

Port of Reggio Calabria (IT)

This fiche includes maps displaying the location of the sampling points (SPOs) around the port of Reggio Calabria (IT) with measurements of NO₂ and PM_{2.5} in 2023 (E1a validated data AQ e-Reporting). The tables include additional information on the annual mean concentrations of each SPO with available data (data coverage larger than 75%), distances of the SPOs from the port area, location of the SPO in one of the 8 wind sectors around the port (WS: N, NE, E, SE, S, SW, W, NW), population living in the WS within 10 km from the port, and trends of annual mean concentrations (2005-2023) when available. This information has been complemented with the EEA air quality annual maps (1 km x 1 km), covering the whole area around the port and showing in the boxplot the different levels concentrations over the port area compared to the surrounding region, including the weighted area means for the different land cover classes. The presented information is based only on SPOs reported to the EEA, additional SPOs or data may exist at national level.

Port of Reggio Calabria (IT)

Port area and NO₂ air quality SPOs around the port within 5 and 10 km

Port area and PM_{2.5} air quality SPOs around the port within 5, 10 and 20 km

Pozzoli, L., Gressent, A., Soares, J., Colette, A., Monge, S. & González Ortiz, A. (2025). Air quality around ports (Eionet Report – ETC HE 2024/12, version 2, <https://doi.org/10.5281/zenodo.17416089>).

Annual mean NO₂ concentrations in 2023

EEA air quality map (1 km x 1 km)

Concentrations over the port area compared to the surrounding region.
Coloured dots correspond to weighted area means for different land cover classes in the surrounding region.
