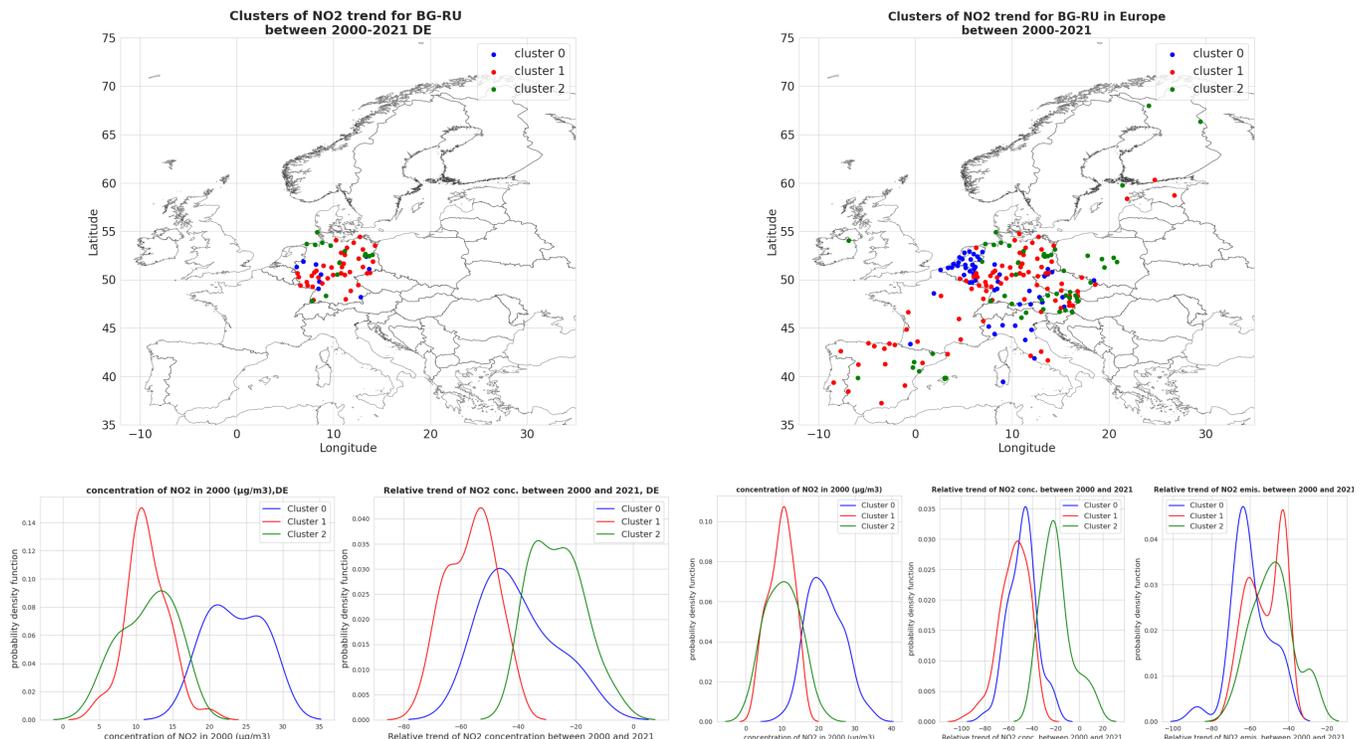

Figure A4.41: Clustering of the Germany (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

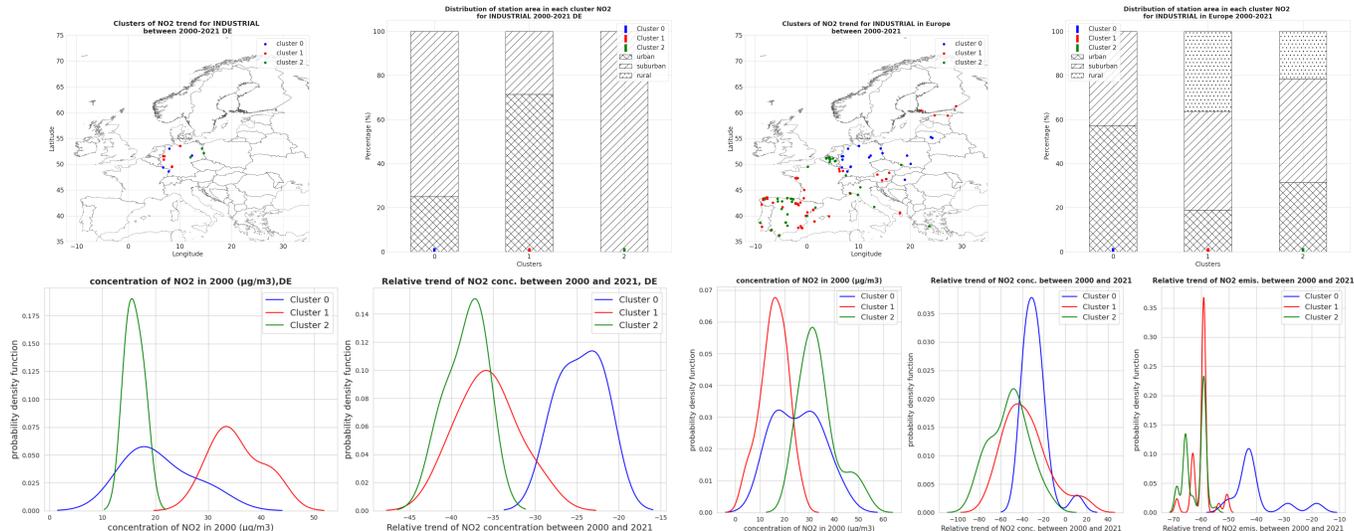

Figure A4.42: Clustering of the Germany (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Figure A4.103: Clustering of the Italy (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

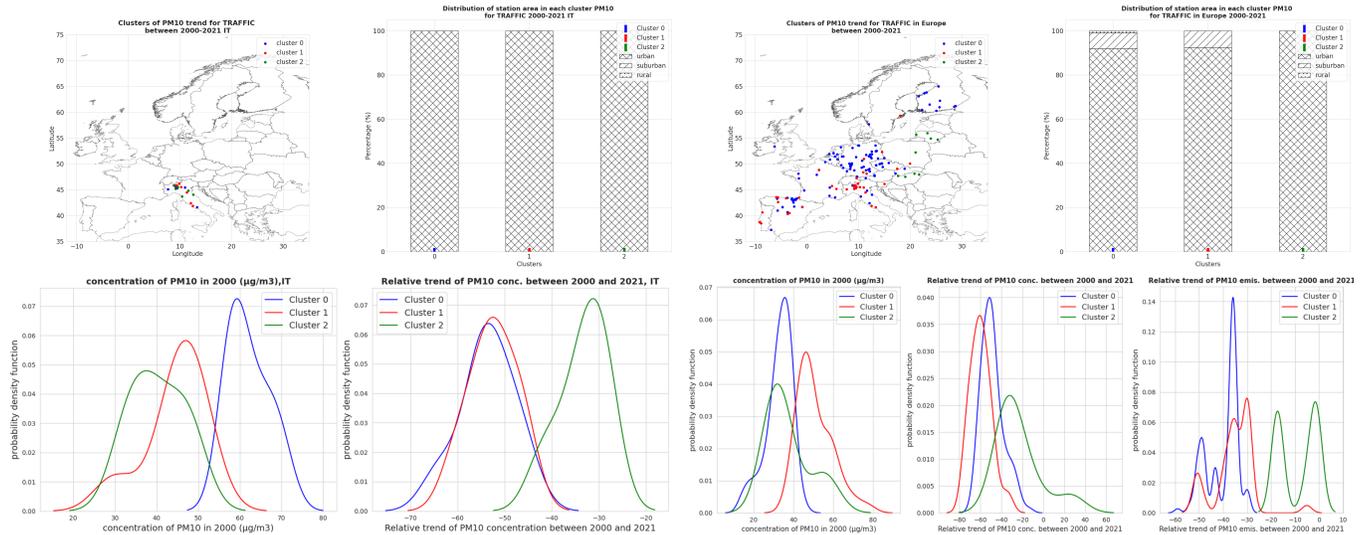

Figure A4.104: Clustering of the Italy (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of TRAFFIC typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

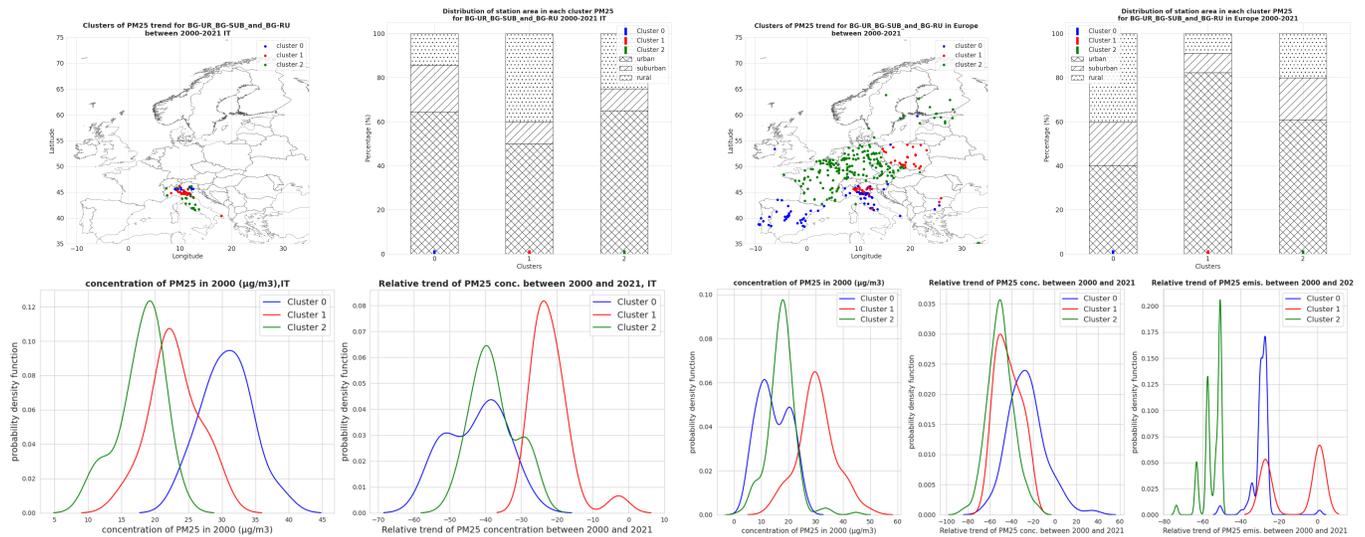

Figure A4.105: Clustering of the Italy (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM₂₅ emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

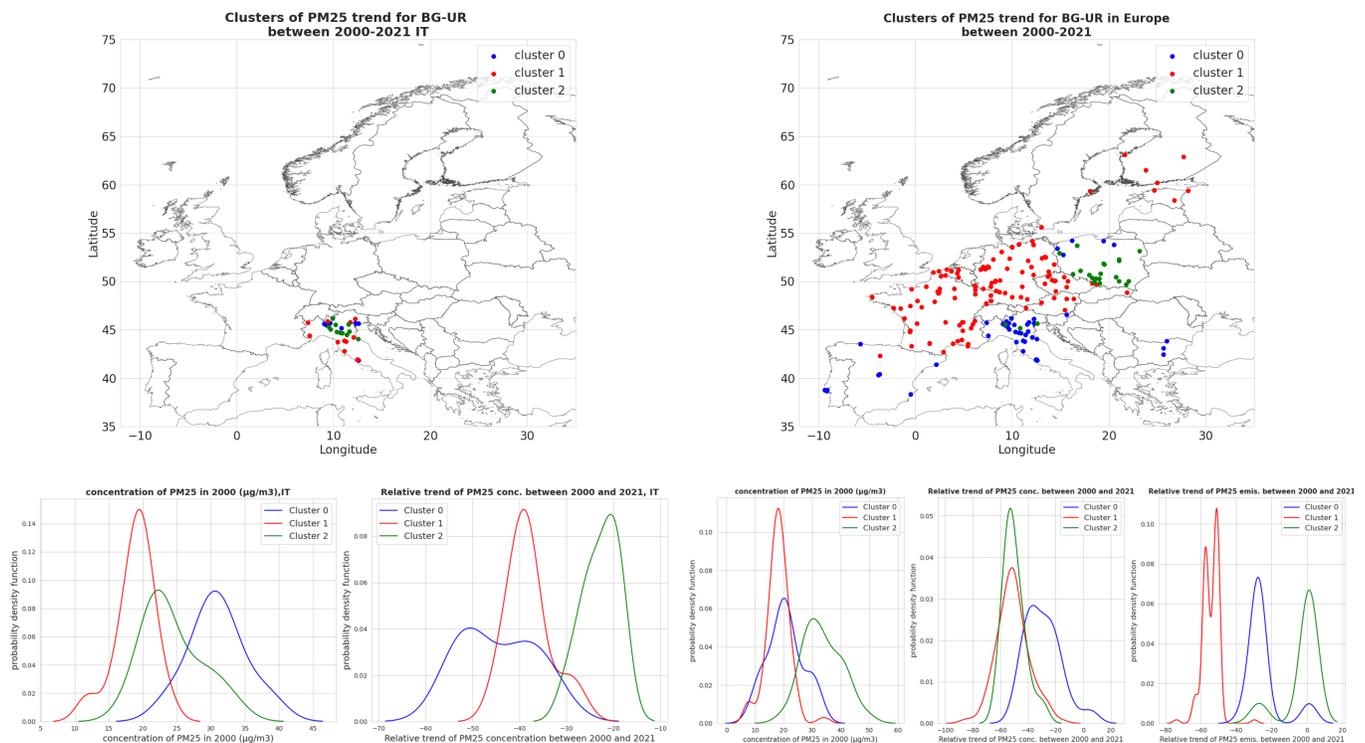

Figure A4.106: Clustering of the Italy (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

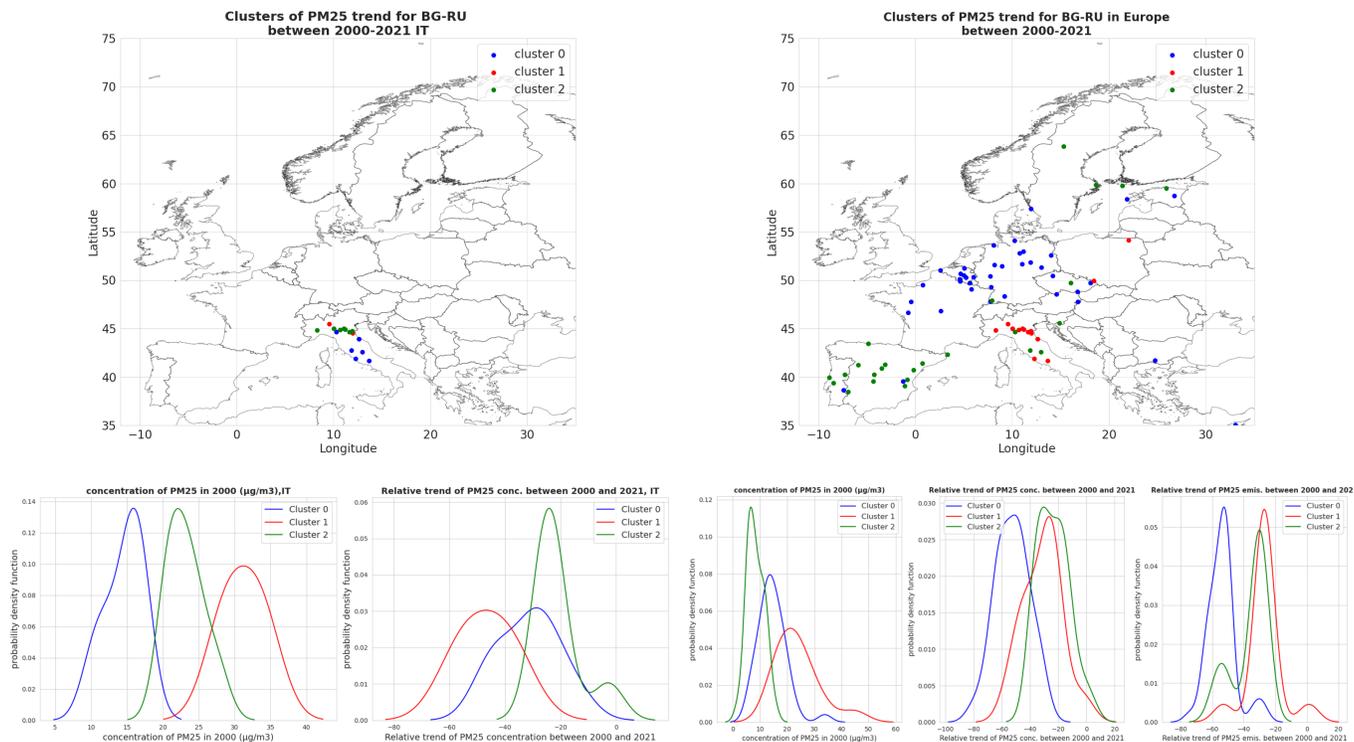

Figure A4.107: Clustering of the Italy (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

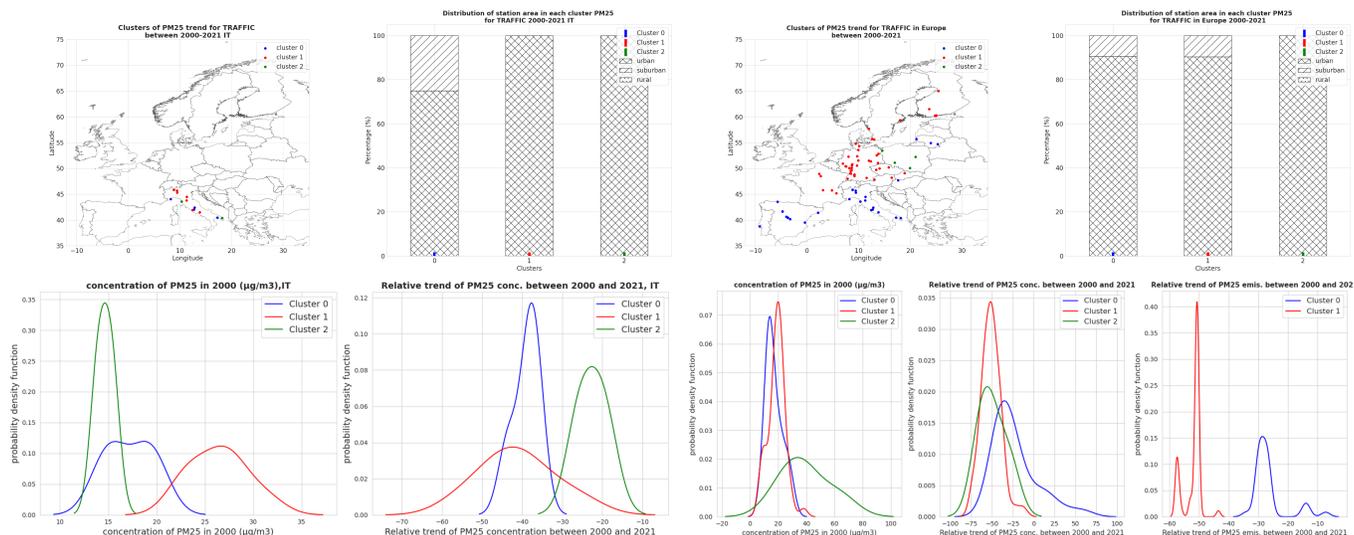

Figure A4.108: Clustering of the Italy (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of TRAFFIC typology in each of the three clusters. Bottom: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

17 Lithuania

The minimum number of stations required to assess the country-wise clustering is not met.

18 Luxembourg

The minimum number of stations required to assess the country-wise clustering is not met.

19 Republic of North Macedonia

The minimum number of stations required to assess the country-wise clustering is not met.

20 Netherlands

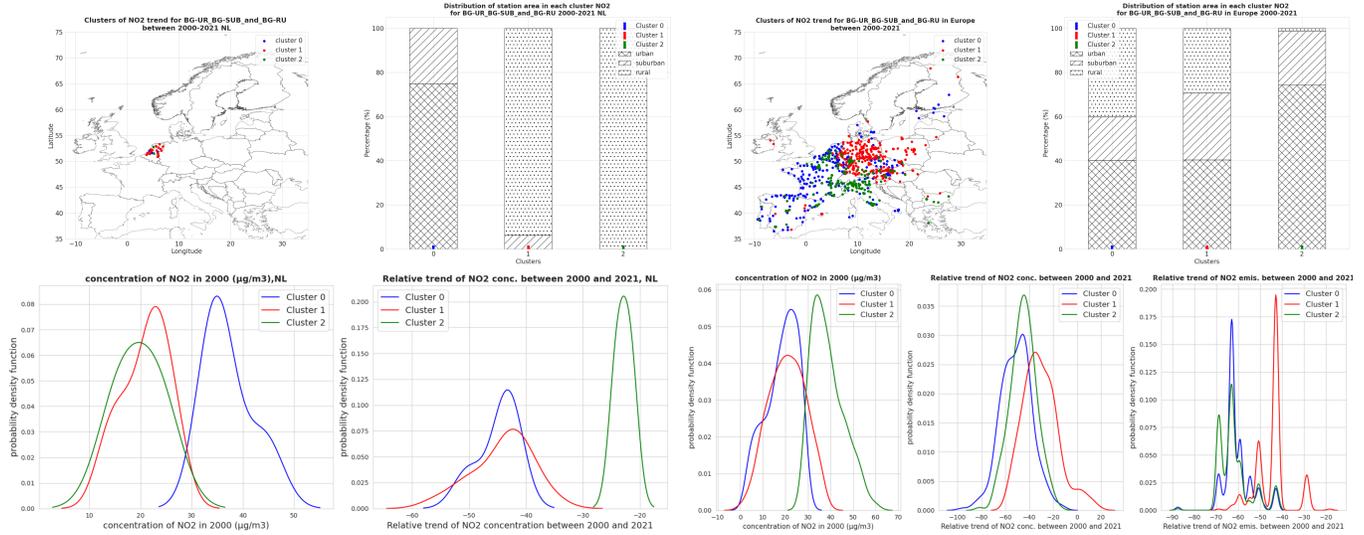

Figure A4.109: Clustering of the Netherlands (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

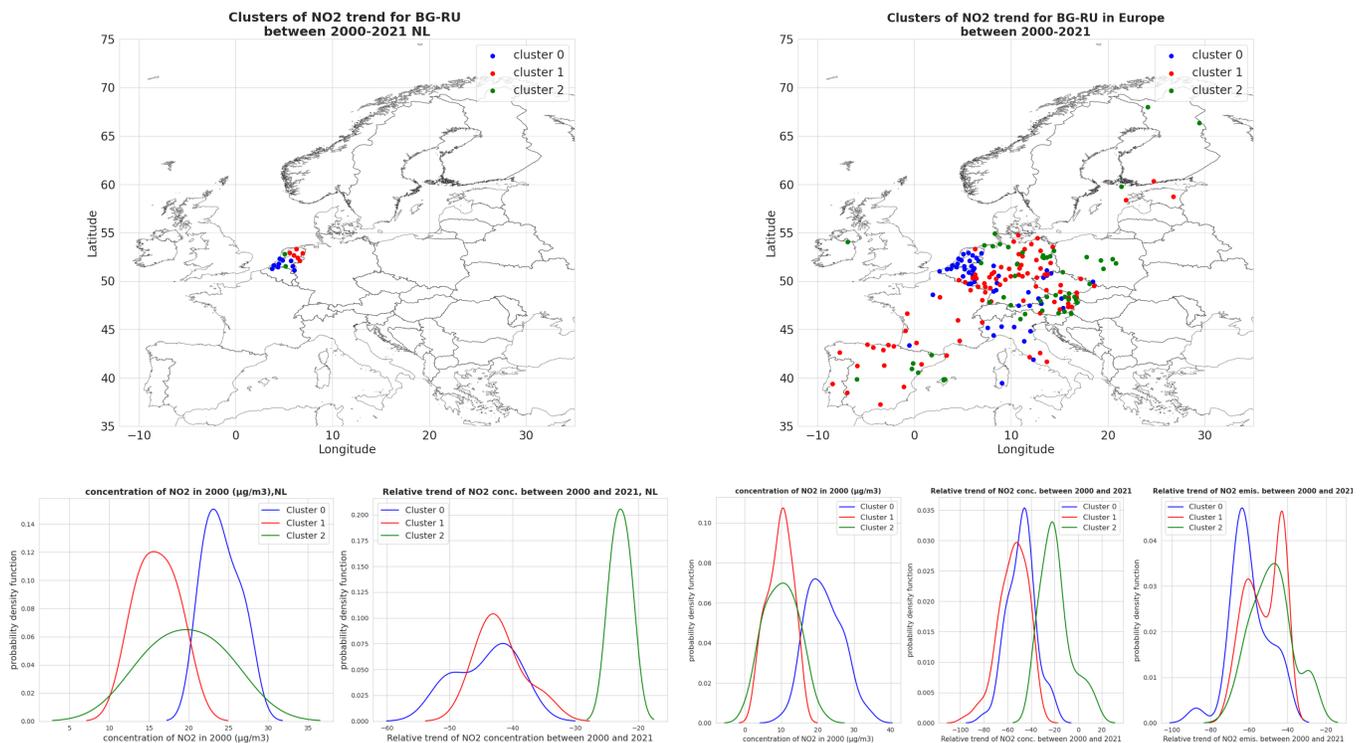

Figure A4.110: Clustering of the Netherlands (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

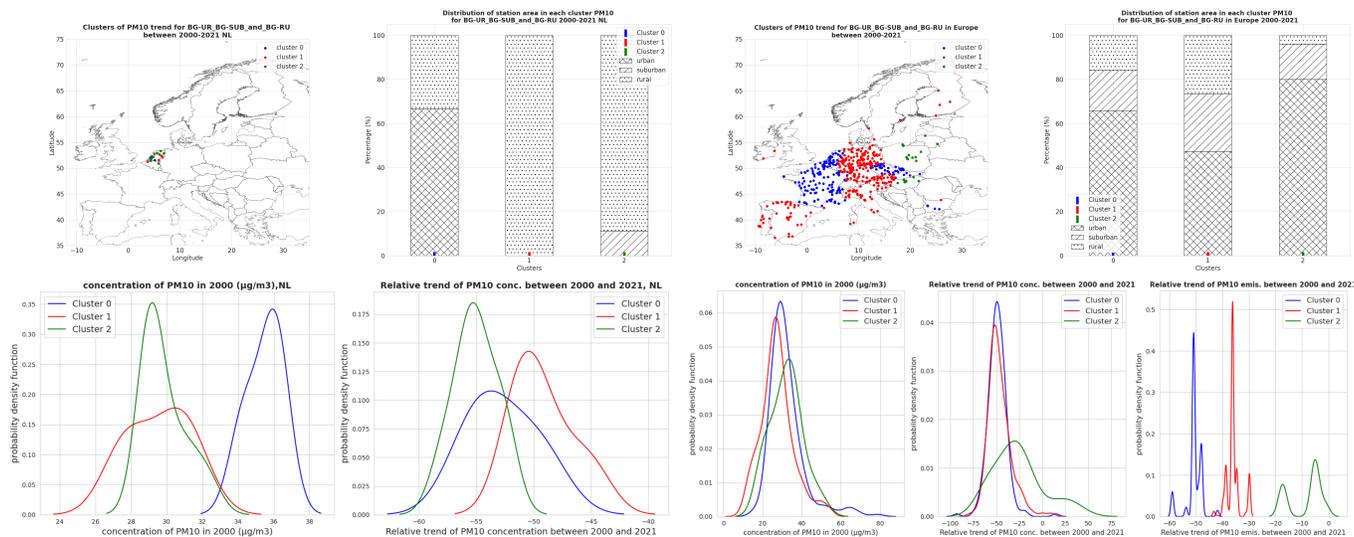

Figure A4.111: Clustering of the Netherlands (left) and European-wide (right) trends of PM₁₀ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM₁₀ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM₁₀ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM₁₀ emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

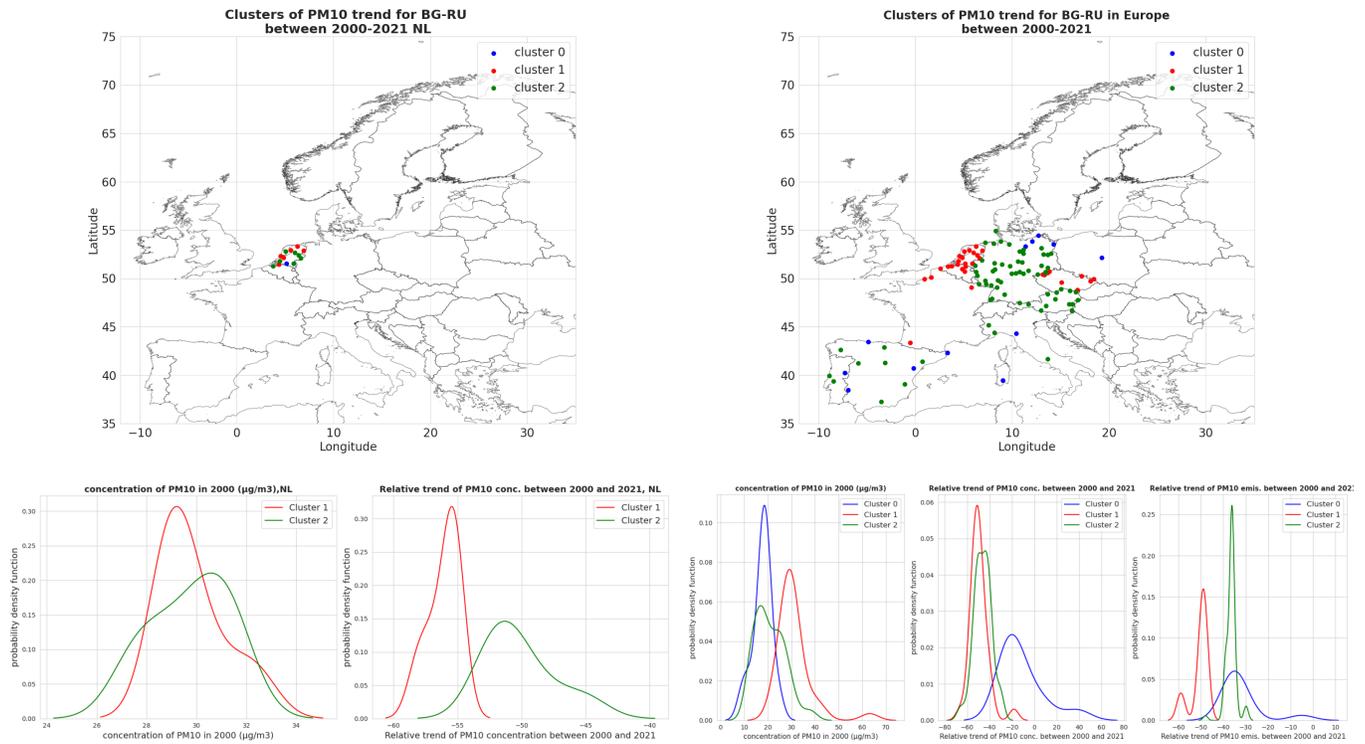

Figure A4.112: Clustering of the Netherlands (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-RU typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

21 Norway

The minimum number of stations required to assess the country-wise clustering is not met.

22 Poland

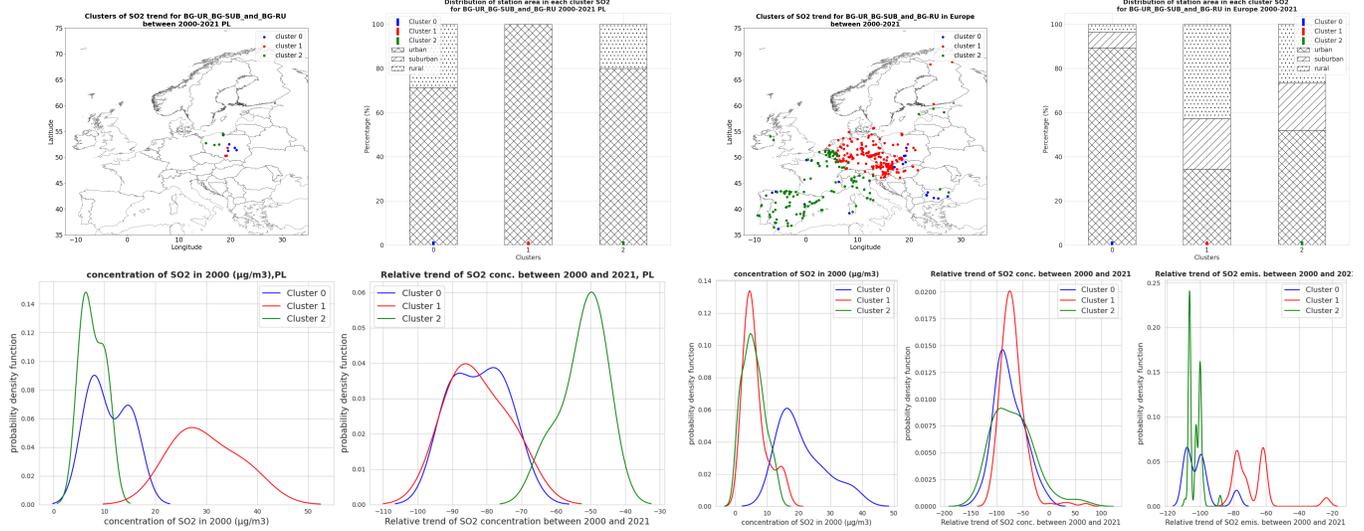

Figure A4.113: Clustering of the Poland (left) and European-wide (right) trends of SO₂ ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of SO₂ ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of SO₂ ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of SO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

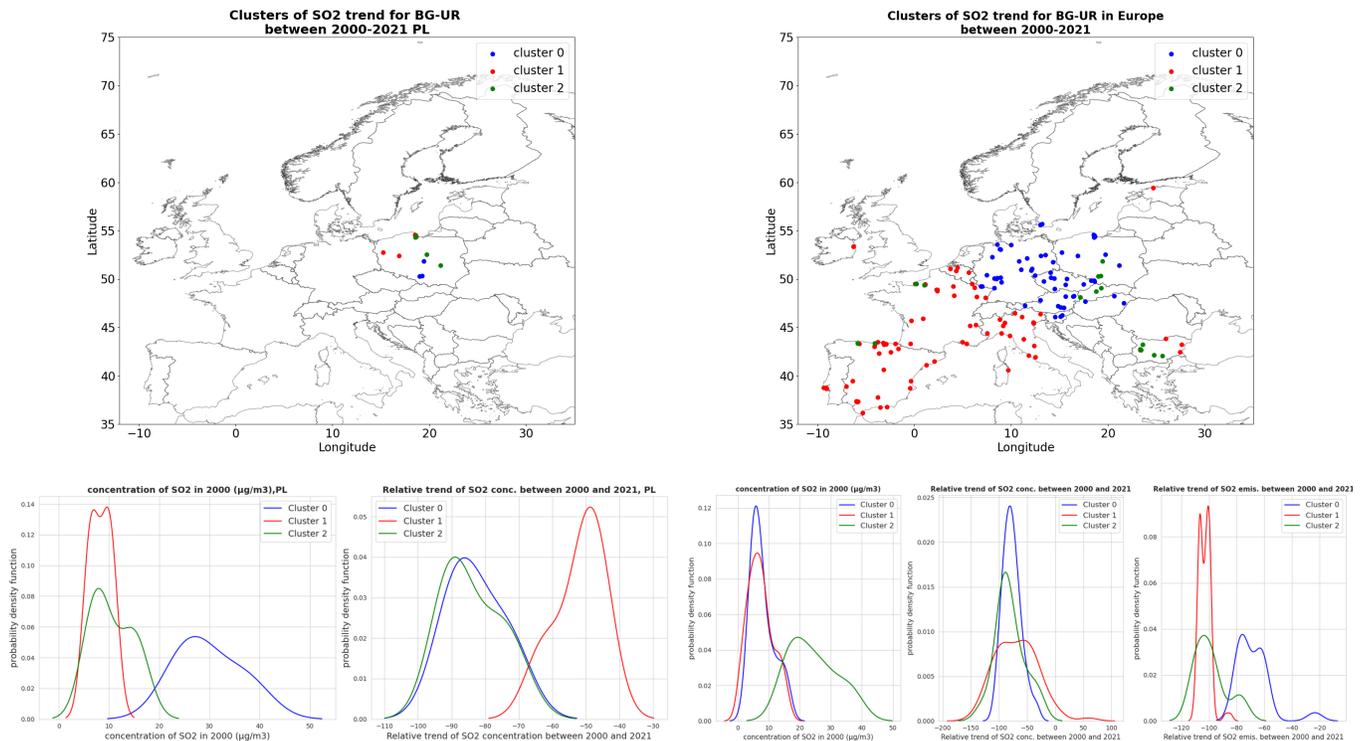

Figure A4.114: Clustering of the Poland (left) and European-wide (right) trends of SO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of SO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of SO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

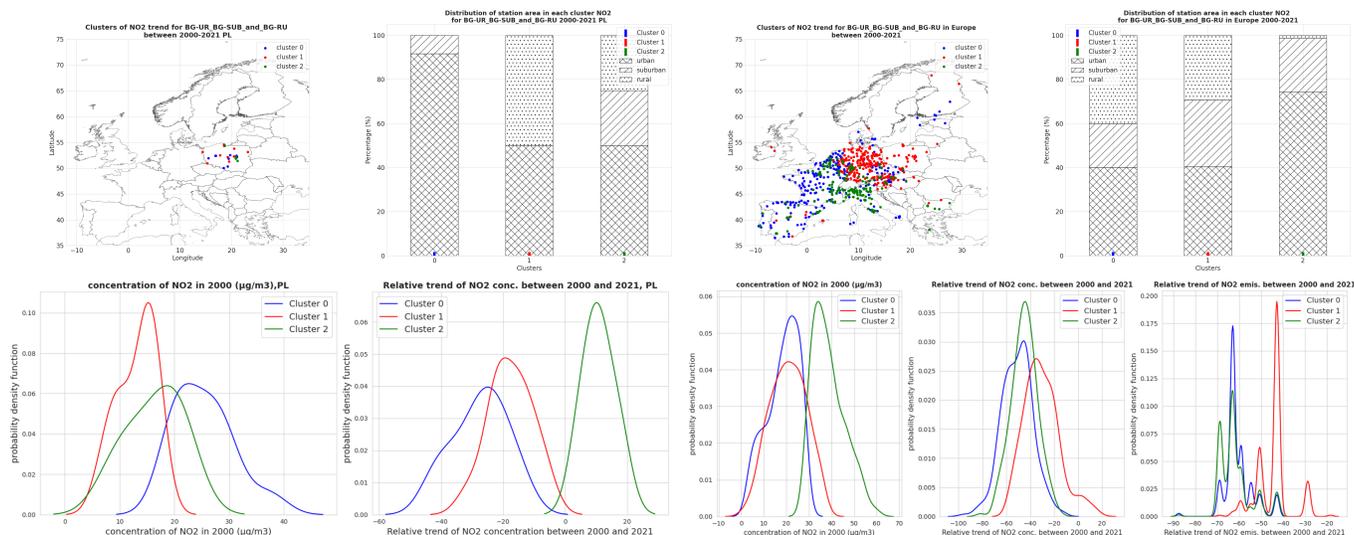

Figure A4.115: Clustering of the Poland (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

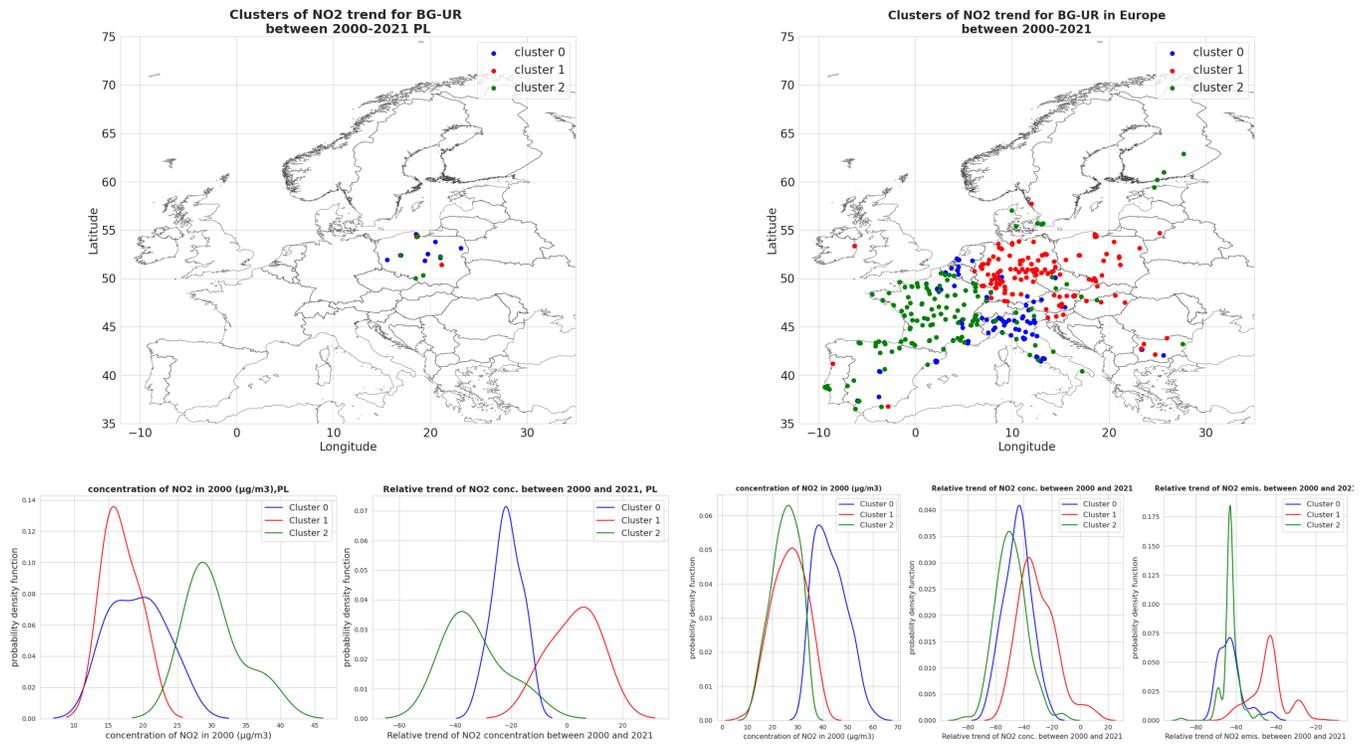

Figure A4.116: Clustering of the Poland (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

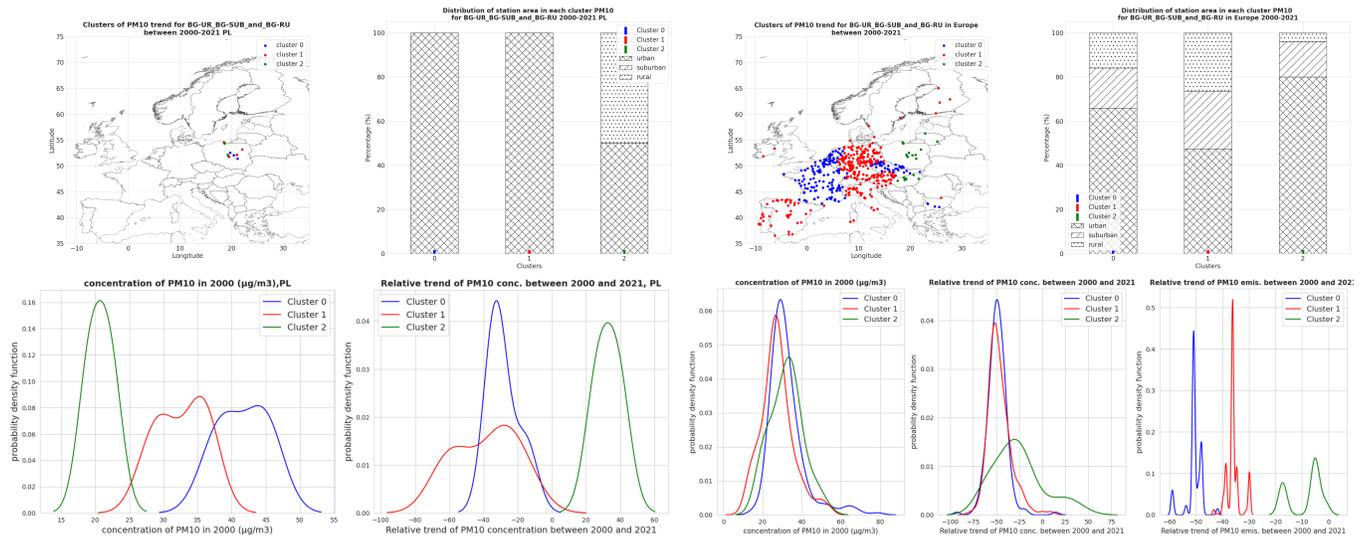

Figure A4.117: Clustering of the Poland (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right: distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM10 emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

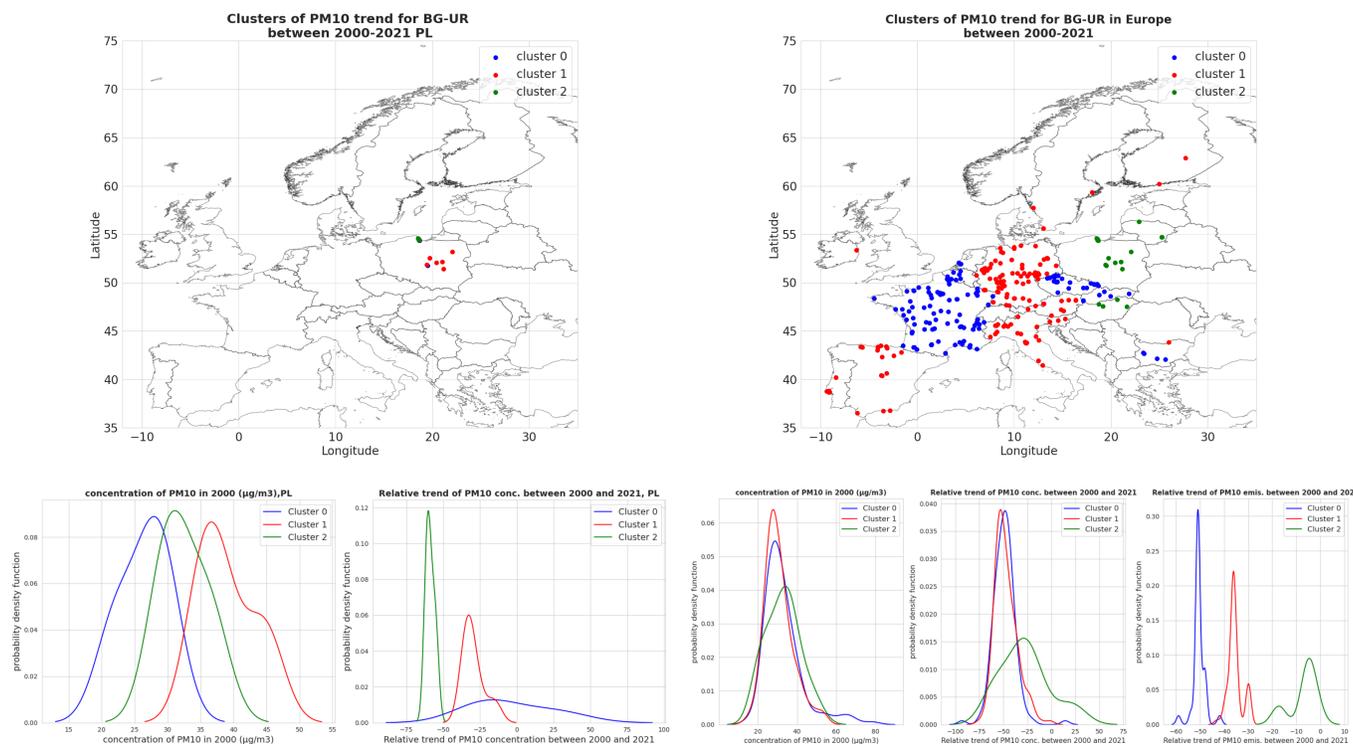

Figure A4.118: Clustering of the Poland (left) and European-wide (right) trends of PM10 ($\mu\text{g}/\text{m}^3$) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM10 ($\mu\text{g}/\text{m}^3$) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM10 ($\mu\text{g}/\text{m}^3$) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

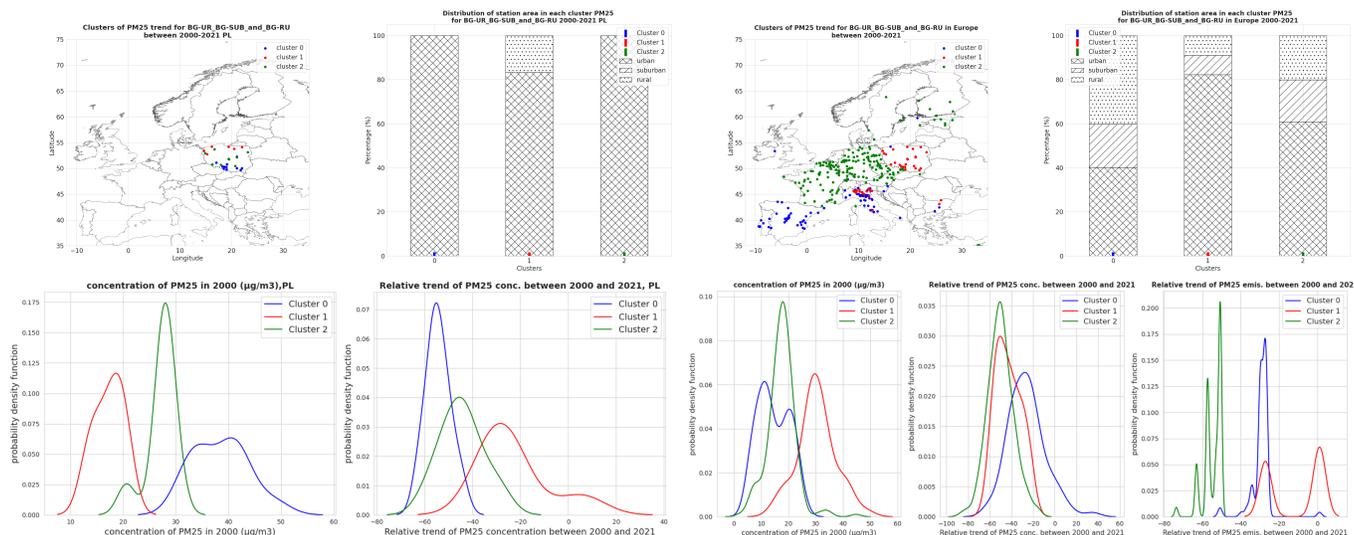

Figure A4.119: Clustering of the Poland (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM₂₅ emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

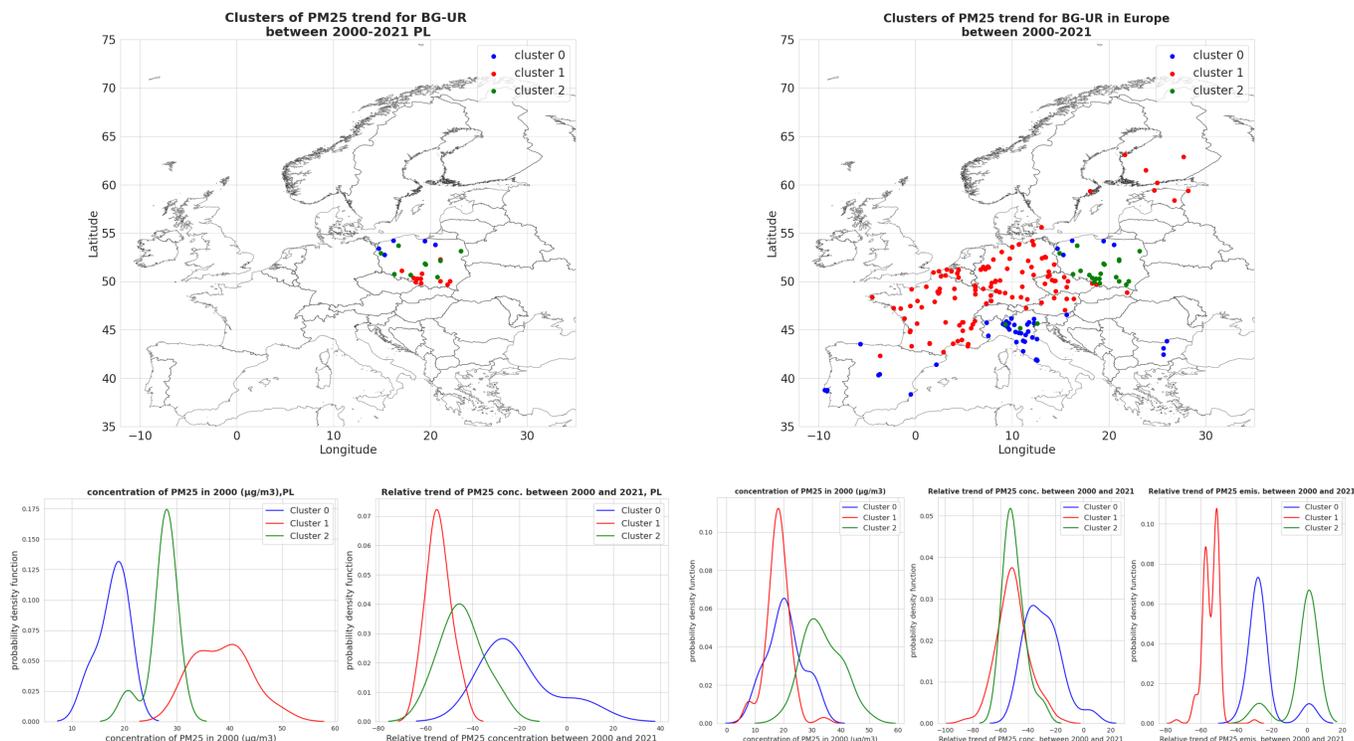

Figure A4.120: Clustering of the Poland (left) and European-wide (right) trends of PM₂₅ (ug/m³) trends applied to stations in Europe. Top: distribution of stations of BG-UR typology in each of the three clusters. Bottom: distribution of PM₂₅ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, and distribution of the relative trends of PM₂₅ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters.

23 Portugal

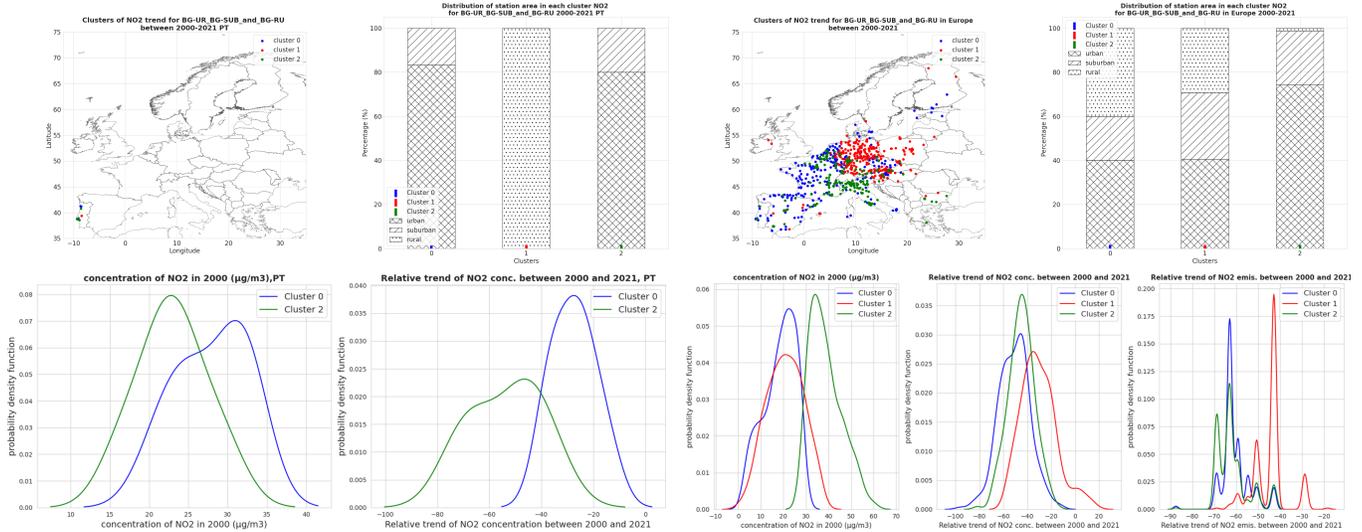

Figure A4.121: Clustering of the Portugal (left) and European-wide (right) trends of NO₂ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of NO₂ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of NO₂ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of NO_x emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

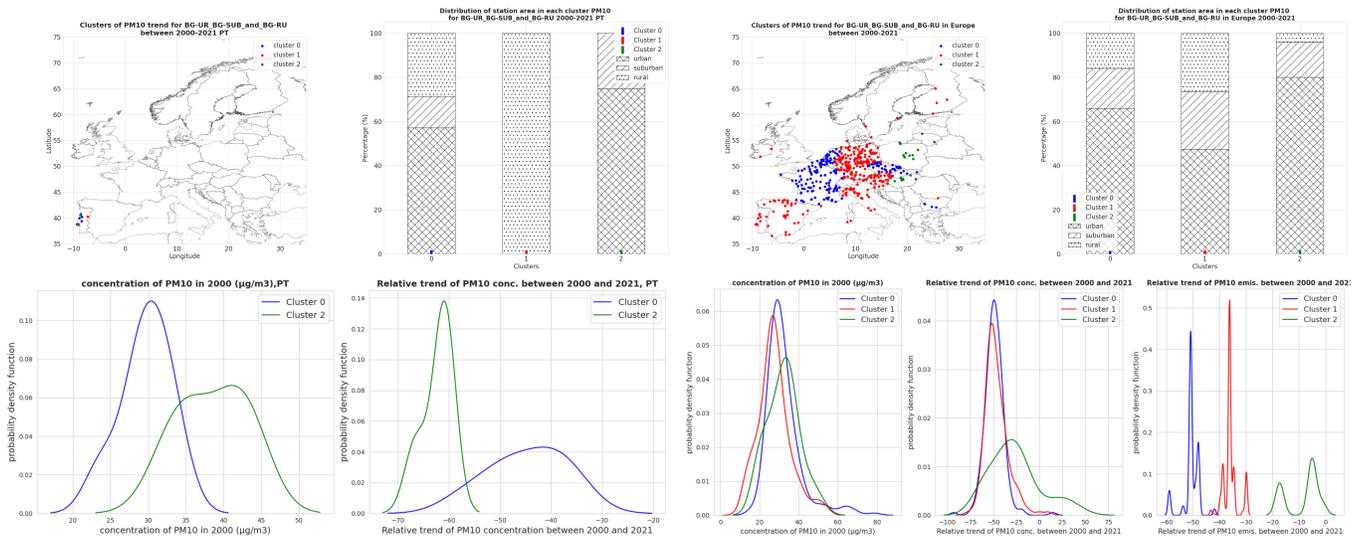

Figure A4.122: Clustering of the Portugal (left) and European-wide (right) trends of PM₁₀ (ug/m³) trends applied to stations in Europe. Top left: map of stations falling in classes 0,1,2. Top right distribution (%) of station. Top right: distribution (%) of stations of either urban, suburban, and rural background typology in each of the three clusters. Bottom, from left to right: distribution of PM₁₀ (ug/m³) concentrations estimated in 2000 at stations belonging to each of the three clusters, distribution of the relative trends of PM₁₀ (ug/m³) concentrations between 2000 and 2021 at stations belonging to each of the three clusters, distribution of the relative trends of PM₁₀ emissions between 2000 and 2021 in the country corresponding to stations of the three clusters.

24 Romania

The minimum number of stations required to assess the country-wise clustering is not met.

25 Sweden

The minimum number of stations required to assess the country-wise clustering is not met.

26 Slovenia

The minimum number of stations required to assess the country-wise clustering is not met.

27 Slovakia

The minimum number of stations required to assess the country-wise clustering is not met.
